

# L<sup>A</sup>T<sub>E</sub>X Support For Monotype Imprint Shadow Font

Boris Veytsman\*

2012/08/03, v1.0

## Abstract

This package provides L<sup>A</sup>T<sub>E</sub>X support for the Monotype Imprint Shadow font. It has everything you need to typeset in this font - except the font itself.

## 1 Introduction

While such engines as `xetex` and `luatex` can use native system fonts, the installation base of `pdftex` is large enough to justify its continuing support with new fonts.

This package provides support files for the Monotype Imprint Shadow font. According to the Fontname scheme [1], this corresponds to the family `miih`. We provide the necessary font files—everything but the fonts.

## 2 Installation

First, you need to purchase the fonts themselves: the `pfb` files are *not* included in the package. We assume that the `pfb` file is called `ImpriMTSha.pfb`. If your `TEX` system is TDS-compliant, install the this file into `$TEXMFLOCAL/fonts/type1/monotype/imprintmtshadow`. Download <http://mirrors.ctan.org/install/fonts/psfonts/imprintmtshadow.tds.zip> and unzip this file in `$TEXMFLOCAL`. Add `+miih.map` to the configuration files of `dvips`, `pdftex` and your `dvi` previewer. Run `texhash` and `updmap` programs to update the configuration files and file names database.

The style `imprintmtshadow.sty` provides a number of commands for using the font family (see Section 3)

## 3 Using L<sup>A</sup>T<sub>E</sub>X Style

To use the package, add to the preamble of your document the usual incantation  
`\usepackage[<options>]{imprintmtshadow}`.

The package option `scaled=...` scales the font to the given scale.

The font can be selected in the usual way, for example

```
\fontfamily{miih}\selectfont
```

`\imprintmtshadowfamily`      Alternatively you can use a declaration `\imprintmtshadowfamily` and a command `\textimprintmtshadow` to set the family.

## 4 Implementation

### 4.1 Identification

We start with the declaration who we are. Most .dtx files put driver code in a separate driver file .drv. We roll this code into the main file, and use the pseudo-guard <gobble> for it.

```
1 {style}\NeedsTeXFormat{LaTeX2e}
2 {*gobble}
3 \ProvidesFile{imprintmtshadow.dtx}
4 {/gobble}
5 {style}\ProvidesClass{imprintmtshadow}
6 {miih-drv}\ProvidesFile{miih-drv.tex}
7 {miih-map}\ProvidesFile{miih-map.tex}
8 [2012/08/03 v1.0 Using Monotype Imprint Shadow font in LaTeX]
```

And the driver code:

```
9 {*gobble}
10 \documentclass{ltxdoc}
11 \usepackage{booktabs}
12 \usepackage{url}
13 \usepackage[tableposition=top]{caption}
14 \usepackage{hypdoc}
15 \PageIndex
16 \CodelineIndex
17 \RecordChanges
18 \EnableCrossrefs
19 \begin{document}
20 \DocInput{imprintmtshadow.dtx}
21 \end{document}
22{/gobble}
```

### 4.2 Fontinst Driver

This follows [2].

First, the preamble

```
23 {*miih-drv}
24 \input fontinst.sty
25 \substitutesilent{bx}{b}
```

Starting recording transforms:

```
26 \recordtransforms{miih-rec.tex}
```

We have only one font:

```
27 \transformfont{miih8r}{\reencodefont{8r}{\fromafm{ImpriMTSha}}}
```

There is no hook in `fontinst.sty` for writing our own preamble to .fd file. However, we need to add scaling commands to the preamble. OK, we will patch `fontinst`:

```
28 \fontinstcc
```

```

29 \def\fd_family#1#2#3{
30   \a_toks{#3}
31   \edef\lowercase_file{\lowercase{
32     \edef\noexpand\lowercase_file{#1#2.fd}}}
33   \lowercase_file
34   \open_out{\lowercase_file}
35   \out_line{\percent_char~Filename:~\lowercase_file}
36   \out_line{\percent_char~Created~by:~tex~\jobname}
37   \out_line{\percent_char~Created~using~fontinst~v\fontinstversion}
38   \out_line{}
39   \out_line{\percent_char~THIS~FILE~SHOULD~BE~PUT~IN~A~TEX~INPUTS~
40             DIRECTORY}
41   \out_line{}
42   \out_line{\string\ProvidesFile{\lowercase_file}}
43   \out_lline{[
44     \the\year/
45     \ifnum10>\month0\fi\the\month/
46     \ifnum10>\day0\fi\the\day\space
47     Fontinst~v\fontinstversion\space
48     font~definitions~for~#1/#2.
49   ]}
50   \out_line{}
```

