Vovida Open Communication Application Library

System Administration Guide

Software Version 1.4.0

---

**Copyright** Copyright © 2001, Cisco Systems, Inc.

---

**Guide Versions** The following table matches the software versions with the guide versions:

<b>Software Version</b>	<b>Guide Version</b>	<b>Date</b>	<b>Comments</b>
1.0.0			Internal Trials Only
1.1.0			Internal Trials Only
1.2.0	1.2	March 26, 2001	Open Release to Public
1.2.0	1.2 A	April 11, 2001	Copy edit errors corrected.
1.3.0	1.3	December 21, 2001	Support new open release to public
1.4.0	1.4	June 23, 2002	Changes to Call Flows and other minor editing.

---

**Version** This manual is written to support VOCAL Version 1.4.0.

---

**Support** The primary location for support, information and assistance for the VOCAL system is <http://www.vovida.org/>. This site contains other documentation, training materials, development tools, development resources and informational mailing lists.

---

# Preface

---

**Introduction**

This chapter is a general introduction to the System Administration manual, and provides information about the intentions and organization of the manual. It also provides information about additional resources available from <http://www.vovida.org>.

---

**Objectives**

This guide provides Information about adding users and assigning features. Information for installing and provisioning a VOCAL system is provided in the [Installation Guide](#).

---

**Who Should Use This Book?**

This manual is intended for crafts person and system administrators who are familiar with either the Linux or Sun Solaris operating systems; and should also be familiar with Session Initiation Protocol (SIP) and the general concepts and principles of Voice over IP (VoIP) telephony networks.

---

**How is This Guide Organized?**

This guide is organized as follows:

<i>Chapter</i>	<i>Title</i>	<i>Description</i>
<b>Chapter 1</b>	Setting Up Users	Describes how to add, view, edit and delete users from the VOCAL system.
<b>Chapter 2</b>	Network Management	Describes system monitoring and SNMP functions.
<b>Appendix A</b>	Features	Describes features supported by the VOCAL system.
<b>Appendix B</b>	Supported SIP Messages	Describes supported SIP request and response messages.

<b>Chapter</b>	<b>Title</b>	<b>Description</b>
<b>Appendix C</b>	Call Flows	Provides illustrations and descriptions of call flows for various call scenarios.

---

**Documentation Conventions** The following is a list of conventions used in this guide:

<b>Convention</b>	<b>Description</b>
<b>bold text</b>	Names of elements found on the GUI screen, including buttons, and selectable entities such as, servers and server groups.
< >	Text that appears between angle brackets describes variables such as, <group name>.
courier font	System responses and prompts either from the CLI or GUI.
<b>bold courier font</b>	Indicates information that you must enter.
<b>■Note</b>	Highlights points of additional interest for the user.
 <b>Caution</b>	Be careful, this symbol highlights a potential for equipment damage or loss of data.

## Additional resources

### Publications

An [Installation Guide](#), which includes a system overview, installation instructions and information about provisioning the servers is also available from <http://www.vovida.org>.

### On Line Resources

Vovida.org (<http://www.vovida.org>) is a community web site dedicated to providing a forum for open source software used in datacom and telecom environment. This site was created to provide an environment where open source communications information and software can be easily located, accessed, retrieved and shared.

Editing User: Show Alias .....	1-29
Editing User Features: User Controlled .....	1-30
<b>Editing User Feature: Edit User Screen .....</b>	<b>1-31</b>

# Working With The GUI Environment

## Overview

This section describes:

- the login screen and how to log into the VOCAL system
- the user configuration screen and available the buttons, options boxes, and data fields.

## Before you begin

The machine that was used to install the VOCAL system is known as the provisioning host. You can access the Provisioning Server from the provisioning host, or from any other PC that is connected to the network where the VOCAL system resides.

Before you can work with the Provisioning GUI, you must have the following:

- A web browser loaded on your machine. The browser can be any type that takes a Java Run-time Environment (JRE) plug-in version 1.3.1\_01.
- Access to the Internet to download the Java plug-in. All networking requirements are covered in the VOCAL Installation Guide.

You must also know the host name of your provisioning host and the system name that was entered during the software installation. This information is used to access the web page that contains the links to the GUI system utilities. This web address can be expressed as:

`http://<provisioning host name>/vocal/index.html`

### ■Note

An example of this web address could be:

`http://local_host/vocal/index.html`

## Accessing the GUI

To access the Provisioning GUI, go to:

`http://<provisioning host name>/vocal/index.html`

and select **Provision System**.

The first Provisioning screen calls a Java plug-in. The plug-in is not shipped with the software, it must be downloaded from the Internet. Normally, this plug-in would have been downloaded to the provisioning host during the software installation process.

However, if you are accessing the system from another machine besides the provisioning host, a download prompt appears when the screen is first loaded. Accept the download file and load the plug-in onto your machine. Once the plug-in has been loaded the Provisioning Login screen appears as shown in [Figure 1-1 on page 1-3](#).

## Logging In

**Introduction** The Provisioning Login screen provides access for Administrators to work with the users, and for Technicians to work with the servers.

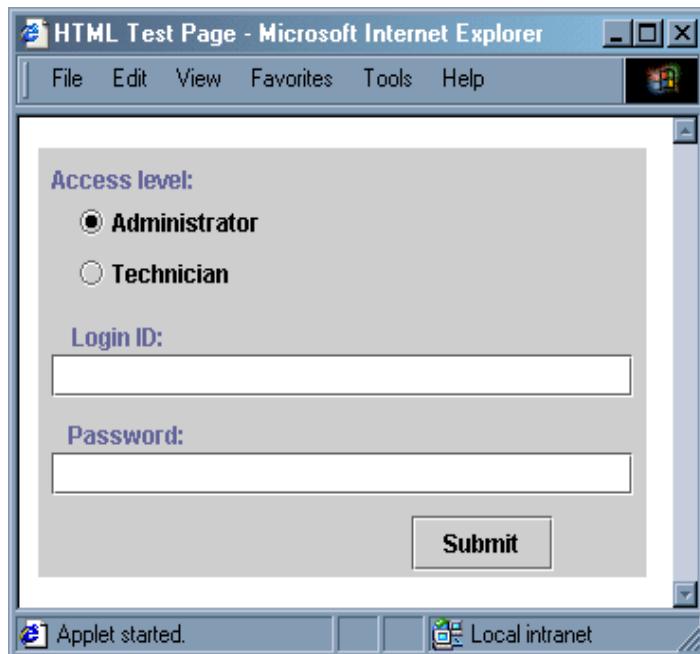

**Definition** The login screen is a java-enabled graphical user interface (GUI) that runs in a web browser. The browser can be any type that supports JRE 1.3.1\_01.

**Procedure** To log in, follow these steps:

**Table 1-1. Procedure—Logging In to the User Configuration**

Step	Description
1	Select <b>Administrator</b> . As shown in the figure below.
2	Type your user ID and password. The default user ID is vovida, password: vovida.
3	Click <b>Login</b> , or press <b>Enter</b> .

**Login Screen** Figure 1-1 shows the Login Screen.

**Figure 1-1. Login Screen**

<b>Items and Fields</b>	Table 1-2 describes the items found on the Login Screen.
-------------------------	--

**Table 1-2. Login Screen: Item and Field Description**

<b>Item</b>	<b>Description</b>
Access Level	<b>Administrator</b> As an Administrator, you can add, view, edit or delete user entries. In addition, you can setup feature subscriptions for users. <b>Technician</b> As a Technician, you can edit the VOCAL server provisioning. For more information, see the VOCAL Installation Guide.
Login ID	The default is <i>vovida</i> .
Password	The default is <i>vovida</i> .

---

### Password Administration

There is a separate user interface for changing passwords and adding or removing accounts for administrators and technicians.

It is not setup as an applet, but you can run it stand alone. It is included in the psClient.jar. The main class is vocal.pw.AdminAcctManager.

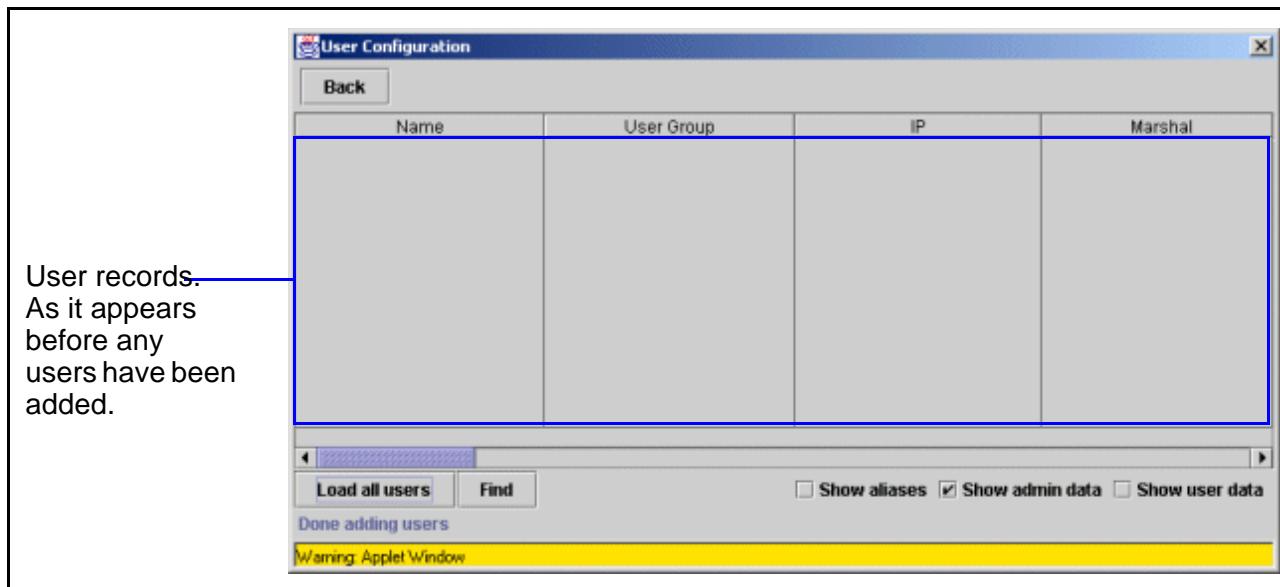

#### To maintain passwords, follow these instructions:

**Table 1-3. Procedure for Maintaining Passwords**

<b>Step</b>	<b>Description</b>
<b>1</b>	To run this user interface, type the following: <pre>java -classpath /path/to/psClient.jar:path/to/ xerces.jar vocal.pw.AdminAcctManager pServer_host pServer_port</pre> A screen appears with a list of all the administrative accounts.
<b>2</b>	Use the popup menu to maintain the accounts. <b>■Note</b> It is possible to have an account that only accesses the administrator GUI, or only the technician GUI or both together.
<b>3</b>	To change the default password for a user, select the account in the GUI and click the <b>Change Password</b> button.

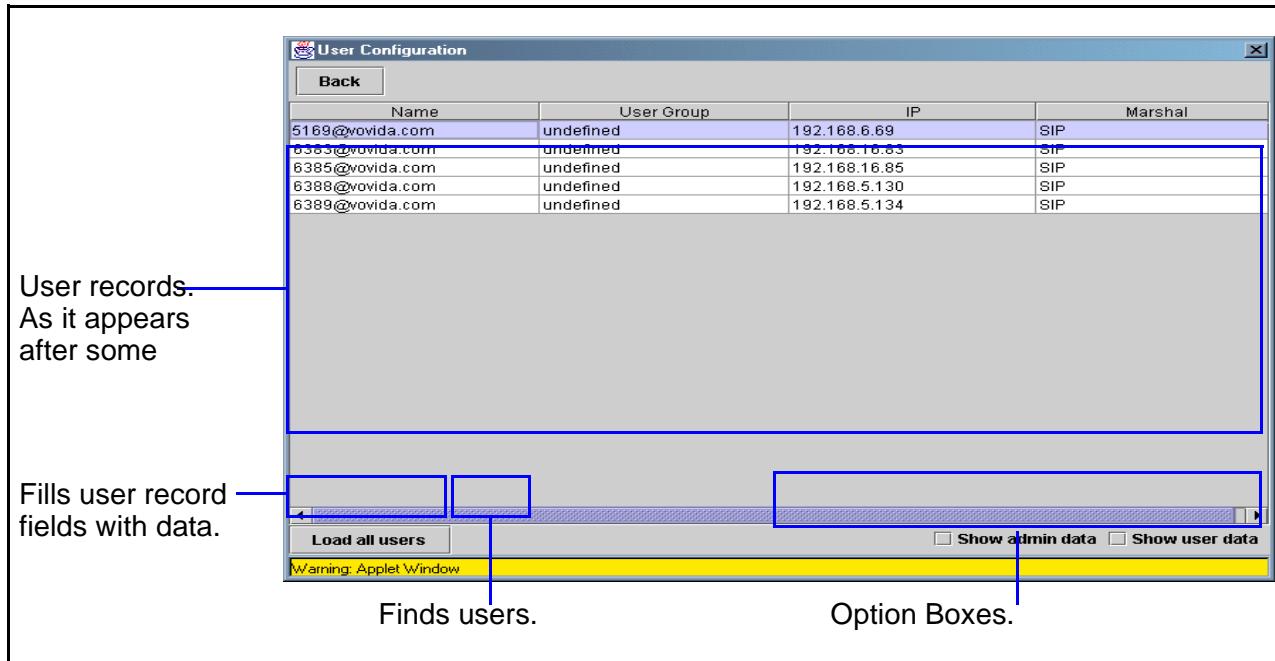

## Overview of the User Configuration Screen

- 
- Introduction** This section describes the buttons, option boxes, and data fields on the User Configuration Screen.
- 
- Screen Capture** Figures 1-2 and 1-3 show the User Configuration screen as it appears when you login. Figure 1-2 shows what the screen looks like when you login for the first time and the user records are blank.

*Figure 1-2. User Configuration Screen: Before Data Entry*

- 
- After Data Entry** Figure 1-3 shows what the screen looks like after some users have been added. For more information about adding users, see “[Adding New Users](#)” on page 1-10.

**Figure 1-3. User Configuration Screen: After Data Entry**

- 
- Buttons** Table 1-4 describes buttons on the User Configuration screen.

**Table 1-4. User Configuration Screen: Buttons**

Button	Description
Back	Lets you return to the login screen.
Load all users	Lets you load information for all users. Clicking this button fills the user records fields with data. See <a href="#">Figure 1-8 on page 1-25</a> for more information.
Find	Lets you find users. See <a href="#">Figure 1-9 on page 1-26</a> for more information.

**Option Boxes**

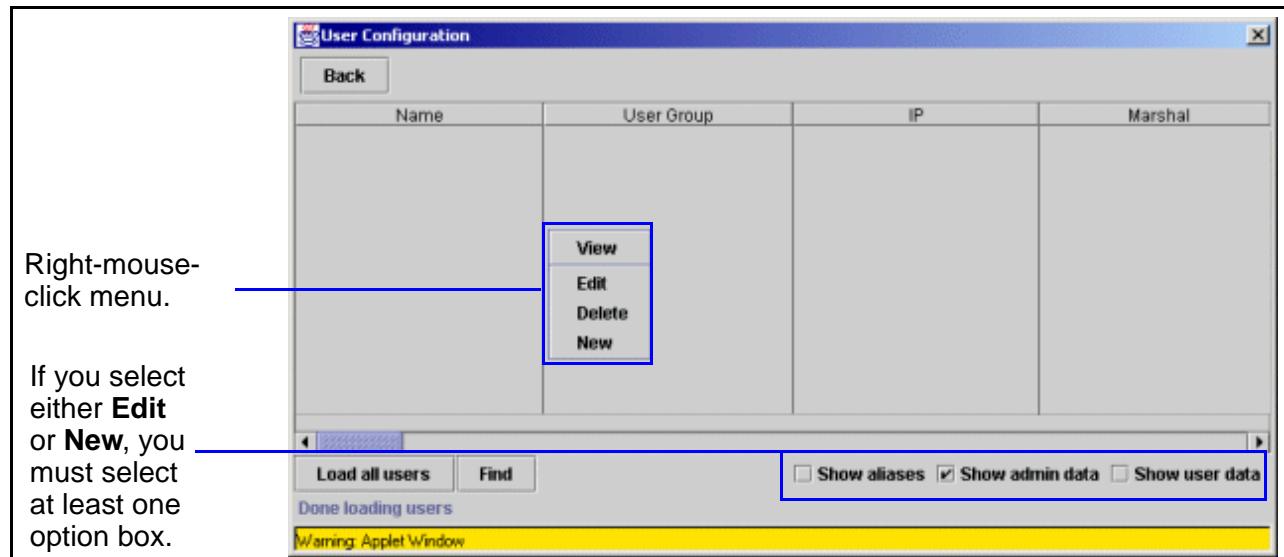

The option boxes filter the fields displayed on the User Configuration screen. If none of the boxes is selected, only the Name, User Group, IP and Marshal fields appear. If all of the boxes are selected, then all of the fields appear on the User Configuration screen. For a complete description of the data fields refer to the [“Viewing Users: Data Fields Descriptions” section on page 1-19](#). Table 1-5 describes the option boxes.

**Table 1-5. User Configuration Screen: Option Boxes**

Option	Description
Show aliases	Displays the users that have aliases. Aliases are displayed in italics. For more information, see <a href="#">“Editing User: Show Alias” on page 1-29</a> .
Show admin data	Displays information and fields configured by the administrator. For more information, see <a href="#">“Adding Users: Administrator’s Edit User Screen” on page 1-11</a> .
Show user data	Displays information and fields configured by the user. For more information, see <a href="#">“Editing User Feature: Edit User Screen” on page 1-31</a> .

**Right-Mouse-Click Menu**

The User Configuration screen has a hidden menu that you can bring up by right-mouse clicking the screen over the space reserved for the user records. Figure 1-4 shows this menu.

