Abstract

This package provides a convenient ArabTeX-like user-interface for typesetting languages using the Arabic script in X_{EL}A_TE_X, with flexible access to font features. Input in ArabTeX notation can be set in three different vocalization modes or in roman transliteration. Direct UTF-8 input is also supported. Since most of the ‘real work’ – namely parsing and converting ArabTeX input to Unicode – is done at the level of TECKit mappings, ArabX_{EL}A_TE_X is really performant.

Contents

1 Introduction

Since the early 1990s,¹ T_EX users who wished to typeset in Arabic script have relied on Klaus Lagally’s excellent ArabTeX system.² While ArabTeX’s overall qualities and Lagally’s masterful T_EX-programming abilities are undeniable, the system can hardly hide its 15-odd years of existence. Or to state it otherwise, it is now slowly becoming an archaic piece of software (which as a historian who has used ArabTeX for more than eleven years I find a sad thing to admit). First of all, it is monolithic and idiosyncratic, in the sense that everything – from parsing the input encoding, to doing contextual analysis, to assembling all elements of the script and placing them on the page from right to left, in defiance of T_EX’s natural logic – is taken care of by means of T_EX macro programming. Thus before the availability of relatively fast Pentium processors, ArabTeX was really slow, but this is less of an issue nowadays. Another disadvantage is that one is inexorably bound to use the custom Naskh font, which without being necessarily ugly does not meet the standards of fine typesetting. Finally, the collection of very sophisticated T_EX code that constitutes the ArabTeX package is not documented at all, which means that even though it is now licensed under the LPPL, its internals are extremely difficult to understand in depth. (It is only fair to state, however, that Prof. Lagally has been extremely responsive to ideas, suggestions and wishes by users in the past).

After completion of the initial alpha version of ArabX_{EL}A_TE_X, I came across the package *Arabi* by Youssef Jabri on CTAN.³ This is a pure LaTe_X/Babel approach to Arabic typesetting which makes use of TFM hackery (by means of complex sequences

¹This introduction reflects the state of things in 2007 when ArabX_{EL}A_TE_X was initially released.

²<ftp://ftp.informatik.uni-stuttgart.de/pub/arabtex/arabtex.htm>. Version 2.00 was released in April 1992 and version 3.00 in November of the following year. The latest stable version (dated 2 July 2006) is 3.11s. Since version 3.02 the Hebrew language is also supported.

³<http://www.ctan.org/tex-archive/language/arabic/arabi/>

of ligature rules) to provide custom contextual analysis for individual fonts. Thus the `Arabi` only works in combination with the fonts for which support is built in the package.

With the availability of Jonathan Kew’s `XeTEX`, users can now rely on a very up-to-date typesetting engine based on the integration of ε -`TEX`, Unicode, and modern font-rendering technology, without the complex hassle of font installation.⁴

2 Description

The `ArabXeTEX` package consists of a set of `TECkit`⁵ mappings for converting internally from `ArabTEX`’s ASCII input convention to Unicode, and a `LATEX` style file (`arabxetex.sty`) that provides a convenient user interface for typesetting in those languages. For details on `ArabTEX` and its input convention the reader is referred to Lagally’s detailed manual.⁶ `ArabXeTEX` introduces several additions, and a few minor modifications, to `ArabTEX`’s conventions. These are documented in tabular form in Section 4. `ArabXeTEX` relies on the package `bidi` which contains the macros necessary for bidirectional typesetting.

Languages supported at present are the same as in `ArabTEX`, namely: Arabic, Maghribi Arabic, Farsi (Persian), Urdu, Sindhi, Kashmiri, Ottoman Turkish, Kurdish, Jawi (Malay) and Uighur. `ArabXeTEX` adds support for several additional Unicode characters, so that some more languages are probably supported de-facto as well (such as Western Punjabi).