Here is our patch:

```

51   \out_line{\string\expandafter\string\ifx\string\csname\space
52     MIIH@scale\string\endcsname\string\relax}
53   \out_line{\space\string\let\string\empty\string\@empty}
54   \out_line{\string\else}
55   \out_line{\space\string\edef\string\left_brace_char
56     *\[\string\csname\space MIIH@scale\string\endcsname]
57     \right_brace_char\percent_char}
58   \out_line{\string\fi\percent_char}
59   \out_line{}
```

End of the patch.

```

60   \out_line{\string\DeclareFontFamily{#1}{#2}{\the\a_toks}}
61   {
62     \csname #1-#2\endcsname
63     \out_line{}
64     \let\do_shape=\substitute_shape
65     \csname #1-#2\endcsname
66     \let\do_shape=\remove_shape
67     \csname #1-#2\endcsname
68   }
69   \x_glet{#1-#2}\x_relax
70   \out_line{}
71   \out_line{\string\endinput}
72   \close_out{Font~definitions}
73 }
74 \normalcc
```

Now we install the fonts. First T1

```
75 \installfonts
76 \installfamily{T1}{miih}{}
77 \installfont{miih8t}{miih8r,newlatin}{t1}{T1}{miih}{m}{n}{
78   <->\string\MIIH@scale}
79 \endinstallfonts
```

Then TS1

```
80 \installfonts
81 \installfamily{TS1}{miih}{}
82 \installfont{miih8c}{miih8r,textcomp}{ts1}{TS1}{miih}{m}{n}{
83   <->\string\MIIH@scale}
84 \endinstallfonts
```

And OT1

```
85 \installfonts
86 \installfamily{OT1}{miih}{}
87 \installfont{miih7t}{miih8r,newlatin}{ot1}{OT1}{miih}{m}{n}{
88   <->\string\MIIH@scale}
89 \endinstallfonts
```

And the end:

```
90 \endrecordtransforms
91 \bye
92 </miih-drv>
```

### 4.3 Fontmap Generation

This is a standard procedure [2]

```
93 /*miih-map)
94 \input finstmsc.sty
95 \resetstr{PSfontsuffix}{.pfb}
96 \adddriver{dvips}{miih.map}
97 \input miih-rec.tex
98 \donedrivers
99 \bye
100 </miih-map>
```

### 4.4 Style File

The scaling code is from the `helvet` package:

```
101 /*style)
102 \RequirePackage{keyval}
103 \define@key{MIIH}{scaled}[1.00]{%
104   \def\MIIH@scale{\#1}}
105 \def\ProcessOptionsWithKV#1{%
106   \let\@tempc\relax
107   \let\MIIH@tempa\empty
108   \ifx\@classoptionslist\relax\else
109     \for\CurrentOption:=\@classoptionslist\do{%
```

```

110      \@ifundefined{KV@#1@\CurrentOption}%
111      {}%
112      {%
113          \edef\MIIH@tempa{\MIIH@tempa,\CurrentOption,}%
114          \expandtwoargs\removeelement\CurrentOption
115          \unusedoptionlist\unusedoptionlist
116      }%
117  }%
118 \fi
119 \edef\MIIH@tempa{%
120     \noexpand\setkeys{#1}{%
121         \MIIH@tempa\optionlist{@currname.\@currext}%
122     }%
123 }%
124 \MIIH@tempa
125 \let\CurrentOption\empty
126 }
127 \ProcessOptionsWithKV{MIIH}
128 \AtEndOfPackage{%
129     \let\unprocessedoptions\relax
130 }

```

Some new commands:

```

131 \DeclareRobustCommand\imprintmtshadowfamily{\fontfamily{miih}\selectfont}
132 \DeclareTextFontCommand{\textimprintmtshadow}{\imprintmtshadowfamily}
133 </style>

```