**Figure 1-4. User Configuration Screen: Right-Mouse-Click Menu**

**Right-Mouse-Click Menu Options** Table 1-6 shows the options available from the right-mouse-click menu.

**Table 1-6. User Configuration Screen: Right-Mouse-Click Menu Options**

<b>Option</b>	<b>Description</b>
<b>View</b>	View lets you view data field information in tabular format for one or more users. For more information, see <a href="#">Figure 1-6 on page 1-17</a> .
<b>Edit</b>	Edit lets you edit information for the user. Selecting edit will open the Edit user screen. For more information, see <a href="#">“Editing Users: Administrator Controlled” on page 1-28</a> .
<b>Delete</b>	Delete lets you delete the user. For more information, see <a href="#">“Deleting Users” on page 1-27</a> .
<b>New</b>	New lets you add a user. Selecting <b>New</b> opens a blank Edit user screen. For more information, see <a href="#">“Adding New Users” on page 1-10</a> .

---

**Option Boxes** If you select either **Edit** or **New**, you must select at least one option box as well. Depending on which option boxes (**show aliases**, **show admin data**, and/or **show user data**) are checked, different data fields or screens will appear when the right mouse options are used.

---

## **Adding, Viewing, Editing, and Deleting Users**

### **Introduction**

The "[Working With The GUI Environment](#)" section discussed the GUI buttons, option boxes and a right-mouse click menu that enables adding, viewing, editing and deleting users. This section provides information about using those GUI elements to perform tasks.

---

## **Adding New Users**

---

**Introduction** This section describes how to add new users.

---

**Procedure: Adding a New User** **To add a new user, follow these steps:**

**Table 1-7. Adding New Users**

<b>Step</b>	<b>Action</b>
<b>1</b>	Select the <b>Show admin data</b> option box.
<b>2</b>	Right-mouse click and select <b>New</b> .
<b>3</b>	The Edit user screen appears.
<b>4</b>	Enter the user name in the <b>Name</b> field.   <b>Caution</b> You are only allowed to enter and modify the <b>Name</b> field when you add a new user entry. After adding the new user, you cannot modify the name. If you enter a name incorrectly, delete the user and then re-enter him or her as a new user.
<b>5</b>	Enter or select the other fields as required.
<b>6</b>	Select the <b>Add</b> button to save the new user entry.

---

## Adding Users: Administrator's Edit User Screen

### Edit User Screen

Figure 1-5 illustrates the edit user screen that appears when the **show administrator data option box** is checked.

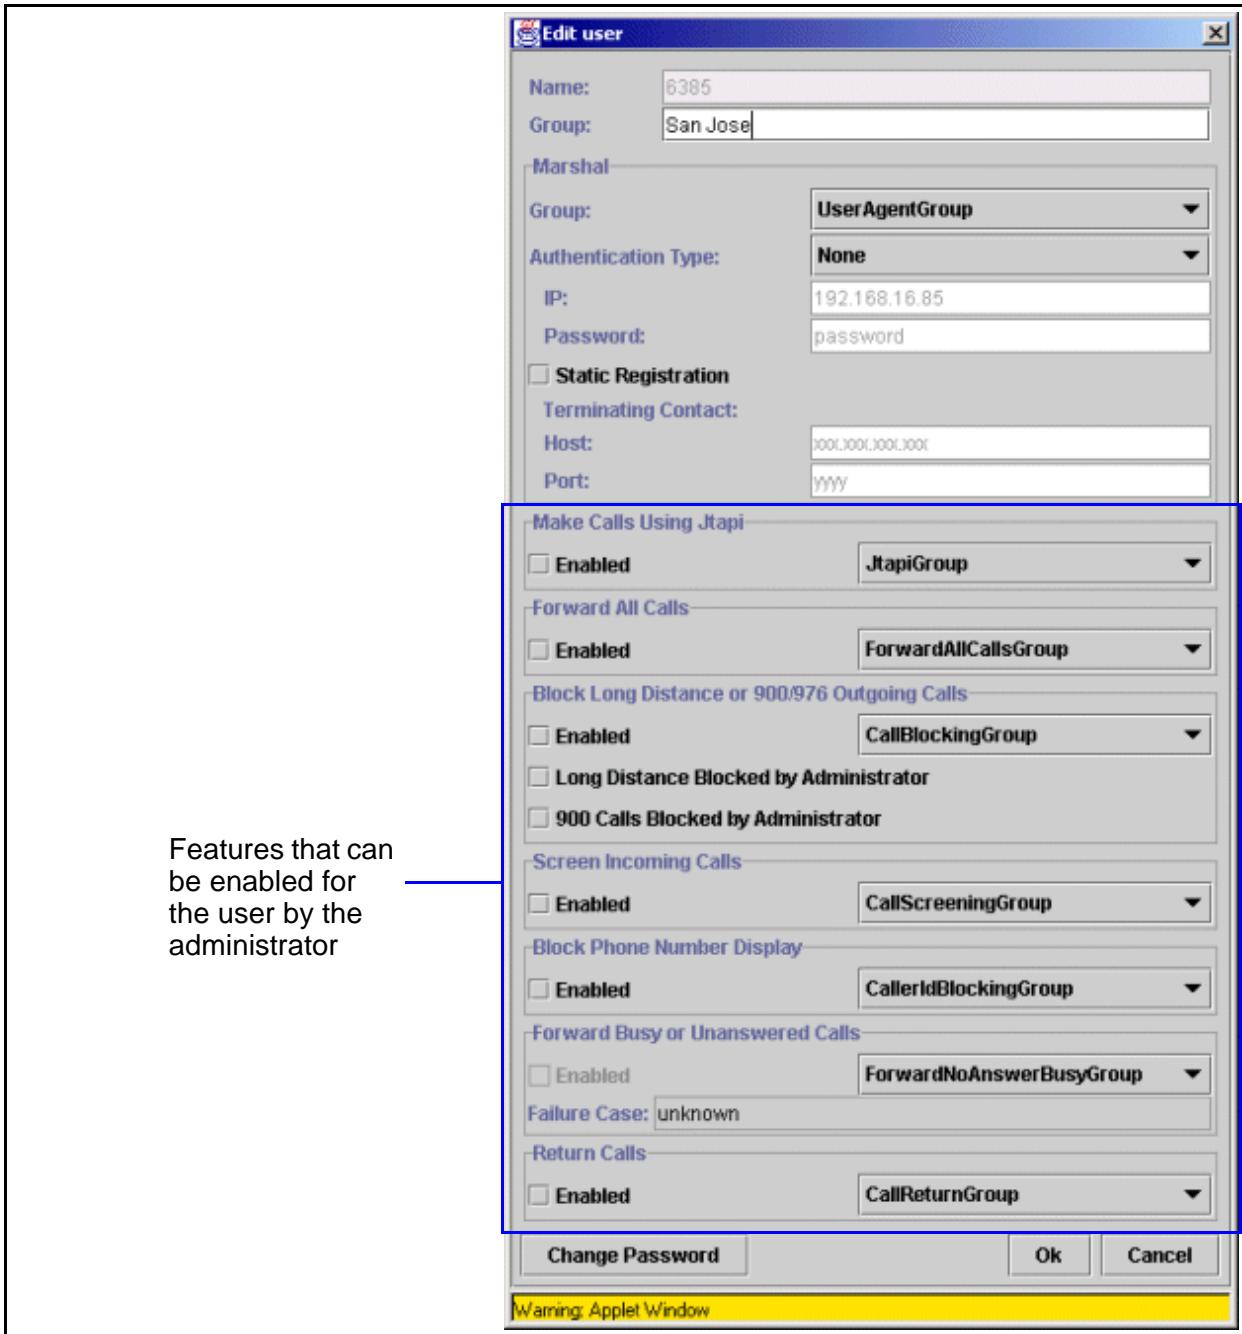

Figure 1-5. Edit User Screen: Show Admin Data

### Name

Specify the name of the user in alphanumeric characters. A unique name must be specified for each user.

## **Adding, Viewing, Editing, and Deleting Users**

---

<b>Group</b>	This field is a text identifier to help you classify your users.								
<b>Marshal</b>	<p><b>Group</b></p> <p>Allows you to select a User Agent Marshal server group from the pull down menu. The list of marshal server groups in the pull down menu corresponds to the marshal server groups provisioned under <b>servers/marshalServer/serverType UserAgent</b>. You can load balance users among different User Agent Marshal server groups.</p> <p><b>Authentication Type</b></p> <table border="1"><thead><tr><th><b>Field</b></th><th><b>Description</b></th></tr></thead><tbody><tr><td>Authentication Type</td><td>Allows you to select the type of authentication to use:<ul style="list-style-type: none"><li>• None—users are not authenticated by the User Agent Marshal server.</li><li>• Access List—users are authenticated by comparing the user's IP address with the address stored in the IP field.</li><li>• Digest—users are authenticated by comparing their password to data stored in the Password field.</li></ul></td></tr><tr><td>IP</td><td>Specifies the IP address of user. This IP address is used to authenticate the user during registration. This is only used for access list authentication.</td></tr><tr><td>Password</td><td>Specifies the user's password. This is only used for digest authentication.</td></tr></tbody></table>	<b>Field</b>	<b>Description</b>	Authentication Type	Allows you to select the type of authentication to use: <ul style="list-style-type: none"><li>• None—users are not authenticated by the User Agent Marshal server.</li><li>• Access List—users are authenticated by comparing the user's IP address with the address stored in the IP field.</li><li>• Digest—users are authenticated by comparing their password to data stored in the Password field.</li></ul>	IP	Specifies the IP address of user. This IP address is used to authenticate the user during registration. This is only used for access list authentication.	Password	Specifies the user's password. This is only used for digest authentication.
<b>Field</b>	<b>Description</b>								
Authentication Type	Allows you to select the type of authentication to use: <ul style="list-style-type: none"><li>• None—users are not authenticated by the User Agent Marshal server.</li><li>• Access List—users are authenticated by comparing the user's IP address with the address stored in the IP field.</li><li>• Digest—users are authenticated by comparing their password to data stored in the Password field.</li></ul>								
IP	Specifies the IP address of user. This IP address is used to authenticate the user during registration. This is only used for access list authentication.								
Password	Specifies the user's password. This is only used for digest authentication.								

### **Static Registration**

<b>Field</b>	<b>Description</b>
Static Registration	With static registration, the user agent or gateway is reachable via a fixed host name or IP address. The user agent does not have to register with the Marshal server. Static registration is primarily used for devices that do not support the SIP REGISTER message. Check the option box to enable static registration or uncheck the option box to disable static registration.
Terminating Contact: Host	Specify the IP address of user agent or gateway. You can only specify this field if the static registration option box is checked.
Terminating Contact: Port	Specify the port number of user agent or gateway. You can only specify this field if the static registration option box is checked.

**JTAPI**

Check the Enabled option box to enable the JTAPI feature. With this feature enabled the user can place calls using a JTAPI User Agent.

**■Note**

You must load a Java application, such as the JTAPI User Agent application that is bundled with VOCAL, to work with this JTAPI feature.

---

**ForwardAllCalls**

**Option Box**

Check the Enabled option box to enable the ForwardAllCalls feature for the user.

**Pull Down Menu**

The pull down menu allows you to select a Feature server group from the pull down menu. The list of Feature server groups in the pull down menu corresponds to the Feature server groups provisioned under **servers/featureServer/serverType ForwardAllCalls**. The Feature Server groups enable user load balancing. A load balancing utility is not included in the current software release.

---

**Call Blocking**

**Option Box**

Check the Enabled option box to enable the Call Blocking feature for the user. This will allow:

- Long distance blocked by administrator
- Long distance blocked by the user (set by the user).
- 900 calls blocked by administrator
- 900 calls blocked by the user (set by the user).

**■Note**

For version 1.4.0 of VOCAL, long-distance call blocking only works for calls originating from the North American Dialing Plan (NADP). Calls cannot be blocked if they originate from Europe, Asia or other locations that are not part of the NADP.

**Pull Down Menu**

The pull down menu allows you to select a Feature server group from the pull down menu. The list of Feature server groups in the pull down menu corresponds to the Feature server groups provisioned under **servers/featureServer/serverType CallBlocking**. You can load balance users among different Feature Server groups. A load balancing utility is not included in the current software release.

## ***Adding, Viewing, Editing, and Deleting Users***

---

<b>Call Screening</b>	<p><b>Option Box</b></p> <p>Check the Enabled option box to enable the Call Screening feature for the user.</p> <p><b>■Note</b></p> <p>For version 1.4.0 of VOCAL, phone numbers entered for call screening must include the area code, regardless if they are local or long-distance phone numbers. Call Processing Language does not provide a pattern matching method that differentiates seven digit (local) phone numbers from ten digit (long-distance) numbers.</p> <p><b>Pull Down Menu</b></p> <p>The pull down menu allows you to select a Feature server group from the pull down menu. The list of Feature server groups in the pull down menu corresponds to the Feature server groups provisioned under <b>servers/featureServer/serverType CallScreening</b>. You can load balance users among different Feature Server groups. A load balancing utility is not included in version 1.4.0 of VOCAL.</p>
<b>CallerIDBlocking</b>	<p><b>Option Box</b></p> <p>Check the CallerIDBlocking option box to enable the CallerID Blocking feature for the user.</p> <p><b>Pull Down Menu</b></p> <p>The pull down menu allows you to select a Feature server group from the pull down menu. The list of Feature server groups in the pull down menu corresponds to the Feature server groups provisioned under <b>servers/featureServer/serverType CallerIDBlocking</b>. You can load balance users among different Feature Server groups. A load balancing utility is not included in version 1.4.0 of VOCAL.</p>
<b>ForwardNoAnswer</b>	<p><b>Option Box</b></p> <p>Check the ForwardNoAnswer option box to enable the ForwardNoAnswer feature for the user.</p> <p><b>Pull Down Menu</b></p> <p>The pull down menu allows you to select a Feature server group from the pull down menu. The list of Feature server groups in the pull down menu corresponds to the Feature server groups provisioned under <b>servers/featureServer/serverType ForwardNoAnswer</b>. You can load balance users among different Feature Server groups. A load balancing utility is not included in version 1.4.0 of VOCAL.</p> <p><b>Failure Case</b></p> <p>Users can specify a number where calls are forwarded to when Call Forward No Answer or Call Forward Busy is turned on by the user. Refer to "<a href="#">"Editing User Feature: Edit User Screen" section on page 1-31</a>" for information on setting the user feature.</p> <p>The administrator can specify a failure case number or address. Incoming calls will be forwarded to this failure case number or address if the system receives a failure message instead of busy messages or a no answer signal.</p>

**Call Return**

**Option Box**

Check the Call Return option box to enable the Call Return feature for the user.

**Pull Down Menu**

The pull down menu allows you to select a Feature server group from the pull down menu. The list of Feature server groups in the pull down menu corresponds to the Feature server groups provisioned under **servers/featureServer/serverType CallReturn**. You can load balance users among different Feature Server groups.

---

**Change Password**

The Change Password button allows you to change the password for the user. This password is for the end user to gain access to his or her feature screen, as shown in [Figure 1-10 on page 1-31](#).

---

## **Viewing Users: Individually**

### **Introduction**

This section describes how to view records for individual users. If you have thousands of users loaded into your system, you will find that it is faster to load the data for individual users, or small groups of users, as required, rather than loading the data for all users every time you login as an Administrator.

Viewing individual records requires using the right-mouse-click menu, which is described below.