2.1 The `ArabTEX` input encoding

Why would one need to type those languages by means of an old-fashioned ASCII representation? Native speakers have access to keyboards that allow to input them directly in Unicode, while non-native scholars who need to type them can use keymaps or keyboard utilities to achieve the same, so why bother? An expert in Arabic mathematical linguistic and author of the Perl module `Encode::Arabic::ArabTEX`, Otakar Srmž, has this to say about the virtues of `ArabTEX` ASCII encoding:⁷

“`ArabTEX` is an excellent extension to `TEX/LATEX` designed for typesetting the right-to-left scripts of the Orient. It comes up with very

⁴<http://xetex.sourceforge.net>.

⁵<http://scripts.sil.org/TECkit>

⁶<http://129.69.218.213/arabtex/doc/arabdoc.pdf>

⁷<http://search.cpan.org/~smrz/Encode-Arabic/lib/Encode/Arabic/ArabTeX.pm#DESCRIPTION>. See also <http://ufal.mff.cuni.cz/~smrz/ICFP2006/icfp-encode.pdf>.

intuitive and comprehensible lower ASCII transliterations, the expressive power of which is even better than that of the scripts.”

There are indeed several advantages in using ArabTeX input convention for typesetting in the Arabic script, besides ease and legibility. First it is possible and even trivial to switch between a representation of the data in the Arabic script and its romanized transliteration, without having to modify it. Second, despite the increasing availability of good Unicode editors that support bidirectionality, editing (La)TeX source files with bidirectional content can be a real pain, for it leads to confusion and distraction. Also, with complex multi-layer documents such as critical editions, where footnotes and annotations abound, the advantage of dealing with a plain ASCII encoding cannot be overstated. Finally, such an input convention allows far greater control of typographical details.

3 Usage

\textarab	For short insertions (say within a LR text), use \text<language>[option]{...}
\textfarsi etc.	where <language> is one of the following (alternative names are given in brackets): <ul style="list-style-type: none">• arab (arabic),⁸• farsi (persian),• urdu,• sindhi,• pashto,• ottoman (turk),• kurdish,• kashmiri,• malay (jawi), and• uighur.
\begin{arab}	For typesetting whole paragraphs in Arabic script, use
\begin{farsi} etc.	\begin{<language>}[option] ... \end{<language>}

Most languages can be typeset in one of four modes: non-vocalized, vocalized, fully-vocalized, and transliterated, exactly as in ArabTeX, and these are switched by

⁸Since the command \arabic is already defined in L^AT_EX, we chose the environment **arab** and the command \textarab instead, but the equivalent environment **Arabic** and the command \textarabic are also available.

means of the options `novoc`, `voc`, `fullvoc` and `trans`, respectively. Note that Kurdish and Uighur only have one vocalization mode. The mode can be determined either globally as an option to the `arabxetex` package, or as a local option of either the `\text{<language>}` commands or `\begin{<language>} ... \end{<language>}` environments. When no option is set locally, the global option is chosen. The default global option is always *non-vocalized* mode.

There is also an option `utf` for input in plain UTF-8 encoding. Note that it is also possible to mix ArabTeX input convention and UTF-8 characters, since the latter will not be affected by the font-mapping (except of course in transliteration mode, unless your roman font also contains Arabic characters). There are also advantages of choosing an ArabTeX mapping (*i.e.*, one of the `novoc`, `voc` and `fullvoc` modes) even with UTF-8 encoding, as it provides easy access to special glyphs and some useful features. See further below.

`\text{LR}` Left-to-right insertions in Latin script within an Arabic environment can be made by means of the command `\text{LR}{...}`. Emphasis in Arabic is traditionally indicated by overlining the text, and this can be achieved with the command `\aemph`:⁹

```
\begin{arab}[novoc]
    mi_tAl: \aemph{45} darajaT
\end{arab}
```

مثال: درجة ٤٥

3.1 Font setup

`\arabicfont` ArabX_ET_EX requires the user to define an `\arabicfont` in the preamble. The recommended procedure, by means of `fontspec`, is to define it as follows:

```
\newfontfamily\arabicfont[Script=Arabic]{<fontname>}
```

If not, then a warning is issued and ArabX_ET_EX will attempt to load the font **Amiri** (by Khaled Hosny).¹⁰ You can also define specific fonts for all other languages, by similarly defining `\<language>font`, such as for example:

```
\newfontfamily\urdufont[Script=Arabic]{Hussaini Nastaleeq}
```

⁹This macro makes use of the mathematical command `\overline`, which explains why `arabxetex` requires the `amsmath` package. I welcome any suggestion that would make it possible to circumvent this dependency by emulating `\overline` directly.

