

# Deploy Package dari iPAT Server

Deploy package dari iPAT Server sebetulnya tidak terlalu sukar. Semua dapat dilakukan menggunakan Wizard yang tersedia.

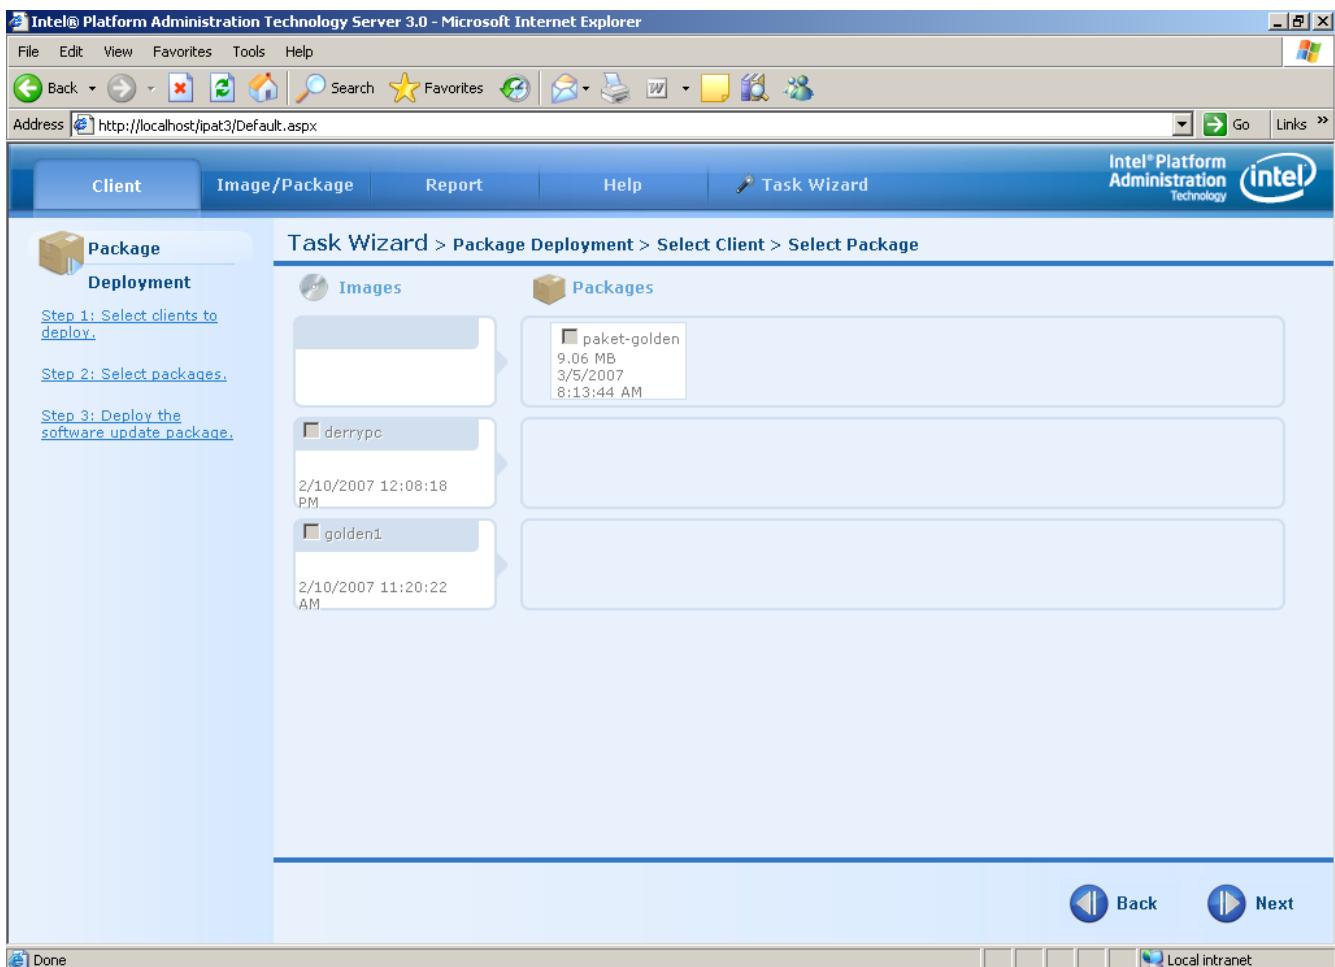

The screenshot shows the Intel Platform Administration Technology Server 3.0 interface in Microsoft Internet Explorer. The main menu includes File, Edit, View, Favorites, Tools, and Help. The toolbar includes Back, Forward, Stop, Refresh, Search, Favorites, and various file operations. The address bar shows the URL <http://localhost/iPAT3/Default.aspx>. The top right corner features the Intel logo and the text "Intel® Platform Administration Technology". The main content area has tabs for Client, Image/Package, Report, Help, and Task Wizard. The Client tab is selected, displaying a table of managed clients. The table columns are Alert, Client Name, IP Address, Current Status, Current Task, Deployment Info, and Motherboard Info. Two clients are listed: 'goldenpc' (IP 192.168.10.2, OS Status, Task golden1(+1), Deployment AB94610J.0125) and 'derrypc' (IP 192.168.10.10, After Life, Deployment derrypc, Motherboard AB94610J.0125). A sidebar on the left lists Client Tasks: Deploy Image, Deploy Package, Power Off, Reset, Boot To OS, Recover, and Update Firmware. Another sidebar lists Client Management options: Configuration, Move to ..., and Remove. A third sidebar lists Group Management: Group Configuration. At the bottom, there are buttons for Done and Local intranet.