### **Viewing User**

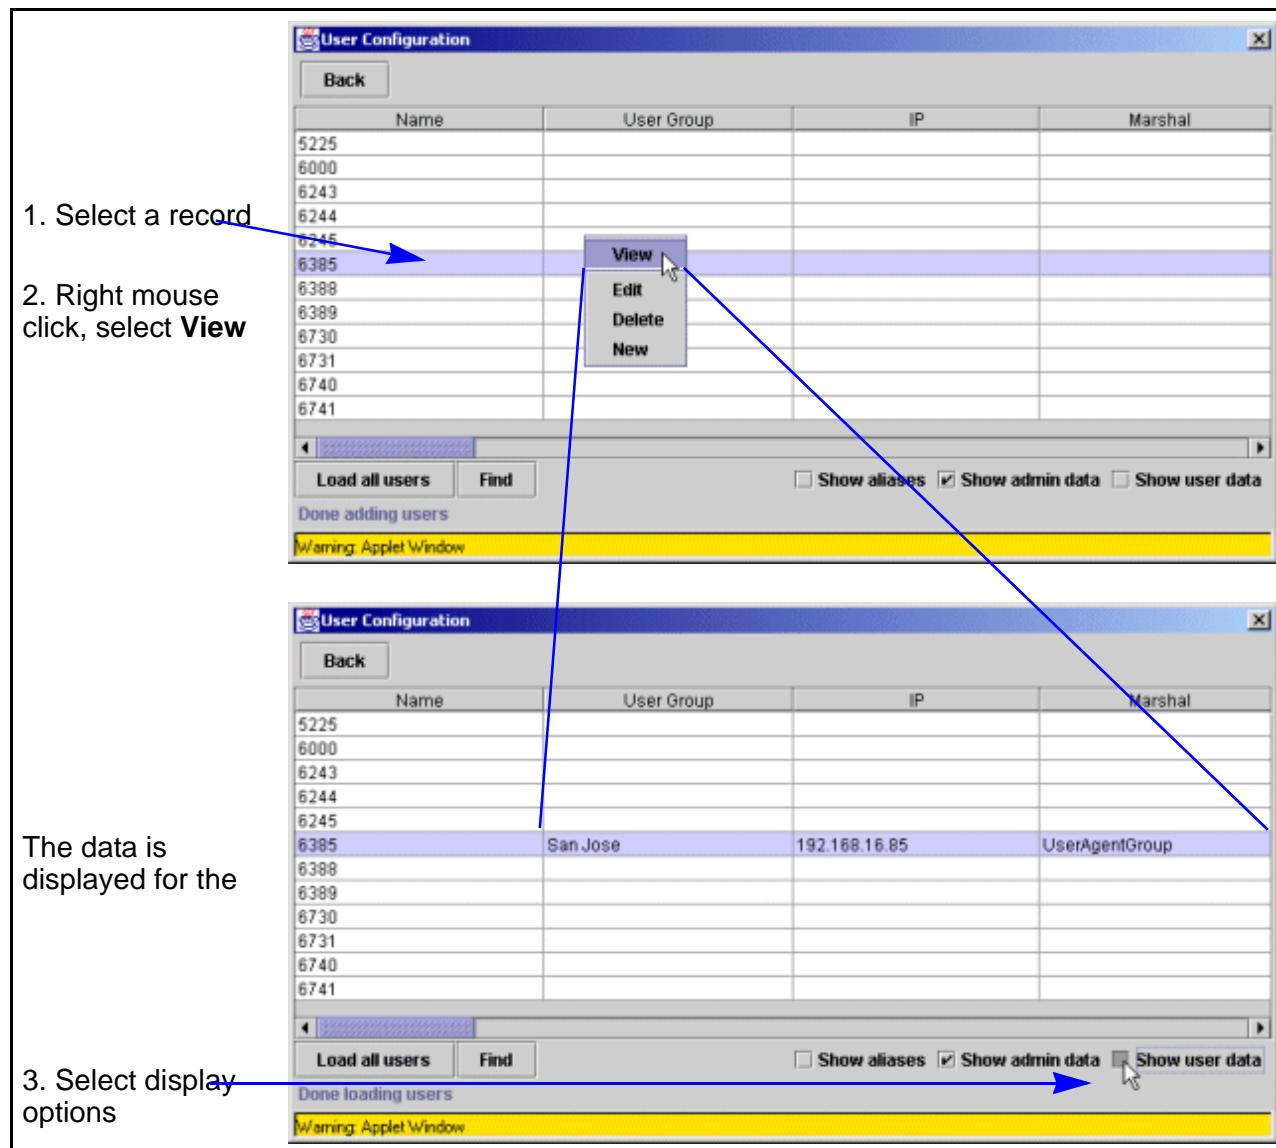

**To view data fields for users, follow these steps:**

***Table 1-8. Procedure for Viewing Users***

<b>Step</b>	<b>Action</b>
<b>1</b>	To select a user, click a table row. To select consecutive multiple users, hold down the shift key while clicking the table rows. To select non-consecutive multiple users, hold down the control key while clicking the table rows.
<b>2</b>	Using the right mouse click, select <b>View</b> .
<b>3</b>	Data fields with information will appear in the table. To sort the table by data type, check one or more of the option boxes: <ul style="list-style-type: none"><li>• <b>Show aliases.</b> User entries with aliases are shown in italics.</li><li>• <b>Show admin data.</b> Refer to <a href="#">Table 1-10 on page 1-19</a> for information on each admin data field.</li><li>• <b>Show user data.</b> Refer to <a href="#">Table 1-11 on page 1-22</a> for information on each user data field.</li></ul>

**Screen Capture:  
Viewing A Single  
User**

Figure 1-6 illustrates selecting the data for a single user.

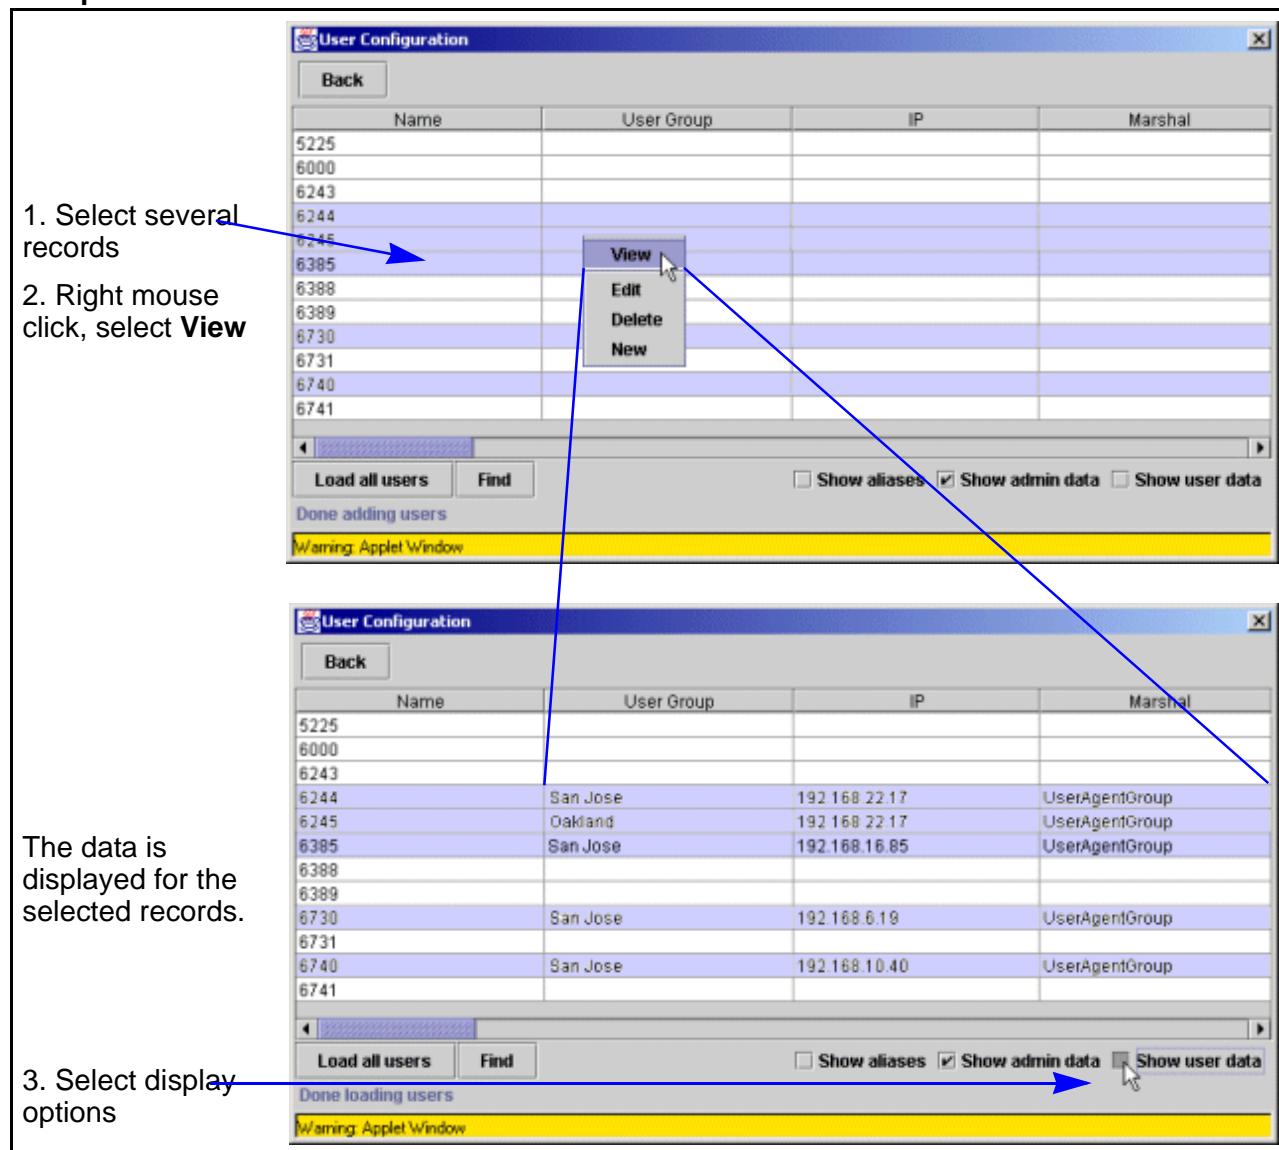

*Figure 1-6. Displaying Data for a Single User*

## **Adding, Viewing, Editing, and Deleting Users**

### **Screen Capture: Viewing Small Groups of Users**

Figure 1-7 illustrates selecting the data for a small group of users.

**Figure 1-7. Displaying Data for Small Groups of Users**

### **Load all Users**

To view information for all users, select the **Load all users** button as shown in [Figure 1-8 on page 1-25](#).

## Viewing Users: Data Fields Descriptions

---

<b>Introduction</b>	Different data fields appear in the user configuration screen depending on the option boxes selected.
<b>Default Data Fields</b>	When none of the option boxes are checked, the user configuration screen displays these default data fields:

---

**Table 1-9. Default Data Field**

<b>Field</b>	<b>Description</b>
Name	Specifies the unique name of the user.
User Group	Specifies the group name that the user is grouped in. An administrator can classify users by specifying a common user group name.
IP	Optional: Specifies the IP address of the user. If Access List is selected for authentication type, the IP address is used to validate the user. If None or Digest is selected for authentication type, the IP address is not used.
Marshal	Specifies the name of the Marshal server group.

---

<b>Admin Data Field</b>	When the Show admin data option box is checked, these data field appear in addition to the default data fields.
-------------------------	---

---

**Table 1-10. Admin Data Fields**

<b>Field</b>	<b>Description</b>
Forward All Calls Enabled	Indicates whether the Forward All Calls Enabled feature is enabled for the user: <ul style="list-style-type: none"> <li>Deselected: indicates that this feature is disabled for the user.</li> <li>Selected: indicates that this feature is enabled for the user.</li> </ul>
Forward All Group	Indicates the name of the ForwardAll Feature server group.
Forward Busy/No Ans. Enabled	Indicates whether the Forward Busy/No Answer feature is enabled for the user: <ul style="list-style-type: none"> <li>Deselected: indicates that this feature is disabled for the user.</li> <li>Selected: indicates that this feature is enabled for the user.</li> </ul>

## **Adding, Viewing, Editing, and Deleting Users**

**Table 1-10. Admin Data Fields (Continued)**

<b>Field</b>	<b>Description</b>
Forward Busy/No Ans. Group	Indicates the name of the ForwardBusyNoAnswer Feature server group.
Failure Case	Indicates the number or address to forward calls to there is a problem with contacting the destination called party.
Call Screen Enabled	Indicates whether the Call Screen feature is enabled for the user: <ul style="list-style-type: none"> <li>• Deselected: indicates that this feature is disabled for the user.</li> <li>• Selected: indicates that this feature is enabled for the user.</li> </ul>
Call Screen Group	Indicates the name of the Call Screen Feature server group.
Call Block Enabled	Indicates whether the Call Block feature is enabled for the user: <ul style="list-style-type: none"> <li>• Deselected: indicates that this feature is disabled for the user.</li> <li>• Selected: indicates that this feature is enabled for the user.</li> </ul>
Call Block Group	Indicates the name of the Call Block Feature server group.
Long Distance Admin Block	Indicates whether the Long Distance blocking feature is enabled by the administrator: <ul style="list-style-type: none"> <li>• Deselected: indicates that this feature is disabled.</li> <li>• Selected: indicates that this feature is enabled.</li> </ul>
900 # Admin Block	Indicates whether the 900 number blocking feature is enabled by the administrator: <ul style="list-style-type: none"> <li>• Deselected: indicates that this feature is disabled.</li> <li>• Selected: indicates that this feature is enabled.</li> </ul>
JTAPI Enabled	Indicates whether JTAPI feature is enabled: <ul style="list-style-type: none"> <li>• Deselected: indicates that this feature is disabled.</li> <li>• Selected: indicates that this feature is enabled.</li> </ul>
JTAPI Group	Indicates the name of the JTAPI Feature server group.

**Table 1-10. Admin Data Fields (Continued)**

<b>Field</b>	<b>Description</b>
Call Return Enabled	Indicates whether the Call Return feature is enabled for the user: <ul style="list-style-type: none"><li>• Deselected: indicates that this feature is disabled for the user.</li><li>• Selected: indicates that this feature is enabled for the user.</li></ul>
Call Return Group	Indicates the name of the CallReturn Feature server group.
Caller ID Block Enabled	Indicates whether the Call ID Block feature is enabled for the user: <ul style="list-style-type: none"><li>• Deselected: indicates that this feature is disabled for the user.</li><li>• Selected: indicates that this feature is enabled for the user.</li></ul>
Caller ID Group	Indicates the name of the CallerID Feature server group.
Authentication Type	Indicates the authentication type used to authenticate the user: <ul style="list-style-type: none"><li>• None</li><li>• Access List The IP address is required.</li><li>• Digest A password is required.</li></ul>
Password	Indicates the user's password when digest authentication is used.
Static Reg Enabled	Indicates whether static registration is enabled.
Terminating Host	Indicates the IP address of the terminating host when static registration is used.
Terminating Port	Indicates the port number on the termination host when static registration is used.

## **Adding, Viewing, Editing, and Deleting Users**

---

<b>User Data Field</b>	When the Show user data option box is checked, these data field appear in addition to the default data fields:
------------------------	--

**Table 1-11. User Data Fields**

<b>Field</b>	<b>Description</b>
Forward All Set	Indicates whether Forward All feature is set by the user: <ul style="list-style-type: none"><li>• OFF: indicates that call forwarding off.</li><li>• ON: indicates that call forwarding is on and all calls are forward to a number specified by the user.</li></ul>
Forward All To	Indicates the address or number where all calls are redirected when Forward All feature is set to ON or enabled.
Forward Busy Set	Indicates whether Forward Busy feature is set by the user: <ul style="list-style-type: none"><li>• Deselected: indicates that call forwarding when busy is not on.</li><li>• Selected: indicates that call forwarding busy is on and all calls are forward to a number specified by the user when the user is busy.</li></ul>
Forward Busy To	Indicates the address or number where all calls are redirected when Forward Busy Set is enabled.
Forward No Ans. Set	Indicates whether Forward No Answer feature is set by the user: <ul style="list-style-type: none"><li>• Deselected: indicates that call forwarding with no answer is not on.</li><li>• Selected: indicates that call forwarding no answer is on and all calls are forward to a number specified by the user when the user does not answer.</li></ul>
Forward No Ans To	Indicates the address or number where calls are redirected when the user does not answer the call and Forward No Ans. Set is enabled.
Long Distance User Block	Indicates whether Long Distance User Block feature is set by the user: <ul style="list-style-type: none"><li>• Deselected: indicates that long distance block is not on.</li><li>• Selected: indicates that long distance block is on and that the user cannot make long distance calls.</li></ul>

**Table 1-11. User Data Fields (Continued)**

<b>Field</b>	<b>Description</b>
900 # User Block	Indicates whether 900 Number Block feature is set by the user: <ul style="list-style-type: none"><li>• Deselected: indicates that 900 Number block is not enabled by the user. 900 numbers are not blocked and user can dial 900 numbers.</li><li>• Selected: indicates that 900 Number block is enabled by the user. 900 numbers are blocked and users cannot dial 900 numbers.</li></ul>
JTAPI Set	Indicates whether the JTAPI feature is set by the user: <ul style="list-style-type: none"><li>• Deselected: indicates that JTAPI feature is not on.</li><li>• Selected: indicates that JTAPI feature is on and that the user can make calls from a JTAPI User Agent.</li></ul> <p><b>■ Note</b> You must load a Java-based application, such as a JTAPI User Agent, to work with this JTAPI feature.</p>
Caller ID Blocking Set	Indicates whether the Caller ID Blocking feature is set by the user: <ul style="list-style-type: none"><li>• Deselected: indicates that Caller ID feature is not on.</li><li>• Selected: indicates the Caller ID feature is on.</li></ul>

## **Viewing Users: All Users**

---

**Introduction** This section explains how to use the **Load all users** button and the option boxes to view user data.

---

**Overview** For situations where you need to compare the data between users, you can click the **Load all users** button. This button activates a program that reads a flat file on the Provisioning Server, containing all user data, and displays the data in the GUI.