¹⁰Available from <http://www.amirifont.org>. Prior to version 1.2.0, the default font was **Scheherazade** (designed by Bob Halissy and Jonathan Kew of SIL International), available from <http://scripts.sil.org/ArabicFonts>. For typesetting Sindhi and Kashmiri, the font **Lateef**, available at the same place, is also recommended.

So for example if the `\texturdu` command or the `urdu` environment is used, Arab \TeX will use the `\urdufont` if it is defined, and the `\arabicfont` if not. In the same manner one can define `\maghribifont`, `\ottomanfont`, `\uighurfont`, etc.

3.2 Examples

3.2.1 Contextual analysis of *hamza*

As with Arab \TeX , a contextual analysis of the input encoding is performed (at the font-mapping level) to automatically determine the carrier of the *hamza*, as illustrated by the following examples:

```
\begin{arab}
'amruN, 'ibiluN, 'u_htuN, '"u_ht"uN, '"Uql"Id"Is, ra'suN, 'ar'asu,
sa'ala, qara'a, bu'suN, 'ab'usuN, ra'ufa, ru'asA'u, bi'ruN, 'as'ilatun,
ka'iba, qA'imuN, ri'AsaTuN, su'ila, samA'uN, barI'uN, sU'uN, bad'uN,
^say'uN, ^say'iN, ^say'aN, sA'ala, mas'alaTuN, saw'aTuN, _ha.tI'aTuN,
jA'a, ridA'uN, ridA'an, jI'a, radI'iN, sU'uN, .daw'uN, qay'iN, .zim'aN
, yatasA'alUna, 'a`dA'akum, 'a`dA'ikum, 'a`dA'ukum maqrU'aT, mU'ibAt,
taw'am, yas'alu, 'a.sdiq^A'uh_u, ya^g^I'u, s^U'ila
\end{arab}
```

أَمْرٌ، إِبْلٌ، أُخْتٌ، أَخْتٌ، أَوْلَى، أَرَأَسٌ، رَأَسٌ، سَأَلٌ، قَرَأٌ، بُؤْسٌ، أَبْؤُسٌ، رَوْفٌ، رَوْسَاءٌ، بَئْرٌ،
أَسْلَةٌ، كَثِبٌ، قَائِمٌ، رِاسَةٌ، سَعْلٌ، سَمَاءٌ، بَرِيءٌ، سُوءٌ، بَدْءٌ، شَيْءٌ، شَيْئاً، سَاعَلٌ، مَسَالَةٌ، سَوَّاهٌ،
خَطِيعَةٌ، جَاءٌ، رِدَاءٌ، جِيَاءٌ، رَدِيَاءٌ، سُوءٌ، ضَوءٌ، فَيِءٌ، ظَمَئٌ، يَسَاءُلُونَ، أَعْدَاءُكُمْ، أَعْدَائِكُمْ،
أَعْدَاؤُكُمْ مَقْرُوْةٌ، مُؤْبَاتٌ، تَوَامٌ، يَسَالُ، أَصْدِقَاتُهُ، يَحِيَّءُ، سُوكَلٌ

3.2.2 Special orthographies

Some Arabic words, like *mi'a* “hundred”, have irregular orthographies. Arab \TeX recognizes them automatically.

```
\begin{arab}[voc]
mi'aT , mi'at"An , sab`ami'"aT
\end{arab}
```

مِائَةٌ ، مِائَانٌ ، سَبْعَمِائَةٌ

NB: For the time being only *mi'a* is supported, but more irregular constructs may be added in later versions.