Alert	Client Name	IP Address	Current Status	Current Task	Deployment Info	Motherboard Info
<input checked="" type="checkbox"/>	goldenpc	192.168.10.2	OS Status		golden1(+1)	AB94610J.0125
<input type="checkbox"/>	derrypc	192.168.10.10	After Life		derrypc	AB94610J.0125

Untuk mendeploy Package, kita perlu terlebih dulu memilih client PC mana saja yang akan kita install package tersebut.

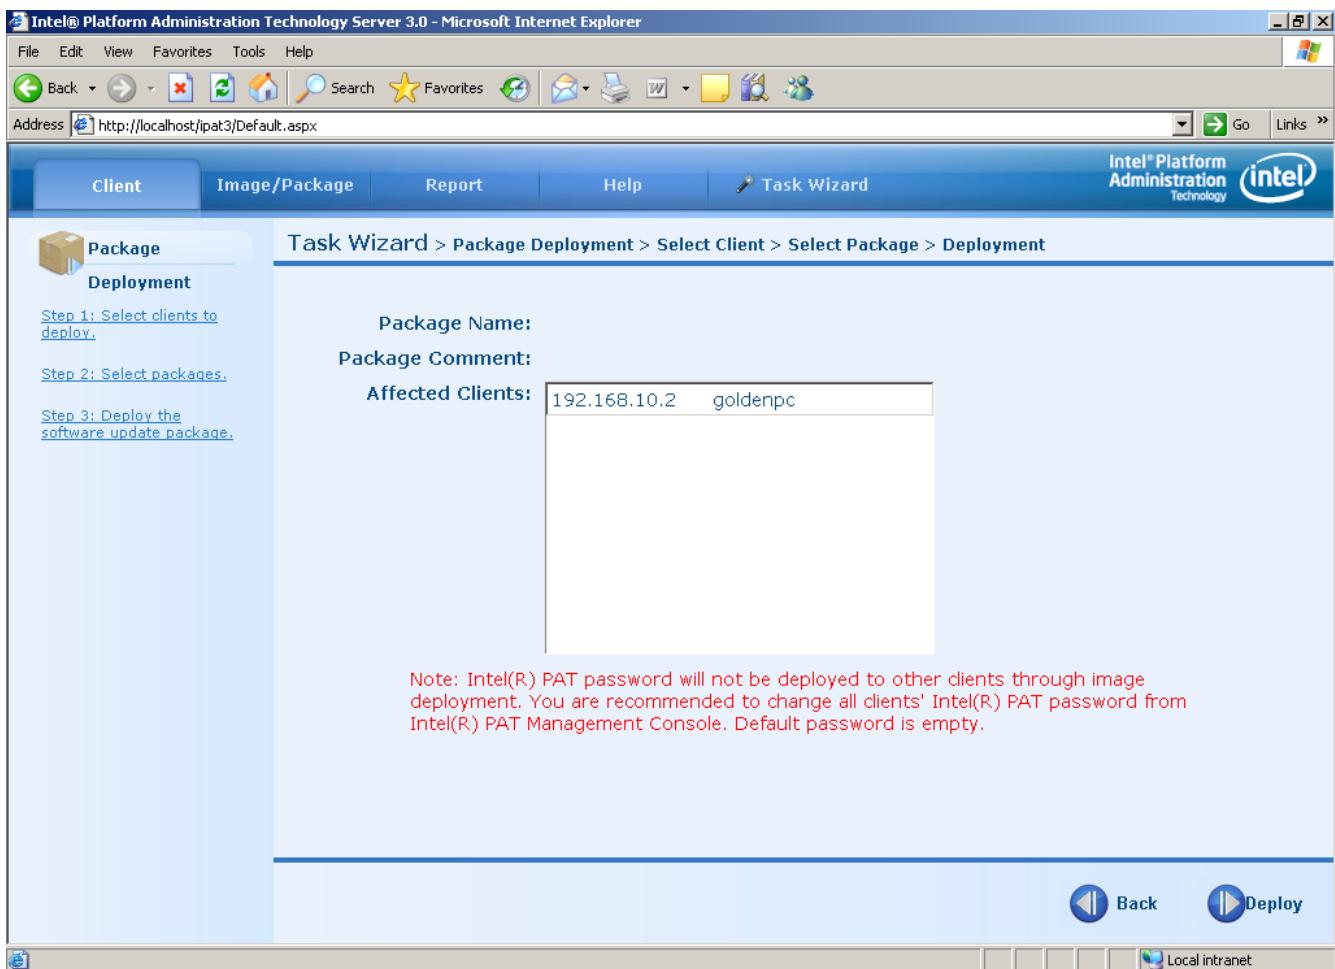

Pastikan bahwa Client PC tersebut bukan Golden PC yang menjadi referensi pembuatan package maupun image partisi.

Setelah Client PC di pilih, langkah selanjutnya adalah memilih menu Deploy Package yang tersedia di menu sebelah kiri.

Setelah client PC di pilih, dan menu Deploy Package di pilih, langkah selanjutnya adalah memilih package yang akan di deploy.

Tekan tombol Next untuk melanjutkan proses Deployment.

Sebelum deployment package di lakukan, iPAT Server akan memberitahukan rangkuman yang akan dilakukan termasuk IP address dan nama-namaclient PC yang akan di ubah package-nya.

Tekan tombol Deploy, dan package akan segera di deploy.