---

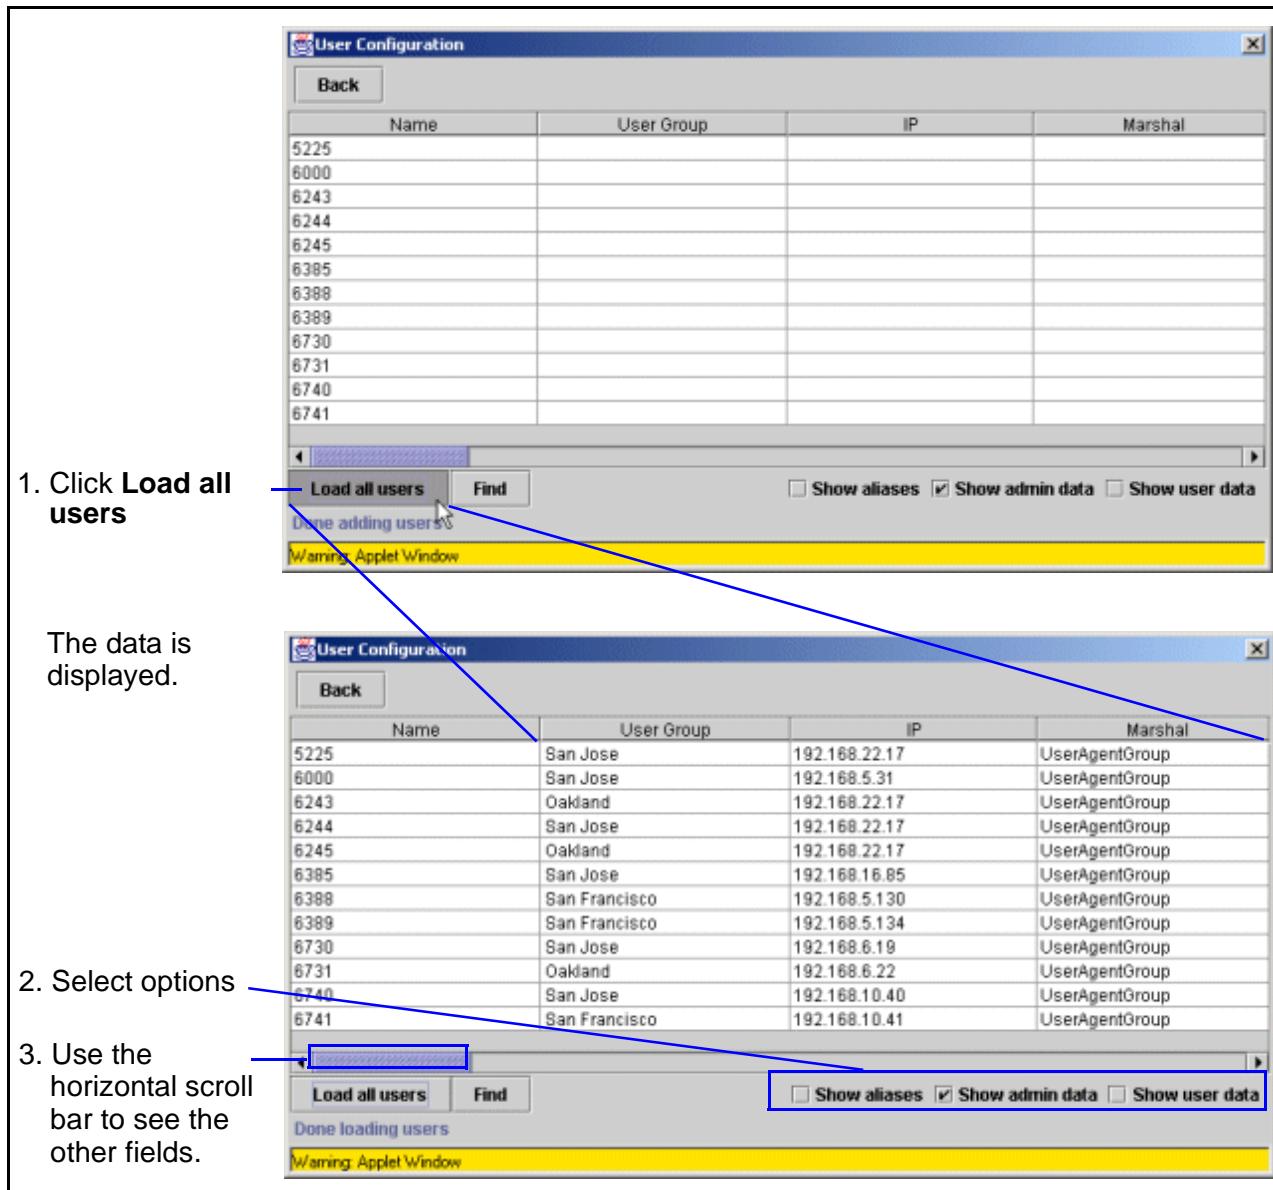

**Procedure:**  
**Viewing Data** **To load and view the data, follow these steps:**

***Table 1-12. Procedure for Viewing User Data on the User Configuration Screen***

<b>Step</b>	<b>Description</b>
<b>1</b>	Click <b>Load all users</b> . The user records are filled with data.
<b>2</b>	Select one or any combination of the following options: <ul style="list-style-type: none"><li>• Show aliases</li><li>• Show admin data</li><li>• Show user data</li></ul>
<b>3</b>	Use the horizontal scroll bar to view the data.

**Load All Users**

Figure 1-8 shows the use of the **Load all users** button.

**Figure 1-8. User Configuration Screen: Loading All Users**

## **Adding, Viewing, Editing, and Deleting Users**

### **Finding Users**

#### **Introduction**

You can highlight any of the users by clicking their record with the mouse. If you have thousands of users, the Find User utility will make your search easier.

#### **Procedure: Finding Users**

The **Find** button activates a program that automatically searches the Name column for the first match of your criteria as you type it in. For example, if you type a 6, the first name that starts with 6 will be highlighted. If you type 63, the first name that starts with 63 will be highlighted. You can continue typing in the user name until the desired name appears on the screen.

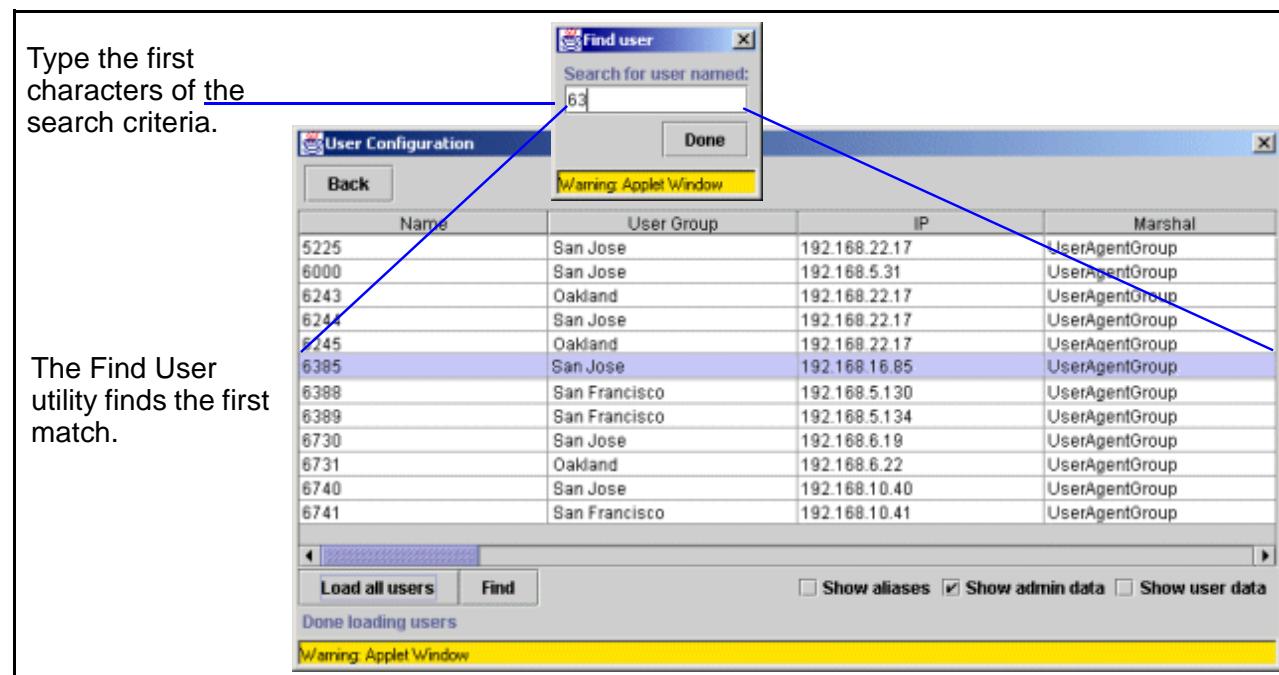

**To find users, follow these steps:**

**Table 1-13. Procedure—Finding Users**

<b>Step</b>	<b>Description</b>
<b>1</b>	Click <b>Find</b> . The Find Users dialog box appears.
<b>2</b>	Type the first characters of the name. The first instance of each character will be automatically selected in the list.
<b>3</b>	When you are finished searching, click <b>Done</b> .

#### **Screen Capture**

Figure 1-9 shows the use of the Find User utility.

**Figure 1-9. User Configuration Screen: Finding Users**

## Deleting Users

---

### Deleting User

To delete a user or multiple users, follow these steps:

**Table 1-14. Procedure for Deleting Users**

<b>Step</b>	<b>Action</b>
<b>1</b>	To select a user, left mouse click on a row in the table. To select multiple users, hold down the shift key while left mouse clicking the rows in the table.
<b>2</b>	Using the right mouse click, select <b>Delete</b> .

---

## **Editing Users: Administrator Controlled**

---

**Introduction** This section describes how to edit users.

---

**Procedure: Editing a User** **To edit a user, follow these steps:**

**Table 1-15. Procedure for Editing User**

<b>Step</b>	<b>Action</b>
<b>1</b>	Select the <b>Show admin data</b> option box.
<b>2</b>	Use the Left mouse click to select a user entry.
<b>3</b>	Right mouse click and select <b>Edit</b> . The Edit user screen appears.
<b>4</b>	Edit the fields and option boxes as required.
<b>5</b>	Select the OK button to save the entry.

---

**Procedure: Editing Multiple Users** **To edit multiple users, follow these steps:**

**Table 1-16. Procedure for Editing Multiple Users**

<b>Step</b>	<b>Action</b>
<b>1</b>	Select the <b>Show admin data</b> option box.
<b>2</b>	To select multiple users, hold down the shift key while left mouse clicking the rows in the table.
<b>3</b>	Right mouse click and select <b>Edit</b> . The Edit user screen appears.
<b>4</b>	Edit the fields and option boxes as required.
<b>5</b>	Select the OK button to save.

**■Note**

When you edit multiple users, only one edit user screen will appear. All selected users will have the same field and features settings.

---

## Editing User: Show Alias

---

<b>Introduction</b>	The aliases names associated with each users can be displayed using the show alias option box. User names with aliases appear in italics.
<b>What's an Alias?</b>	An alias is another address or phone number by which a user can be reached. A telephone call directed to the alias will terminate at the user's telephone. For example, in an office, a user's complete phone number might be 555-6024, but to provide for simple on-site dialing, 6024 can be set up as an alias to substitute for the full phone number.
<b>Selecting Show Alias</b>	If you select <b>Show Aliases</b> , then you must also select <b>Show Admin Data</b> or <b>Show User Data</b> as well. Selecting <b>Show Aliases</b> by itself is not allowed and returns an error.

---

## **Editing User Features: User Controlled**

### **Introduction**

The VOCAL system provides a web page for users to maintain some of their features. These features are call User Controlled Features and they include:

- JTAPI
- Forward all calls
- Call blocking
- Call screening
- Caller ID blocking
- Forward unanswered
- Forward busy

### **Procedure: Editing a User**

**To edit a user, follow these steps:**

**Table 1-17. Procedure for Editing User**

<b>Step</b>	<b>Action</b>
<b>1</b>	Select the <b>Show user data</b> option box.
<b>2</b>	Use the Left mouse click to select a user entry.
<b>3</b>	Right mouse click and select <b>Edit</b> . An Edit user screen appears.
<b>4</b>	Edit the fields and option boxes as required.
<b>5</b>	Select the OK button to save the entry.

### **Procedure: Editing Multiple User**

**To edit multiple users, follow these steps:**

**■ Note**

When you edit multiple users, only one edit user screen will appear. All selected users will have the same field and option box settings.

**Table 1-18. Procedure for Editing Multiple Users**

<b>Step</b>	<b>Action</b>
<b>1</b>	Select the <b>Show user data</b> option box.
<b>2</b>	To select multiple users, hold down the shift key while clicking the table rows.
<b>3</b>	Right-mouse click over the user records, and select <b>Edit</b> . The Edit screen appears.
<b>4</b>	Edit the fields and option boxes as required.
<b>5</b>	Select the OK button to save the entry.

## Editing User Feature: Edit User Screen

### Show User Data View

Figure 1-10 illustrates the edit user screen that appears when **Show user data** option box checked and the edit right mouse option is used. This screen displays features that can be enabled by the user. This screen is provided for the administrator to view the user's settings. If required, the administrator can modify the user's setting.

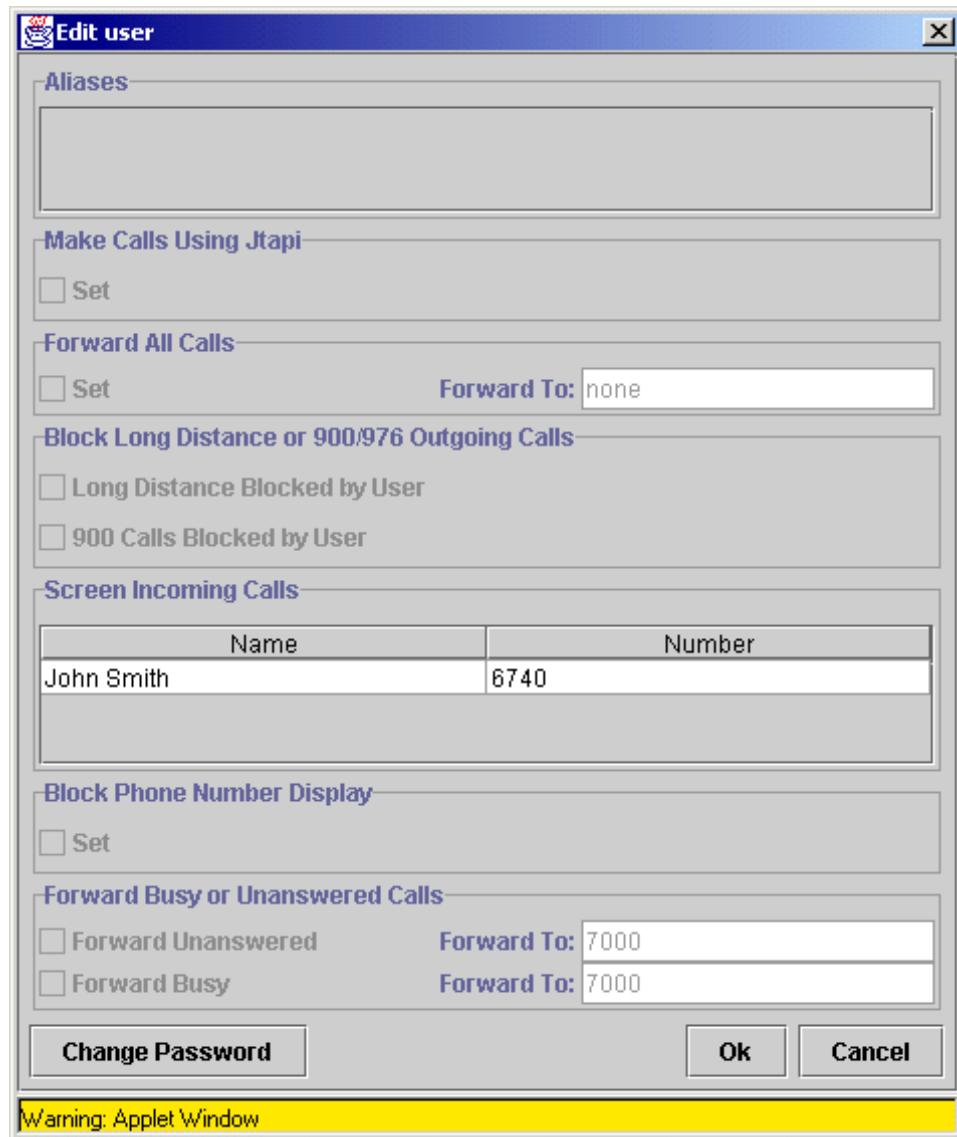

Figure 1-10. Edit User Screen: Show User Data

## **Adding, Viewing, Editing, and Deleting Users**

---

<b>Aliases</b>	This field displays aliases associated with this user.  <b>To add aliases for the user:</b> 1) Right mouse click over the Alias area and select add. 2) Type the alias name for the user. To remove aliases, right mouse click the alias name and select remove.
<b>JTAPI</b>	The user can use a JTAPI dial pad to place calls if the JTAPI set option box is checked.  <b>■Note</b> If the JTAPI option box is greyed out, this means that the Administrator has not enabled the JTAPI feature for the user.
<b>Forward All Calls</b>	The user can set Forward All Calls to redirect all incoming calls to a specific number.  <b>To turn on this feature:</b> 1) Check the <b>Set</b> option box. 2) Enter the user ID in the <b>Forward to</b> text box, for example, 7000.  <b>■Note</b> If the Set option box and the Forward to text box are greyed out, this means that the Administrator has not enabled the Forward All Calls feature for the user.
<b>Call Blocking</b>	The user can turn on call blocking for: <ul style="list-style-type: none"><li>• Long distance numbers—this prevents the user from dialing long distance numbered beginning with 1.</li><li>• 900 numbers—this prevents the user from dialing 900 numbers.</li></ul> <b>■Note</b> If the Long distance blocked by user and 900 calls blocked by user option boxes are greyed out, this means that the Administrator has not enabled these features for the user. For version 1.4.0 of VOCAL, long-distance call blocking only works for calls originating from the North American Numbering Plan (NANP). Calls cannot be blocked if they originate from Europe, Asia or other locations that are not part of the NANP.

<b>Call Screening</b>	The user can screen a call by name and number.
	<p><b>To add numbers to screen:</b></p> <ol style="list-style-type: none"><li>1) Right mouse click near the name and number box. Select Add.</li><li>2) A Screen Calls From dialog box appears. Enter the name and number to screen. Click OK. The format is the user ID, for example, 7000.</li><li>3) If you enter “6” in the number field, then all numbers beginning with 6 will be screened. Entering a specific phone number, such as, “408-555-1000” will screen only that phone number.</li></ol> <p>To remove a screened number, right mouse click near the name and number box and select Remove.</p> <p><b>■Note</b></p> <p>If the call screening table is greyed out, this means that the Administrator has not enabled this feature for the user.</p> <p>For version 1.4.0 of VOCAL, phone numbers entered for call screening must include the area code, regardless if they are local or long-distance phone numbers. Call Processing Language does not provide a pattern matching method that differentiates seven digit (local) phone numbers from ten digit (long-distance) numbers.</p>
<b>Caller ID Blocking</b>	The user can set Caller ID blocking to prevent the caller’s number or address from being delivered and displayed to the called party.
	<p><b>■Note</b></p> <p>If the Caller ID blocking option box is greyed out, this means that the Administrator has not enabled these features for the user.</p>
<b>Forward No Answer Busy</b>	The user can set Forward No Answer Busy to forward all incoming calls to another number if: <ul style="list-style-type: none"><li>• The user is busy—Forward Busy.</li><li>• The user if does not answer the call—Forward No Answer.</li></ul> <p><b>To turn on these features:</b></p> <ol style="list-style-type: none"><li>1) Check the Set option box.</li><li>2) Enter the number in the Forward to text box, for example, 7000.</li></ol>

## ***Adding, Viewing, Editing, and Deleting Users***

# 2

## Network Management

This chapter describes network management and statistics for the VOCAL system.