3.2.3 Typesetting the Holy Qur'an

High-quality typesetting of the Holy Qur'an (القرآن الكريم) is a most complex and demanding task, which probably should be left to professional typesetters. Nevertheless, with Open Type fonts that cover the full Unicode range for the Arabic script, it is possible to achieve pretty decent results. The following examples represent my attempt to reproduce, with the font Amiri, the various typographic features of a typical printed edition (disregarding those that cannot be achieved by means of Unicode, such as putting the *hamza* directly over the baseline).¹¹

```
\begin{arab}[fullvoc]
sUraTu 'l-ssajdaTi, 15--16:
```

```
'innamA yu'minu bi-'AyAtinA 'lla_dIna 'i_dA _dukkirUA bihA
_harrUA sujjadaN wa-sabba.hUA bi-.hamdi rabbihim wa-hum 1A yastakbirUna
SAJDA [[15]] tatajAfY_a junUbuhum `ani 'l-ma.dAji`i yad`Una rabbahum
_hawfaN wa-.tama`aN wa-mimmA razaqn_ahum yunfiqUna [[16]]
\end{arab}
```

```
\begin{arab}[fullvoc]
sUraTu 'l-baqaraTi, 71--72:
```

```
qAla 'innahu, yaqUlu 'innahA baqaraTuN lla _dalUluN tu_tIru 'l-'ar.da wa-1A
tasq.I 'l-.har_ta musallamaTuN lla ^siyaTa fIhA|^JIM qAluW" 'l-'Ana
ji'ta bi-'l-.haqqi|^JIM fa_daba.hUhA wa-mA kAdduW" yaf`alUna [[71]] wa-'i_d
qataltu nafsan fa-udda_ara|'|-i"tum fIhA|^SLY wa-al-11_ahu mu_hrijuN mmA
kun"tum taktaUmUna [[72]]
\end{arab}
```

سُورَةُ السَّجْدَةِ، ١٥-١٦ :

إِنَّمَا يُؤْمِنُ بِآيَاتِنَا الَّذِينَ إِذَا ذُكِرُوا هُنَّ حَرُوفٌ سُجَّداً وَسَبَحُوا بِحَمْدِ رَبِّهِمْ وَهُمْ لَا يَسْتَكِبِرُونَ ﴿١٥﴾ تَجَافَى جُنُوبَهُمْ
عَنِ الْمَضَاجِعِ يَدْعُونَ رَبِّهِمْ خَوْفًا وَطَمْعاً وَمَا رَزَقْنَاهُمْ يَنْفَقُونَ ﴿١٦﴾

سُورَةُ الْبَقْرَةِ، ٧٢-٧١ :

قَالَ إِنَّهُ يَقُولُ إِنَّهَا بَقْرَةٌ لَا ذُلُولٌ ثُبُرٌ الْأَرْضُ وَلَا تَسْقَى الْحَرَثُ مُسْلَمَةٌ لَا شَيْءٌ فِيهَا قَالُوا أَلَانَ جِئْتَ بِالْحَقِّ
فَذَبَّحُوهَا وَمَا كَادُوا يَفْعَلُونَ ﴿٧١﴾ وَإِذْ قَتَلْمَ نَفْسًا فَادَّرْتُمْ فِيهَا وَاللَّهُ مُخْرِجٌ مَا كُنْتُمْ تَكْتُمُونَ ﴿٧٢﴾

¹¹In the previous version of the manual, I attempted to mimic that behaviour with a TeX macro \hamzaB, which happened to work more or less well with the font Scheherazade. With Amiri it does not and I have reverted to standard spellings.