Topic	See Page
<b>SNMP Support .....</b>	<b>2-2</b>
MIBs .....	2-3
VOCAL SNMP GUI.....	2-5
VOCAL SNMP GUI Screen Elements .....	2-6

## SNMP Support

---

<b>Overview</b>	VOCAL supports Simple Network Management Protocol (SNMP) monitoring from: <ul style="list-style-type: none"><li>the VOCAL SNMP GUI - this supports monitoring of VOCAL server status.</li><li>a third party SNMP network manager.</li></ul>
<b>SNMP Version</b>	VOCAL supports SNMP version 2 (RFCs 1441 to 1452).

---

## MIBs

### Introduction

In a TCP/IP-based network, each device maintains a set of variables describing its state. In Simple Network Management Protocol (SNMP), these variables are known as objects, but these objects do not hold the same meaning as those within an object-oriented programming architecture. SNMP objects contain information about their state without any methods, other than the ability to read and write their values. A collection of SNMP objects are known as a Management Information Base (MIB).

As networks are built, they normally use several MIBs to describe the various structures within the overall architecture. It is more common for developers to use public MIBs for the non-proprietary components of their system and to build their own for the proprietary components.

### Public MIBs

The VOCAL system supports the following public MIBs:

#### RFC 1213 - MIB II

#### Network Services Monitoring MIB

VOCAL supports a subset of the network services monitoring MIBs defined in RFC 2788. This includes the minimum identifiers of applications for use in other MIBs as indexes.

For more information refer to this file in the Linux directory: /usr/local/vocal/proxies/netMgmt/NETWORK-SERVICES-MIB.txt.

#### SIP MIBs

VOCAL supports the initial version of Session Initiation Protocol (SIP) MIB dated July 2000 (draft-ietf-sip.mib-01.txt). The MIB is temporarily located under enterprise.vovida.vovidaTemporary until the MIB is assigned a permanent location by IANA. For more information refer to /usr/local/vocal/proxies/netMgmt directory for these SIP MIBs:

- SIP-COMMON-MIB.txt
- SIP-MIB-SMI.txt
- SIP-REGISTRAR-MIB.txt
- SIP-SERVER-MIB.txt
- SIP-TC.txt
- SIP-UA-MIB.txt

#### UCD Enterprise MIB

VOCAL supports and implements the UCD Enterprise MIBs. For additional information, refer to this web site:

<http://net-snmp.sourceforge.net>

---

<b>VOCAL Enterprise MIB</b>	For more information refer to the /usr/local/vocal/proxies/netMgnt directory:
	<ul style="list-style-type: none"><li>• VOVIDA-LOCAL-GRP-MIB.txt</li><li>• VOVIDA-NOTIFICATIONS-MIB.txt</li><li>• VOVIDA-SERVERGRP-MIB.txt</li><li>• VOVIDA-SOFTSWITCHSTATS-MIB.txt</li><li>• VOVIDA-SUBSCRIBERSTATS-MIB.txt</li></ul>

---

## VOCAL SNMP GUI

### Server Status Monitoring

Each VOCAL system server sends (via multicast) heartbeat packets to its peers at a predefined interval. The Heartbeat Server monitors the exchange of heartbeat packets between VOCAL servers and sends server status trap messages to the network management system. The network management system displays server status on the VOCAL SNMP GUI.

### VOCAL SNMP GUI

Figure 2-1 illustrates an example of the VOCAL SNMP GUI. Access the VOCAL SNMP GUI from the URL:

<http://<hostname of the provisioning server>/<system name>/index.html>

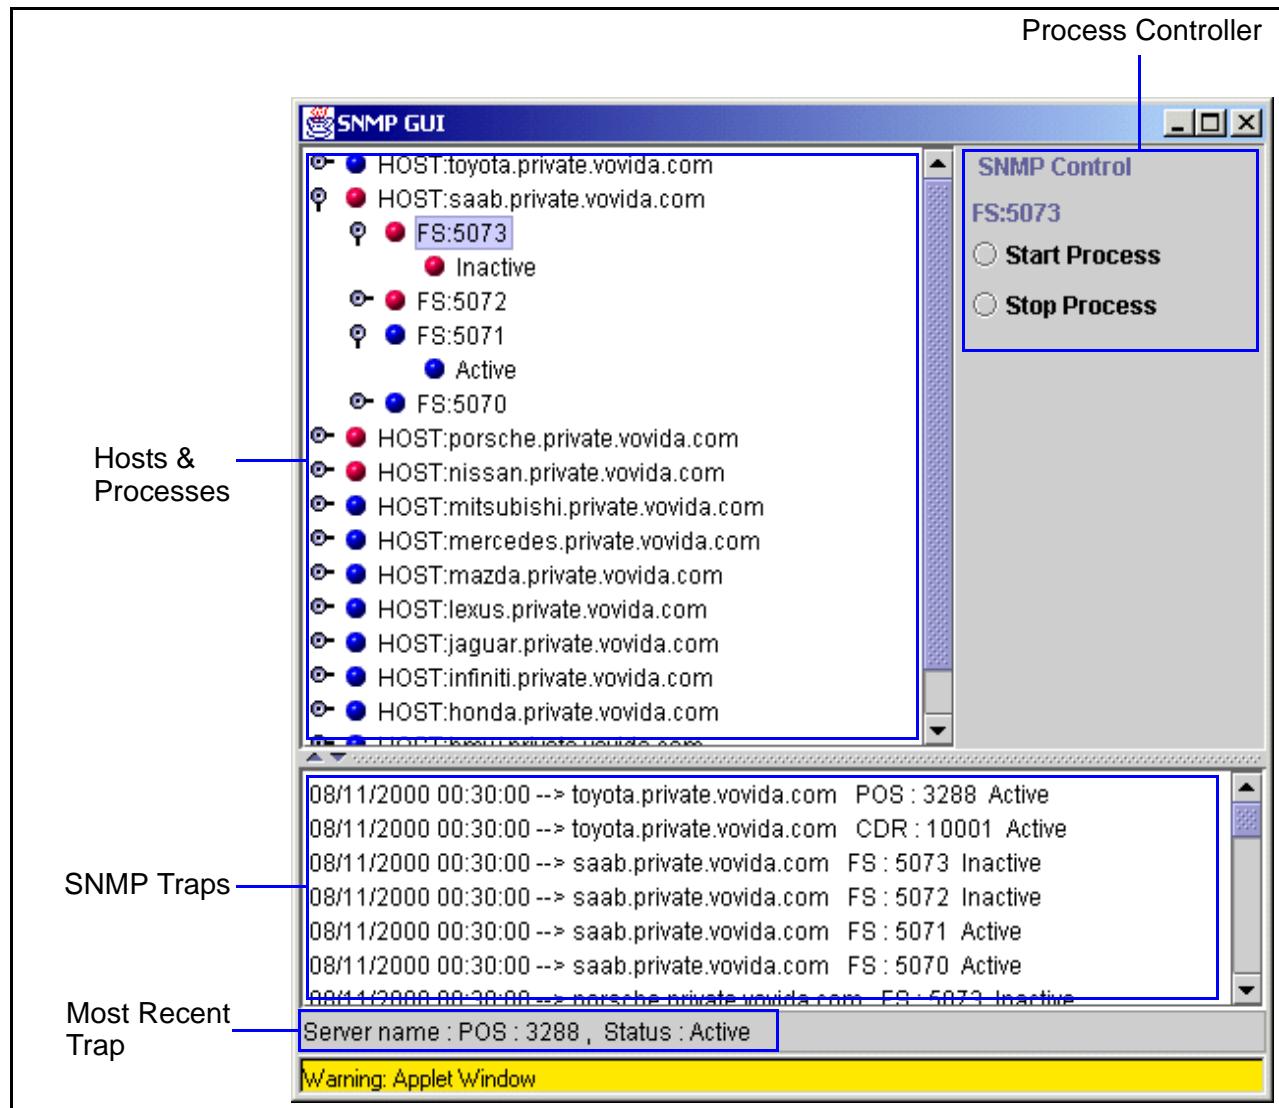

Figure 2-1. VOCAL SNMP GUI Screen

## VOCAL SNMP GUI Screen Elements

---

<b>Hosts &amp; Processes</b>	This frame displays the host server and indicates whether they are active (blue) or inactive (red). If a host server contains several processes, it will display a red ball if one or more of the processes is inactive.
<b>SNMP Controller</b>	The process controller allows you to start or stop the SNMP control process.  <b>To start or stop the process controller, follow these steps:</b> <ol style="list-style-type: none"><li>1) From the Host View, select a hostname and select a process.</li><li>2) Select <b>Start Process</b> to begin the SNMP control or <b>Stop Process</b> to stop the SNMP Process.</li></ol> <p><b>Note</b> The process or function running on each host server is listed under each hostname. When the process is selected, the process abbreviation and port number appear above the <b>Start Process</b> and <b>Stop Process</b> buttons. Processes or functions are abbreviated as:</p> <ul style="list-style-type: none"><li>• FS - Feature Server</li><li>• MS - Marshal Server</li><li>• POS - Policy Server</li><li>• RS -Redirect Server</li><li>• CDR - Call Detail Record Server</li><li>• PS - Provisioning Server</li></ul> <p><b>Note</b> There is no warning prompt for starting or stopping processes. If you select a process, and click either <b>Start Process</b> or <b>Stop Process</b>, the instruction is sent immediately to the host.</p>
<b>SNMP Traps</b>	The SNMP Traps screen displays SNMP traps from the system with timestamps. Traps are used to report unexpected events, such as a server crashing. Trap is a conventional term that comes from the early developers of SNMP.
<b>Most Recent SNMP Trap</b>	Displays the server name and status of the most recent trap.

---

# A

## Features

This chapter describes features supported by the VOCAL system.

Topic	See Page
Features .....	A-2
Core System Features .....	A-3
Set-Based Features .....	A-5

# Features

---

**Introduction** This section describes the types of feature supported by the VOCAL system.

---

**Overview** The VOCAL system supports two types of features—core system features and set-based features.

## **Core System Features**

Core system features are those that involve rerouting calls under certain conditions, such as the called party is busy, or the phone number being called is forbidden.

## **Set-Based Features**

Set-based features are those that require functions to be built into the phone sets to interpret information coming from the SIP messages. For example, SIP messages contain Caller ID information, but the phone cannot make use of it unless it has a Caller ID Display.

## Core System Features

### Types of Core System Features

There are two types of system features—calling features and called features. The calling features are assigned to the call originator. The called features are assigned to the calling destination.

<b>Calling Features</b>	<b>Called Features</b>
Call Blocking	Forward All Calls
Caller ID Blocking	Forward Busy
	Forward No Answer
	Call Return
	Call Screening
	Meet-Me Conferencing
	Voice Mail

### Call Blocking

The administrator or the user can turn on call blocking for:

- Long distance numbers—this prevents the user from dialling long distance numbered beginning with 1.
- 900 numbers—this prevents the user from dialling 900 numbers.

■ **Note**

For version 1.4.0 of VOCAL, activating call blocking for long distance numbers unblocks 1-8xx phone numbers. This includes toll-free as well as regular 8xx area codes such as 801 and 802.

Also, for version 1.4.0 of VOCAL, long-distance call blocking only works for calls originating from the North American Numbering Plan (NANP). Calls cannot be blocked if they originate from Europe, Asia or other locations that are not part of the NANP. For more information about the NANP, see [www.nanpa.com](http://www.nanpa.com).

### Caller ID Blocking

The Caller ID blocking feature can be enabled for the user. With Caller ID blocking, the user's number and name will not be delivered or displayed on the called party's display equipment or application.

### Forward All Calls

The Forward All Calls feature redirects all incoming calls to a specified, alternate number or voice messaging system.

### Forward No Answer and Forward Busy

Forward No Answer Busy features allows redirecting of all incoming calls to another number if:

- The user is busy—Forward Busy.
- The user if does not answer the call after a specified number of rings—Forward No Answer.

## **Core System Features**

For example, Forward No Answer Busy feature can be used to redirect incoming calls to the voice messaging system or alternate number if the user is busy or does not answer.

---

### **Call Return**

Call return allows the user to call back the last caller. The user can either dial \*69 to dial up the last caller or select from a list of callers on his or her phone.

---

### **Call Screening**

Call screening allows the user to block calls from a list of numbers. For example, when an screened number calls the user, the caller will receive a busy signal. When call screening is enabled the user's phone set will not ring for a screened number.

#### **■Note**

For version 1.4.0 of VOCAL, phone numbers entered for call screening must include the area code, regardless if they are local or long-distance phone numbers. Call Processing Language does not provide a pattern matching method that differentiates seven digit (local) phone numbers from ten digit (long-distance) numbers.

---

### **Meet-Me Conferencing**

A conference bridge is provided with a well-known phone number. Users agree to call the well-known phone number at the same time, and are linked up together in the same audio path. The linking is a function of the conference bridge.

---

### **Unified Messaging**

The VOCAL system provides a unified messaging system whereby voicemail messages are converted into wave files and sent to the users attached to e-mail messages.

---

## Set-Based Features

---

<b>Definition</b>	<p>Set based features are features that a user can enable from a phone set. These features are an example of how SIP-based networks are able to transfer much of its intelligence to its end-points.</p> <p>Many SIP IP phone sets have a variety of “smart” features. The VOCAL system supports the following set-based features:</p> <ul style="list-style-type: none"> <li>• Call Transfer</li> <li>• Calling Number Delivery</li> <li>• Calling Name Delivery</li> <li>• Caller ID</li> <li>• Call Waiting</li> <li>• AdHoc Conferencing</li> </ul>
<b>Transfer</b>	<p>The Transfer key on a phone set allows the user to direct a call to another number or person. There are two types of transfers:</p> <ul style="list-style-type: none"> <li>• Consult Transfer -With consult transfer you consult the other party before transferring the call. To consult transfer a caller, you would press the transfer button to place the caller on hold. You will hear a dial tone and can dial the number you want to transfer the call to. Wait until the other party answers the call and inform them you are transferring the call. Press the transfer button on the phone set to complete the transfer.</li> <li>• Blind Transfer—With blind transfer you transfer the caller to another party without announcing the caller to the called party. To blind transfer a caller, you would press transfer to place the caller on hold. You will hear a dial tone and can dial the number you want to transfer the call to. Pressing transfer after dialling the number will immediately transfer the call.</li> </ul>
<b>■Note</b>	<p>Some analog phones, which are attached to IP gateways, use a “flashback” key in place of a “transfer” key.</p>
<b>Calling Number Delivery</b>	Calling Number Delivery, or commonly called Call Display Number, provides the called party with the number of the caller, the date and time of call.
<b>Calling Name Delivery</b>	Calling Name Delivery, or commonly called Call Display Name, provides the called party with the name of the caller, the date and time of call.
<b>Caller ID</b>	Caller ID requires display equipment or application. The name and/or number of the caller are displayed on the called party's display equipment or application.
<b>Call Waiting</b>	Call waiting allows a user to receive an incoming call while the user is on another call. The user places the first call on hold while answering the second call.

## ***Set-Based Features***

---

### **AdHoc Conferencing**

The Conference key on a phone set allows the user to set up a conference call with a number of people. To set up a conference call:

- Call the first person. Press the conference button to place the first caller on hold.
  - Call the second person. Press the conference button to add the second caller to the call.
  - Repeat until all callers are added to the call.
-

# B

## Supported SIP Messages

Topic	See Page
SIP Request Messages .....	B-2
SIP Response Messages .....	B-3

## SIP Request Messages

---

**Supported SIP Request Messages** The VOCAL system supports these SIP request messages:

**Table B-1. SIP Request Messages Descriptions**

<b>SIP Request Messages</b>	<b>Descriptions</b>
INVITE	Indicates that the user or service is being invited to participate in a session.
ACK	Confirms that the client has received a final response to an INVITE request.
BYE	Indicate the user wishes to terminate the call.
CANCEL	Cancels a pending request but does not affect a completed request.
REGISTER	Register the address listed in the To header field with a SIP server.
OPTIONS	Queries the capability of the servers.
INFO	Allows for the carrying of the session related control information that is generated during a session.

---

# SIP Response Messages

---

<b>SIP Response Messages Category</b>	The VOCAL system supports all SIP response messages: <ul style="list-style-type: none"><li>• 1xx Responses - Information Responses</li><li>• 2xx Responses - Successful Responses</li><li>• 3xx Responses - Redirection Responses</li><li>• 4xx Responses - Request Failures Responses</li><li>• 5xx Responses - Server Failure Responses</li><li>• 6xx Responses - Global Failure Responses</li></ul>
<b>For More Information</b>	Refer to the SIP RFC 2543 for a list of the status codes and their reason codes: <a href="http://www.ietf.org/rfc/rfc2543.txt">http://www.ietf.org/rfc/rfc2543.txt</a>
<b>1xx and 2xx Responses</b>	1xx SIP response message are informational responses: <ul style="list-style-type: none"><li>• 100 Trying</li><li>• 180 Ringing</li><li>• 181 Call Is Being Forwarded</li><li>• 182 Queued</li><li>• 183 Session Progress</li><li>• 200 OK</li></ul>
<b>3xx Responses</b>	3xx SIP response message are redirection responses: <ul style="list-style-type: none"><li>• 300 Multiple Choices</li><li>• 301 Moved Permanently</li><li>• 302 Moved Temporarily</li><li>• 303 See Other</li><li>• 305 Use Proxy</li><li>• 380 Alternative Service</li></ul>
<b>4xx Responses</b>	4xx SIP response message are client error responses: <ul style="list-style-type: none"><li>• 400 Bad Request</li><li>• 401 Unauthorized</li><li>• 402 Payment Required</li><li>• 403 Forbidden</li><li>• 404 Not Found</li><li>• 405 Method Not Allowed</li><li>• 406 Not Acceptable</li><li>• 407 Proxy Authentication Required</li><li>• 408 Request Timeout</li></ul>

## **SIP Response Messages**

- 409 Conflict
  - 410 Gone
  - 411 Length Required
  - 413 Request Entity Too Large
  - 414 Request-URI Too Large
  - 415 Unsupported Media Type
  - 420 Bad Extension
  - 480 Temporarily not available
  - 481 Call Leg/Transaction Does Not Exist
  - 482 Loop Detected
  - 483 Too Many Hops
  - 484 Address Incomplete
  - 485 Ambiguous
  - 486 Busy Here
- 

### **5xx Responses**

5xx SIP response message are server error responses:

- 500 Internal Server Error
  - 501 Not Implemented
  - 502 Bad Gateway
  - 503 Service Unavailable
  - 504 Gateway Time-out
  - 505 SIP Version not supported
- 

### **6xx Responses**

6xx SIP response message are global failure responses:

- 600 Busy Everywhere
  - 603 Decline
  - 604 Does not exist anywhere
  - 606 Not Acceptable
-

## SIP Phone: Registration

**Call Scenario** Figure C-1 illustrates a SIP phone registering with the Marshal server.

**Authentication Methods** There are three registration methods, no authentication, access list authentication or digest authentication. Table C-1 shows the authentication criteria used by each method.

**Table C-1. Authentication Methods and Criteria**

<b>Method</b>	<b>Authentication Criteria</b>
No Authentication	None
Access List	User's IP Address
Digest	User's name and password

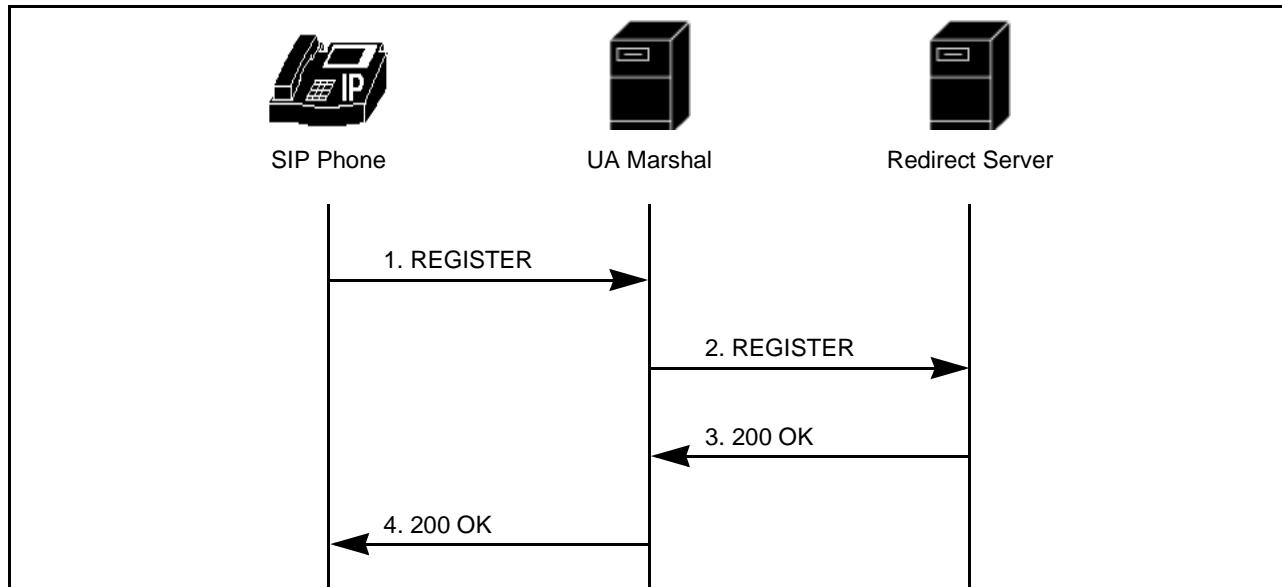

**Figure C-1. Registration**

## Registration: Access List Authentication

### Call Flow Diagram

Figure C-2 shows a SIP IP phone registering with the Redirect server. The User Agent Marshal server is using the Access List authentication method.

**Figure C-2. Call Flow Diagram: SIP Phone Registration**

### Call Trace

The following trace shows a SIP IP phone registering with the Redirect server. The User Agent Marshal server is using the Access List authentication method.

```

## SIP IP Phone to SIP IP Phone: Call Setup and Disconnect

### Call Scenario

Figure C-4 illustrates a call between two, on-network SIP IP phones.

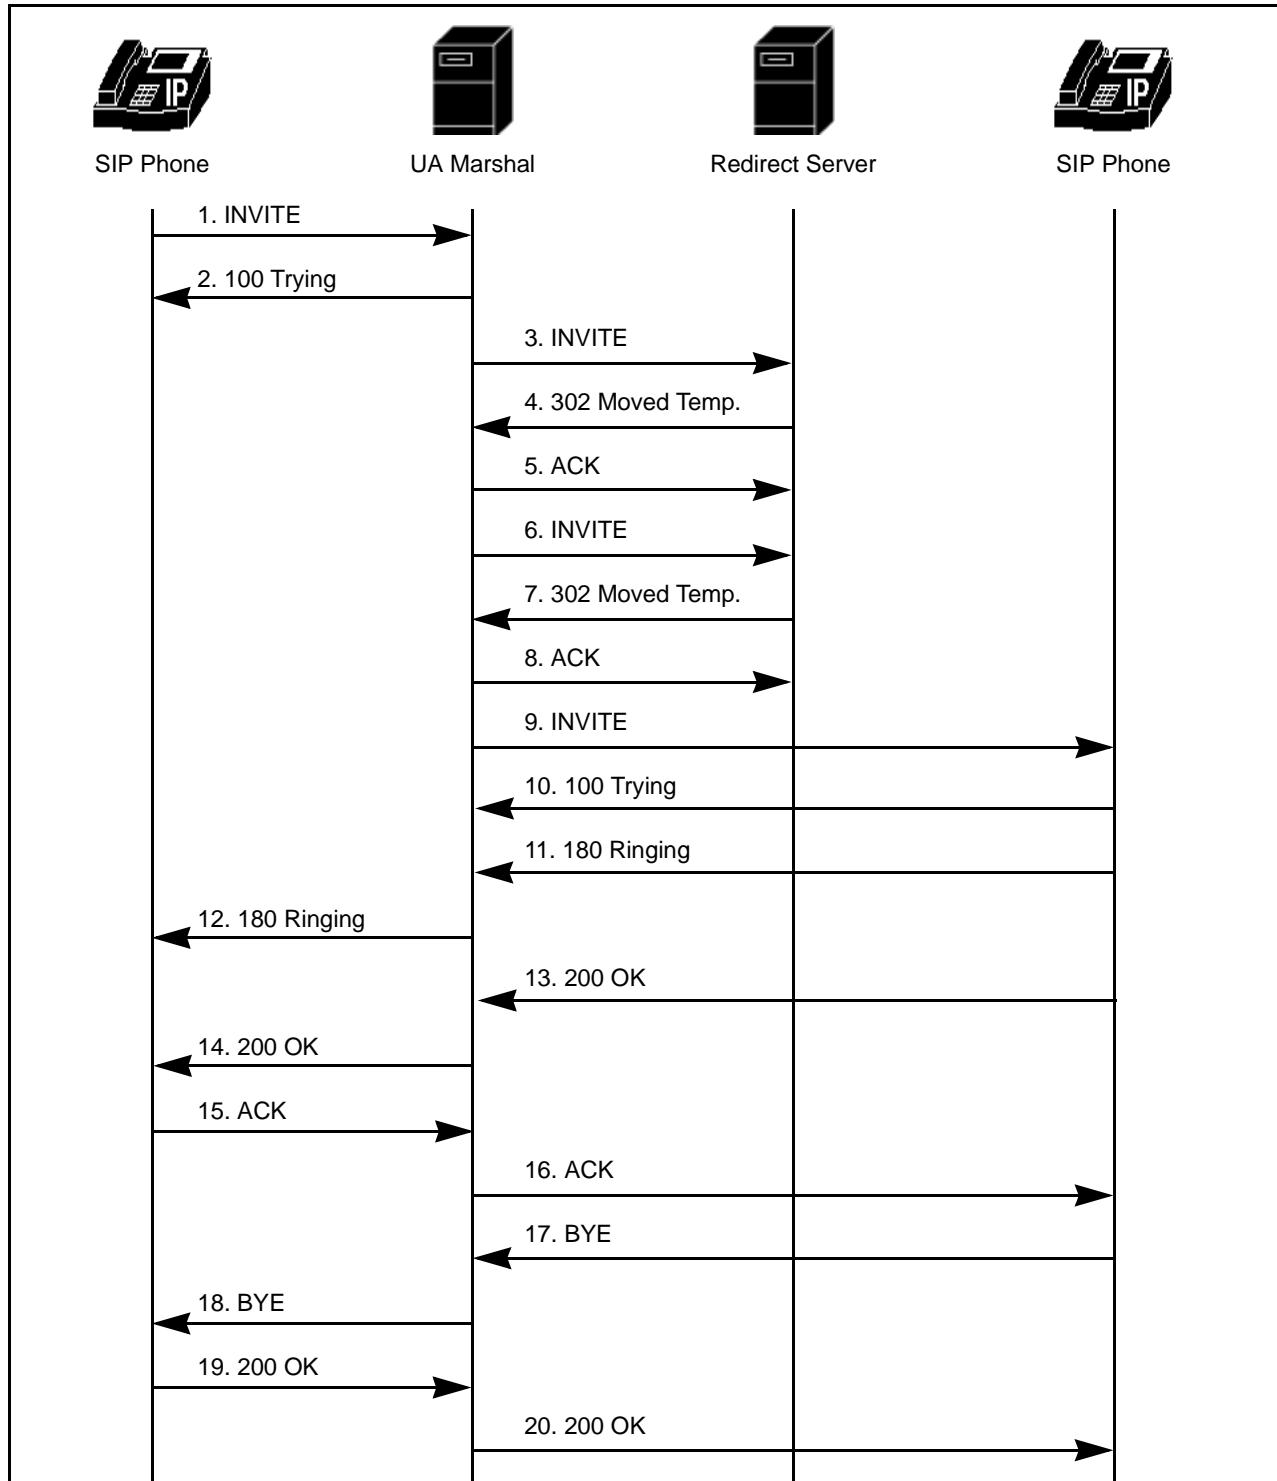

**Figure C-4. SIP Phone to SIP Phone**

### Call Flow Diagrams

Figure C-5 shows a successful call setup between two, on-network SIP IP phones. In this example, the called party terminates the call.

## SIP IP Phone to Analog Phone via Gateway

### Call Scenario

Figure C-6 illustrates a SIP phone to analog phone call made over an IP network via a gateway.

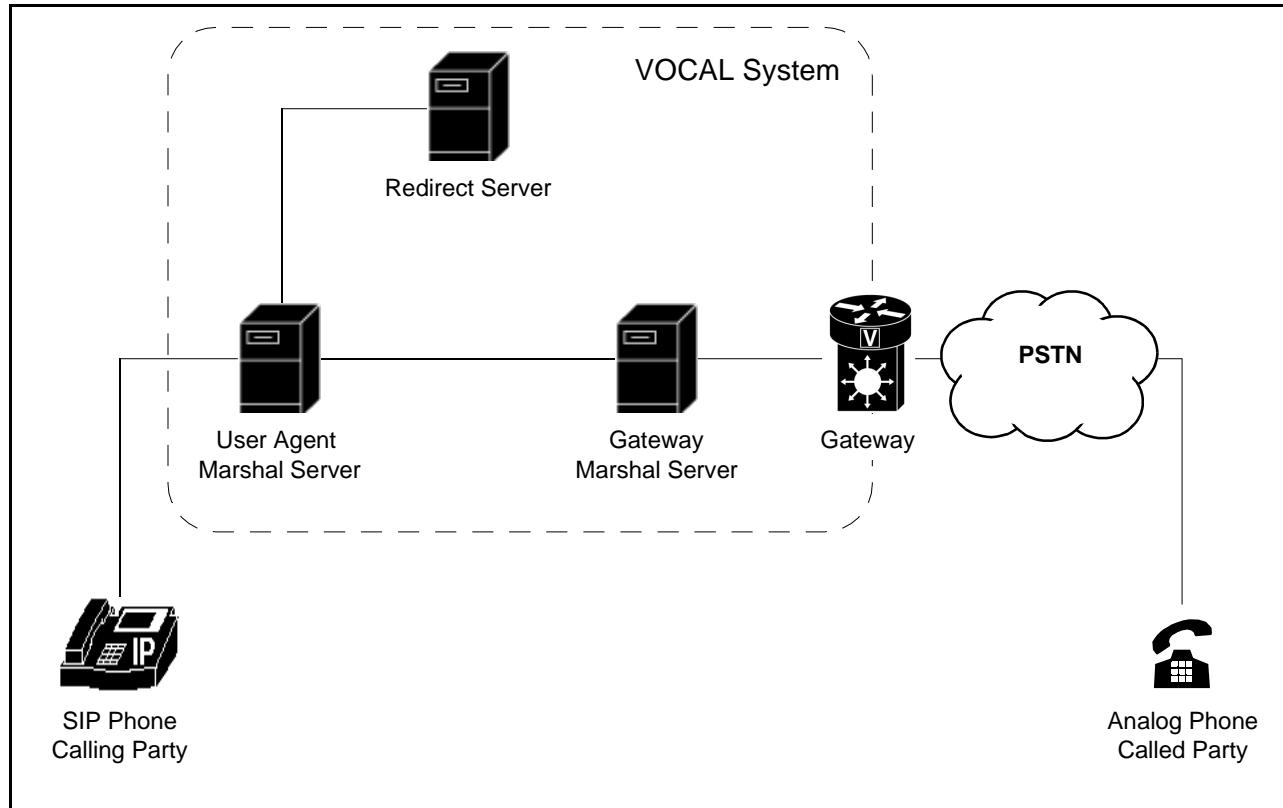

Figure C-6. SIP IP Phone to Analog Phone via Gateway

### Call Flow Diagram

Figures C-7 and C-7 show a call originating from an on-network SIP phone and being routed through a gateway to the PSTN.

### SIP IP Phone to Analog Phone via Gateway

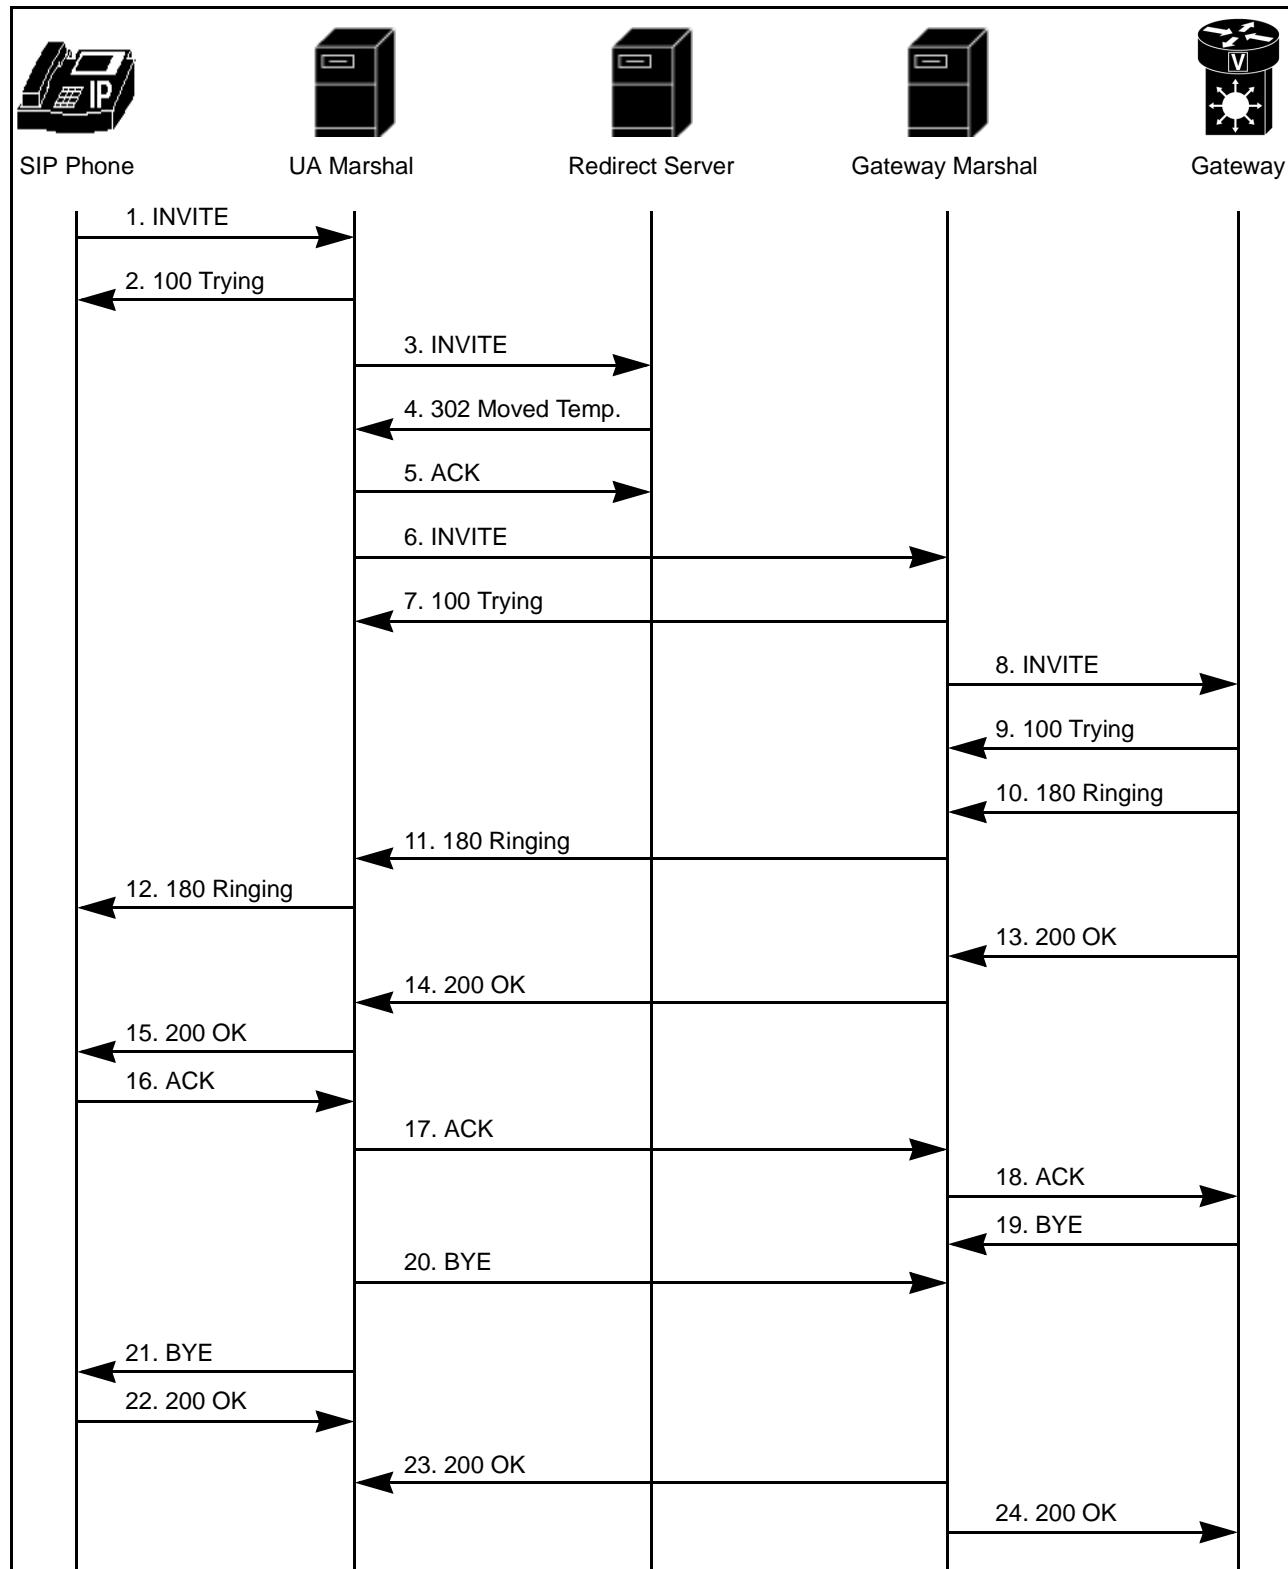

Figure C-7. Call Flow Diagram: SIP IP Phone to SIP IP Phone via SIP Gateway

**Call Trace**

The following trace shows a call originating from an on-network SIP phone and being routed through a gateway to the PSTN.