3.2.4 Farsi

These are some of the Persian examples in the ArabTeX documentation, typeset with the font IranNastaliq:¹²

```
\begin{farsi}[novoc]
_hwAb, xwI^s, _hwod, ^ceH, naH, yal_aH, _hAneH, _hAneHhA, _hAneH-hA,
ketAb-e, U, rAh-e, t_U, nAmeH-i, man, bInI-e, An, mard, pA-i, In,
zan, bAzU-i, In, zan, dAr-_i, man, _hU-_i, t_U, nAmeH-_i, sormeH-_i,
gofteH-_i, ketAb-I, rAh-I, nAmeH-I, dAnA-I, pArU-I, dAnA-I-keH,
pArU-I-keH, rafteH-am, rafteH-Im, AnjA-st, U-st, t_U-st, ketAb-I-st,
be-man, be-t_U, be-An, be-In, be-insAn, beU, be-U, .sA.heb"|"_hAneH,
pas"|"andAz, naw"|"AmUz
\end{farsi}
```

خواب، خوش، خود، چه، نه، یلد، خانه، خانه، کتاب، او، راه، تو، نامه، من، مین، آن، مرد، پای،
این، زن، بازوی، این، زن، دار، من، خوی، تو، نامه، سرمه، گفته، کتابی، راهی، نامه‌ای، دانائی،
پاروئی، دانائیکه، پاروئیکه، رفتہ ام، رفتہ ایم، آنجاست، اوست، توست، کتبیست، بمن، بو، آبان، باین،
بانسان، باو، باو، صاحب خانه، پس نداز، نواموز

3.2.5 Urdu

An Urdu example, typeset with Hussaini Nastaleeq:¹³

```
\begin{urdu}[novoc]
,ham `i^sq kE mArO.n kA itnA ,hI fasAna,h ,hae
rOnE kO na,hI.n kO'I ,ha.nsnE kO zamAna,h ,hae

ya,h kiskA ta.sawwur ,hae ya,h kiskA fasAna,h ,hae
j0 a^sk ,hae A.nkhO.n mE.n tasbI.h kA dAnA ,hae
\end{urdu}
```

¹²<http://www.scict.ir/portal/File>ShowFile.aspx?ID=29bc4b98-bfd0-428d-b56b-63e36de8c9b5>

¹³<https://github.com/khaledhosny/hussaini-nastaleeq>. The example is borrowed from <http://tabish.freeshell.org/u-trans/urducode.html>

ہم عشق کے ماروں کا اتنا ہی فنا نہ ہے
 رونے کو نہیں کوئی بنسنے کو زمانہ ہے
 یہ کسکا تصور ہے یہ کسکا فنا نہ ہے
 جو اشک ہے آنکھوں میں تسبیح کا دانا ہے

3.3 Transliteration

At the moment transliteration mappings are provided for Arabic, Persian, Urdu, Sindhi and Pashto. The rest may be provided in a future version. As a rule the default conventions provided are those of the Library of Congress. For Arabic the alternative transliteration of the [Deutsche Morgenländische Gesellschaft](#) is also available (but should be still considered experimental). You can set it with the command

\SetTranslitConvention	\SetTranslitConvention{dmg}. To switch back to the Library of Congress transliteration, type \SetTranslitConvention{loc}. Additional conventions for other languages, as with ArabTEX, e.g., Encyclopedia of Islam, Encyclopedia Iranica, etc., might be added later. ¹⁴
\SetTranslitStyle	\SetTranslitStyle{\upshape}. To transliterate proper nouns with capitals, prefix \UC the words to be capitalized with \UC:

```
\begin{arab}[trans]
al-^say_h al-`Alim \UC na.sIr \UC al-dIn \UC al-.tUsI
\end{arab}
```

al-shaykh al-`ālim Naṣīr al-Dīn al-Ṭūsī

Note that the article *al-* is automatically skipped. Note also that since the transliteration is coded in Unicode at the level of the font-mapping, it is necessary that the font contains all required glyphs.

3.4 Typesetting critical editions with ednotes

In conjunction with *bidi*, the *ednotes* package makes it wonderfully easy to typeset critical editions of texts in Arabic script (or other RTL scripts).¹⁵ The direction of each level of footnotes can be controlled by means of \SetFootnoteHook{\setRL}

¹⁴It is suggested that you contact the author if you have such needs.

¹⁵The package *ledmac* has not been extensively tested with *bidi* yet, but our initial trials were not successful.

(or `\setLR`) right before the declaration `\DeclareNewFootnote{X} [...]`. Here is an example preamble that might be used for typesetting a critical edition with `ednotes` and `ArabXETEX`.¹⁶ See the `ednotes` documentation for more details.¹⁷

```
\usepackage[modulo,perpage,para*]{ednotes}%this calls manyfoot.sty and lineno.sty
\usepackage{arabxetex}

% make \footnoterule of \textwidth
\makeatletter%
\renewcommand{\footnoterule}{\kern-3\p@%
    \hrule width \textwidth \kern 2.6\p@}
\makeatother

\modulolinenumbers[5]
% this is to set linenumering in Arabic:
\renewcommand{\linenumberfont}{\arabicfont\addfontfeature{Mapping=arabicdigits}\tiny}

\renewcommand{\extrafootnoterule}{}
\SelectFootnoteRule[0]{extra}
\SetFootnoteHook{\unsetRL}--> must appear immediately before \DeclareNewFootnote
% For ednotes the command \PrecedeLevelWith{X}{hook} is available
\DeclareNewFootnote{B}[fnsymbol]
\renewcommand*{\differentlines}[2]{\linesfmt{\RL{#1-$\#2}}}
\renewcommand*{\linesfmt}[1]{\raisebox{1ex}{\linenumberfont #1~}}
\renewcommand{\lemmfmt}[1]{#1~[ ]}

%Custom macros to enter variants, additions, omissions, illegible passages,
% text above the line, marginal notes, lacunae, and restorations:
\newcommand{\VAR}[2]{\Anote{\textarab{#1}}{\textarab{#2}}}
\newcommand{\ADD}{\textroman{\textbf{+}}\,} or \textarab{zAyid fI}\
\newcommand{\OM}{\textroman{\textbf{char"2013}}\,} or \textarab{nAqi.s fI}\
\newcommand{\ILLEG}{\textarab{.gayr maqrU' fI}\,}
\newcommand{\BLANK}{\textarab{bayA.d fI}\,}
\newcommand{\SUPERLIN}{\textarab{ta.ht al-sa.tr fI}\,}
\newcommand{\MARG}{\textarab{bi-al-hAmi^s fI}\,}
\newcommand{\LACUNA}{\textroman{\textlangle~\dots~\textrangle}}
\newcommand{\RESTOR}[1]{\textroman{\textrangle#1\textroman{\textlangle}}}

% to separate lemmas in different manuscripts:
\def\SEP{\enskip$\Vert$\enskip}
```

¹⁶Of course if the edition is typed directly in UTF-8 encoding, the use of `ArabXETEX` is by no means compulsory. Yet see the remarks in § 2.1 above.

¹⁷<http://www.ctan.org/tex-archive/macros/latex/contrib/ednotes/ednotugb.pdf>. See also http://www.webdesign-bu.de/uwe_lueck/criteditx.html.

For a real-life example of how to use ednotes with Arab \TeX , see the file `ednotes_example.tex` which comes with this package.

4 Tabular overview of Arab \TeX encoding conventions

The table is arranged alphabetically following the most significant letter of the ASCII input code. Color convention: red means that the glyph is the default for the given input code, and that it is available in all languages except those where different glyphs are shown (in black). That default glyph is also displayed in light gray under each language in which it is featured. Glyphs in blue are archaic forms (*e.g.*, old Urdu). An asterisk after the Unicode number means that the character was not available with Arab \TeX . Green glyphs are special: either they are used to represent defective writing or they provide characters for other languages. Those shown in the column for Arabic are available by default. See the relevant notes at the end.

^a For Western Punjabi (Lahnda).

^b Alternative form of گ in Malay.

^c For Dargwa (language of Dagestan).

^d For Kirgiz (and Uighur).

^e To transliterate dialects and foreign words.

^f Alternative to _d.

Maghribi Arabic is identical to Arabic except for the three letters f, q and v which yield the glyphs ڣ (U+06A2), ڣ (U+06A7), and ڏ (U+06A5), respectively.