```

## SIP Phone to Phone via Gateway: Called Party is Busy

### Call Scenario

Figure C-8 illustrates User A initiating a call to User B while User B is busy.

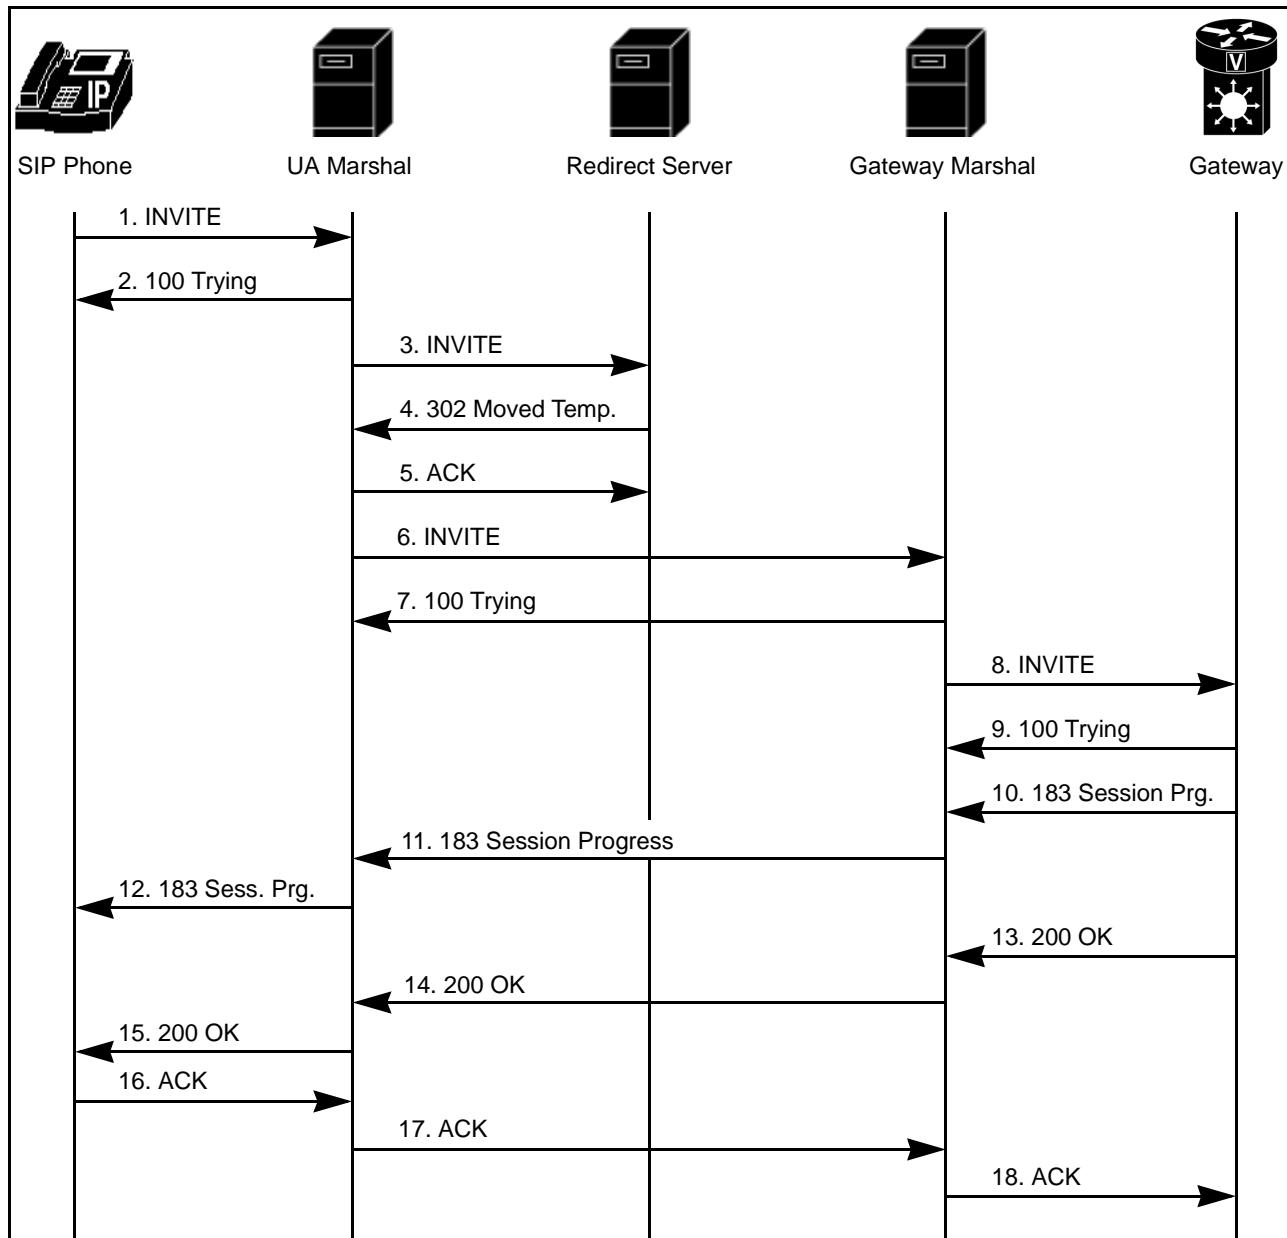

**Figure C-8. SIP Phone to Phone: Called Party is Busy**

### Call Flow Diagram

Figure C-9 shows a call originating from an on-network SIP phone, being routed through a gateway to the PSTN, and returning a busy signal.

## **SIP Phone to Phone via Gateway: Called Party is Busy**

**Figure C-9. Call Flow Diagram: SIP Phone to Phone: Called Party is Busy**

## SIP Phone to Phone via Gateway: Called Party is Busy

### Call Trace

The following call trace shows a call originating from an on-network SIP phone, being routed through a gateway to the PSTN, and returning a busy signal.

## SIP IP Phone to SIP IP Phone: Forward All Calls

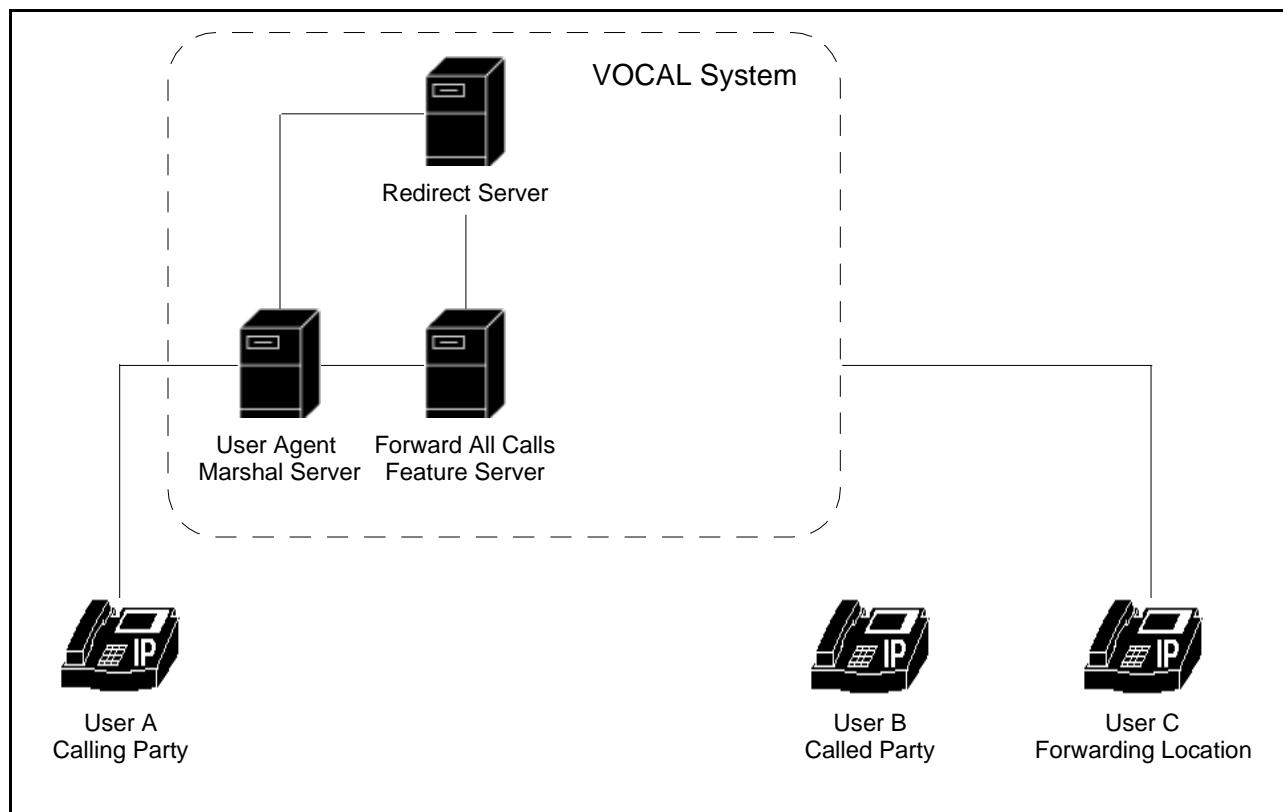

### Call Scenario

Figure C-10 illustrates the following call scenario:

- User A initiates a call to User B
- User B has call forwarding enabled
- The call is forwarded to User C

#### ■ Note

In this example, all SIP phones are connected to the same Marshal server.

*Figure C-10. SIP IP Phone to SIP IP Phone: Forward All Calls*

### Call Flow Diagrams

Figure C-11 shows a call originating from an on-network SIP IP phone being forwarded to a call forward destination.

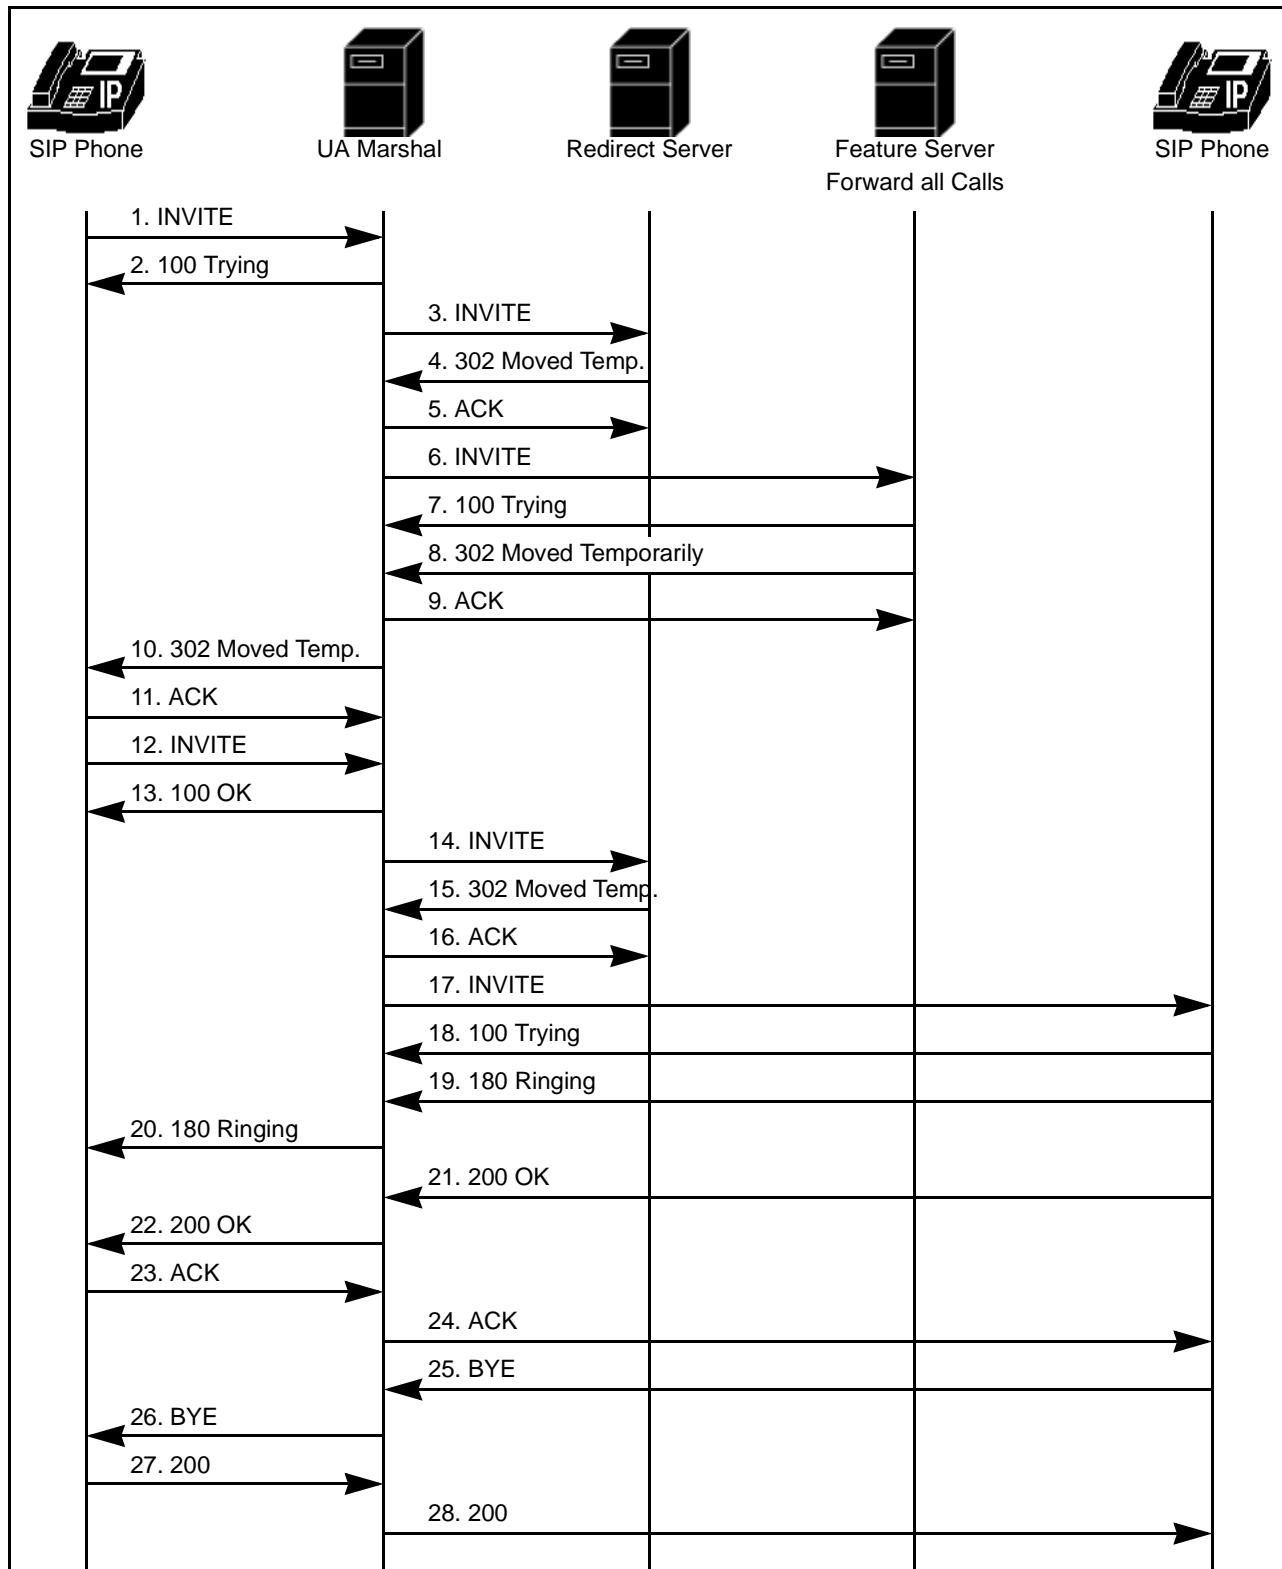

Figure C-11. Call Flow Diagram: SIP IP Phone to SIP IP Phone: Forward All Calls — Diagram 1

## SIP IP Phone to SIP IP Phone: Forward All Calls

### Call Trace

The following call trace shows a call originating from an on-network SIP IP phone being forwarded to a call forward destination.

## Phone to SIP Phone via Gateway: Call Screening

### Call Scenario

Figure C-12 illustrates the following call scenario:

- User A initiates a call to User B
- User B has call screening enabled
- The feature server screens the call and returns a forbidden call message back to the gateway.

**Figure C-12. SIP IP Phone to Phone: Call Screening**

### Call Flow Diagram

Figure C-13 shows a call, originating from an on-network SIP IP phone, being screened by the feature server.

### Phone to SIP Phone via Gateway: Call Screening

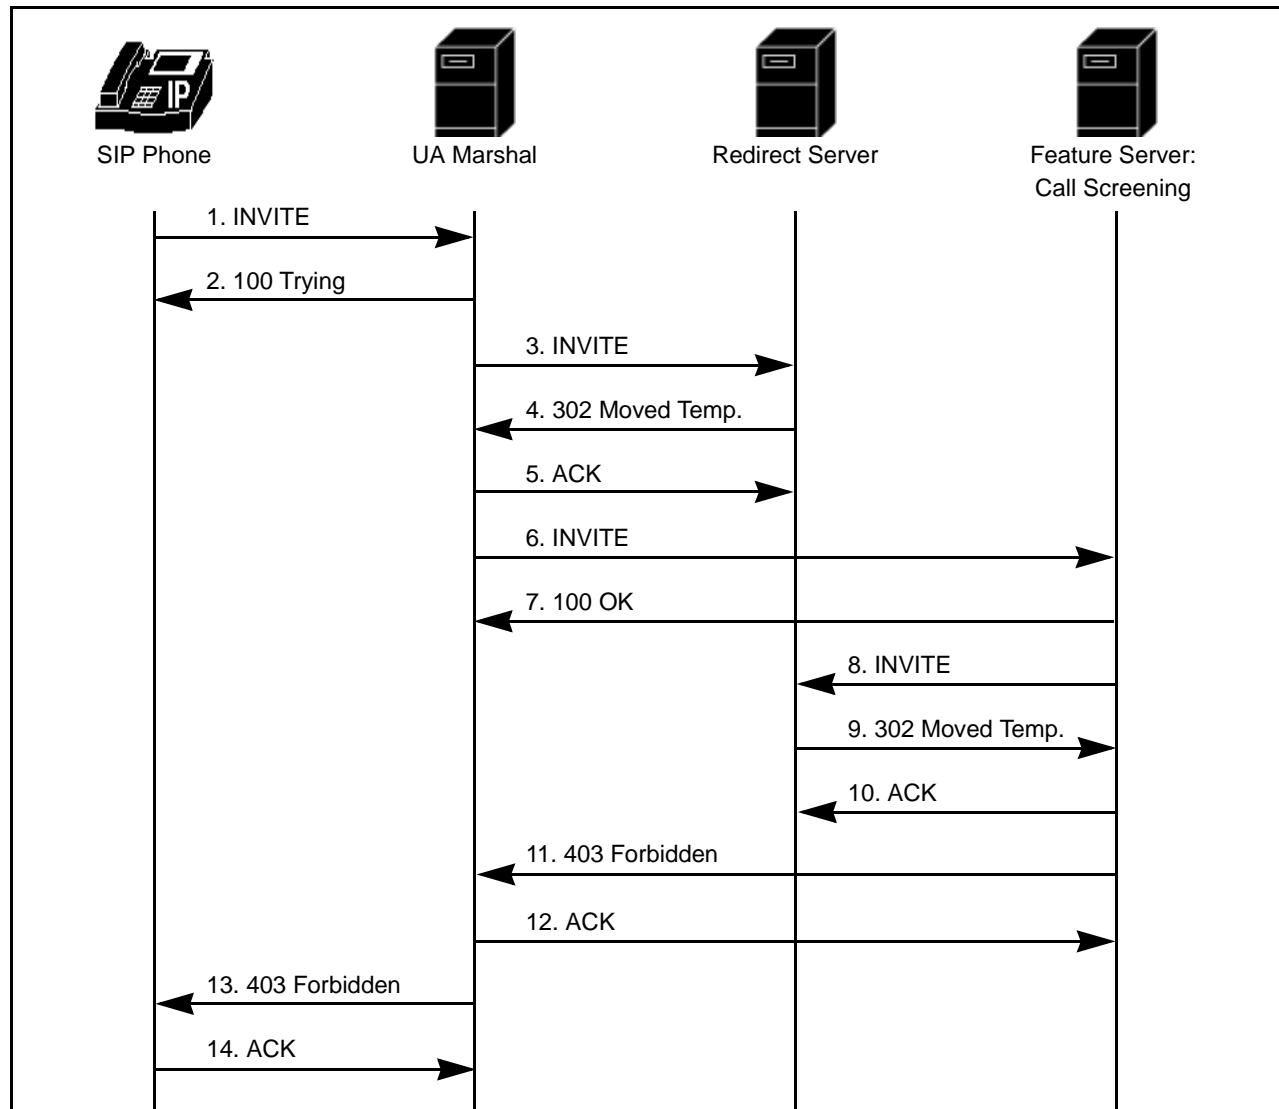

Figure C-13. Call Flow Diagram: Call Screening

## Call Trace

The following call trace shows a call, originating from an on-network SIP IP phone, being screened by the feature server.

```

## SIP Phone to PSTN: Call Blocking

### Call Scenario

Figure C-12 illustrates the following call scenario:

- User A initiates a long distance or 1-900 number call
- The VOCAL System blocks the call

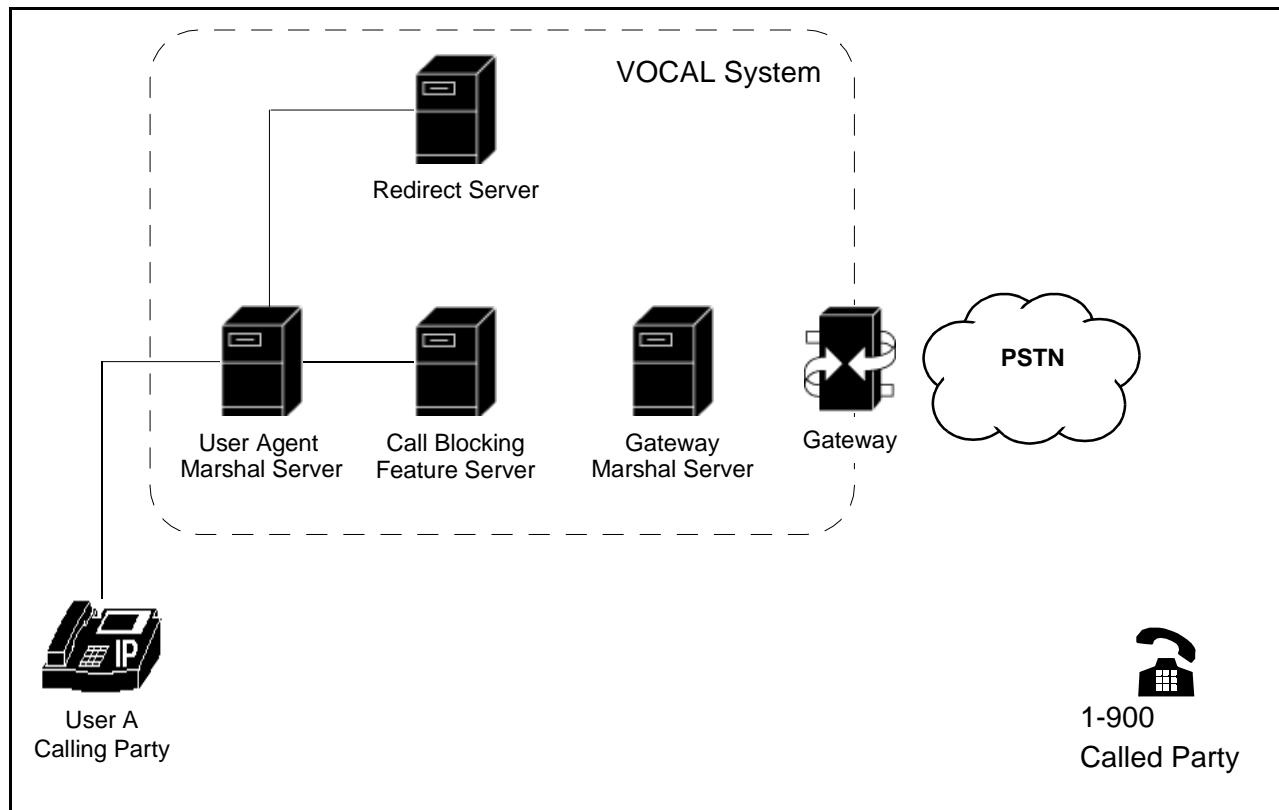

Figure C-14. SIP IP Phone to Phone: Call Blocking

### Call Flow Diagram

Figure C-15 shows a call, originating from an on-network SIP IP phone, being blocked by the feature server.

### SIP Phone to PSTN: Call Blocking

## SIP IP Phone to SIP IP Phone: Call Return

### Call Scenario

Figure C-16 illustrates the following call scenario:

- User A dials \*69 to determine the last number that was called, User B
- User A calls User B

**Figure C-16. SIP Phone to SIP Phone: Call Return**

### Call Flow Diagram

Figures C-17, C-18 and C-19 show a call return request leading to an established call between two on-network SIP IP phones.

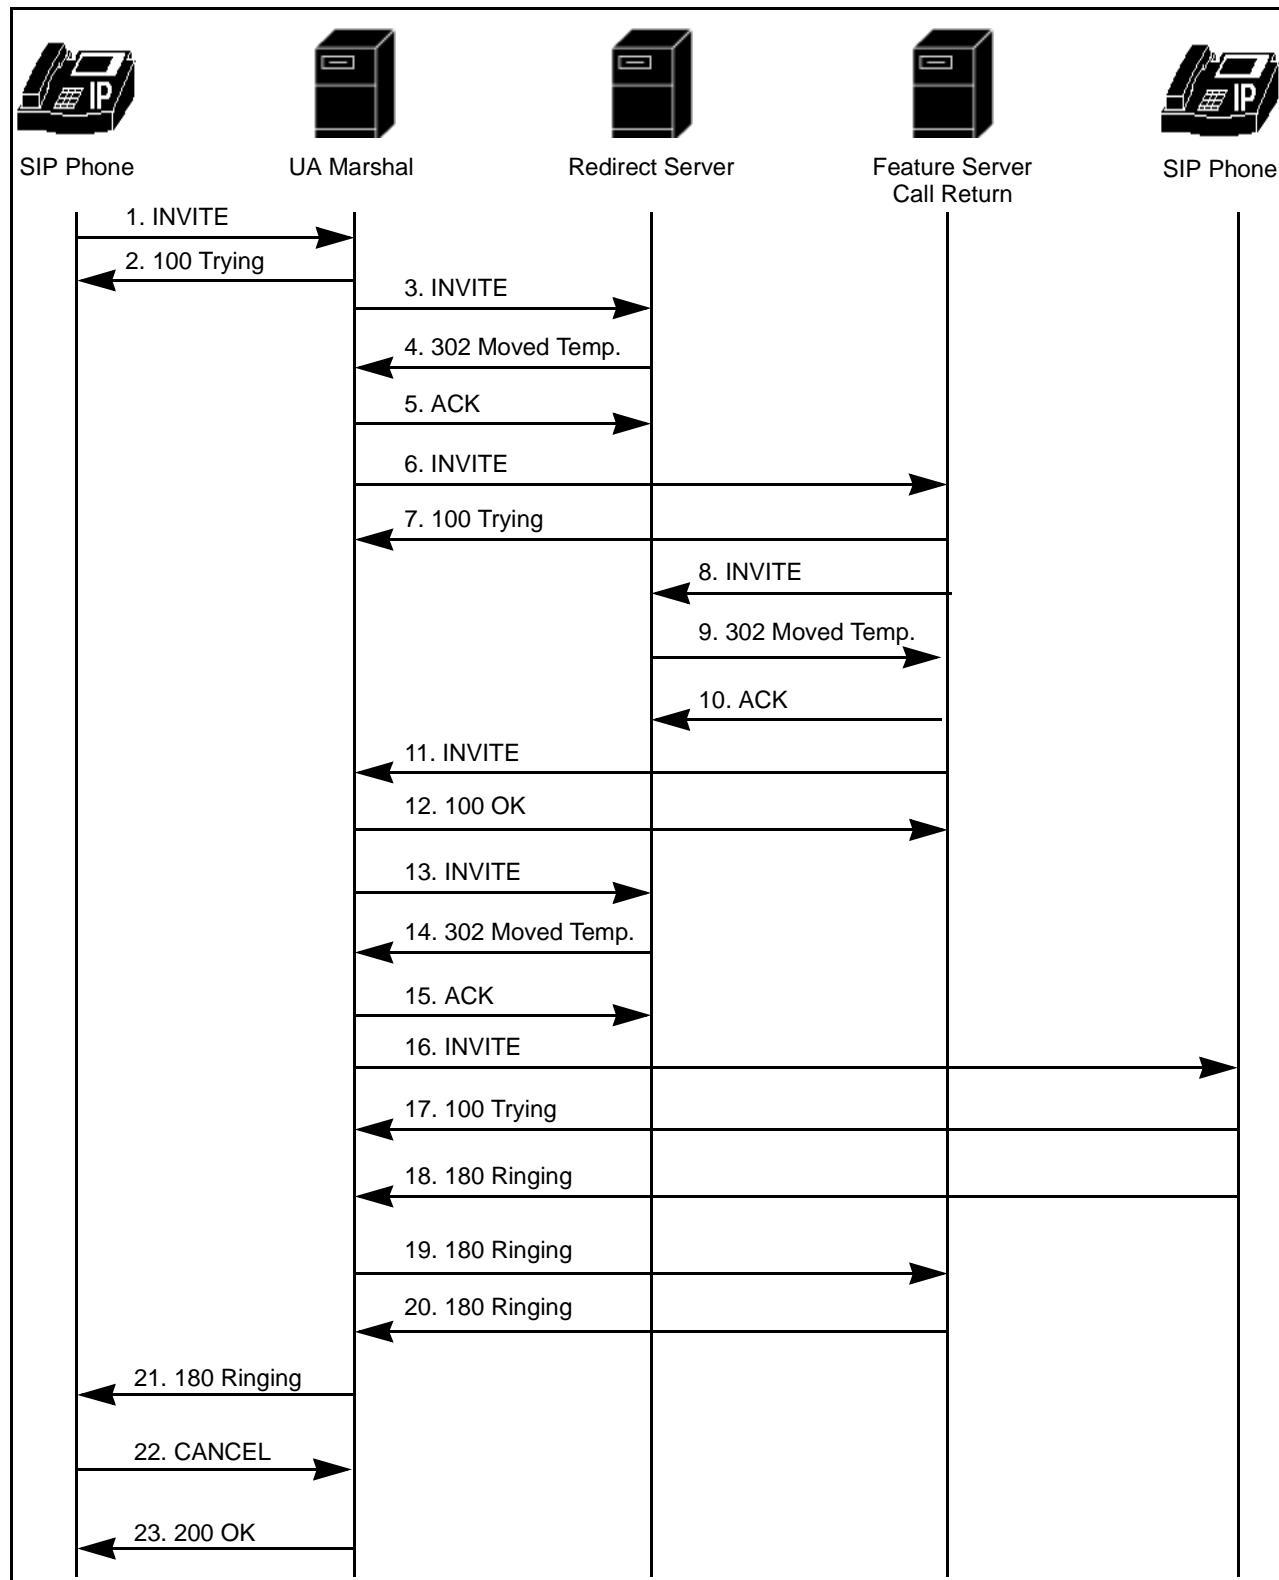

Figure C-17. SIP IP Phone to SIP IP Phone: Call Return — Diagram 1

### SIP IP Phone to SIP IP Phone: Call Return

## User Agent to User Agent: Call Waiting

### Call Scenario

Figure C-20 illustrates the following call scenario:

- User A calls User B
- While Users A and B are in conversation, User C calls User A
- User A is notified that another caller attempting to connect

**Figure C-20. User Agent to User Agent: Call Waiting**

### Call Flow Diagram

Figures C-21 and C-22 show a third party attempting to connect to a phone that is engaged in conversation with another phone.

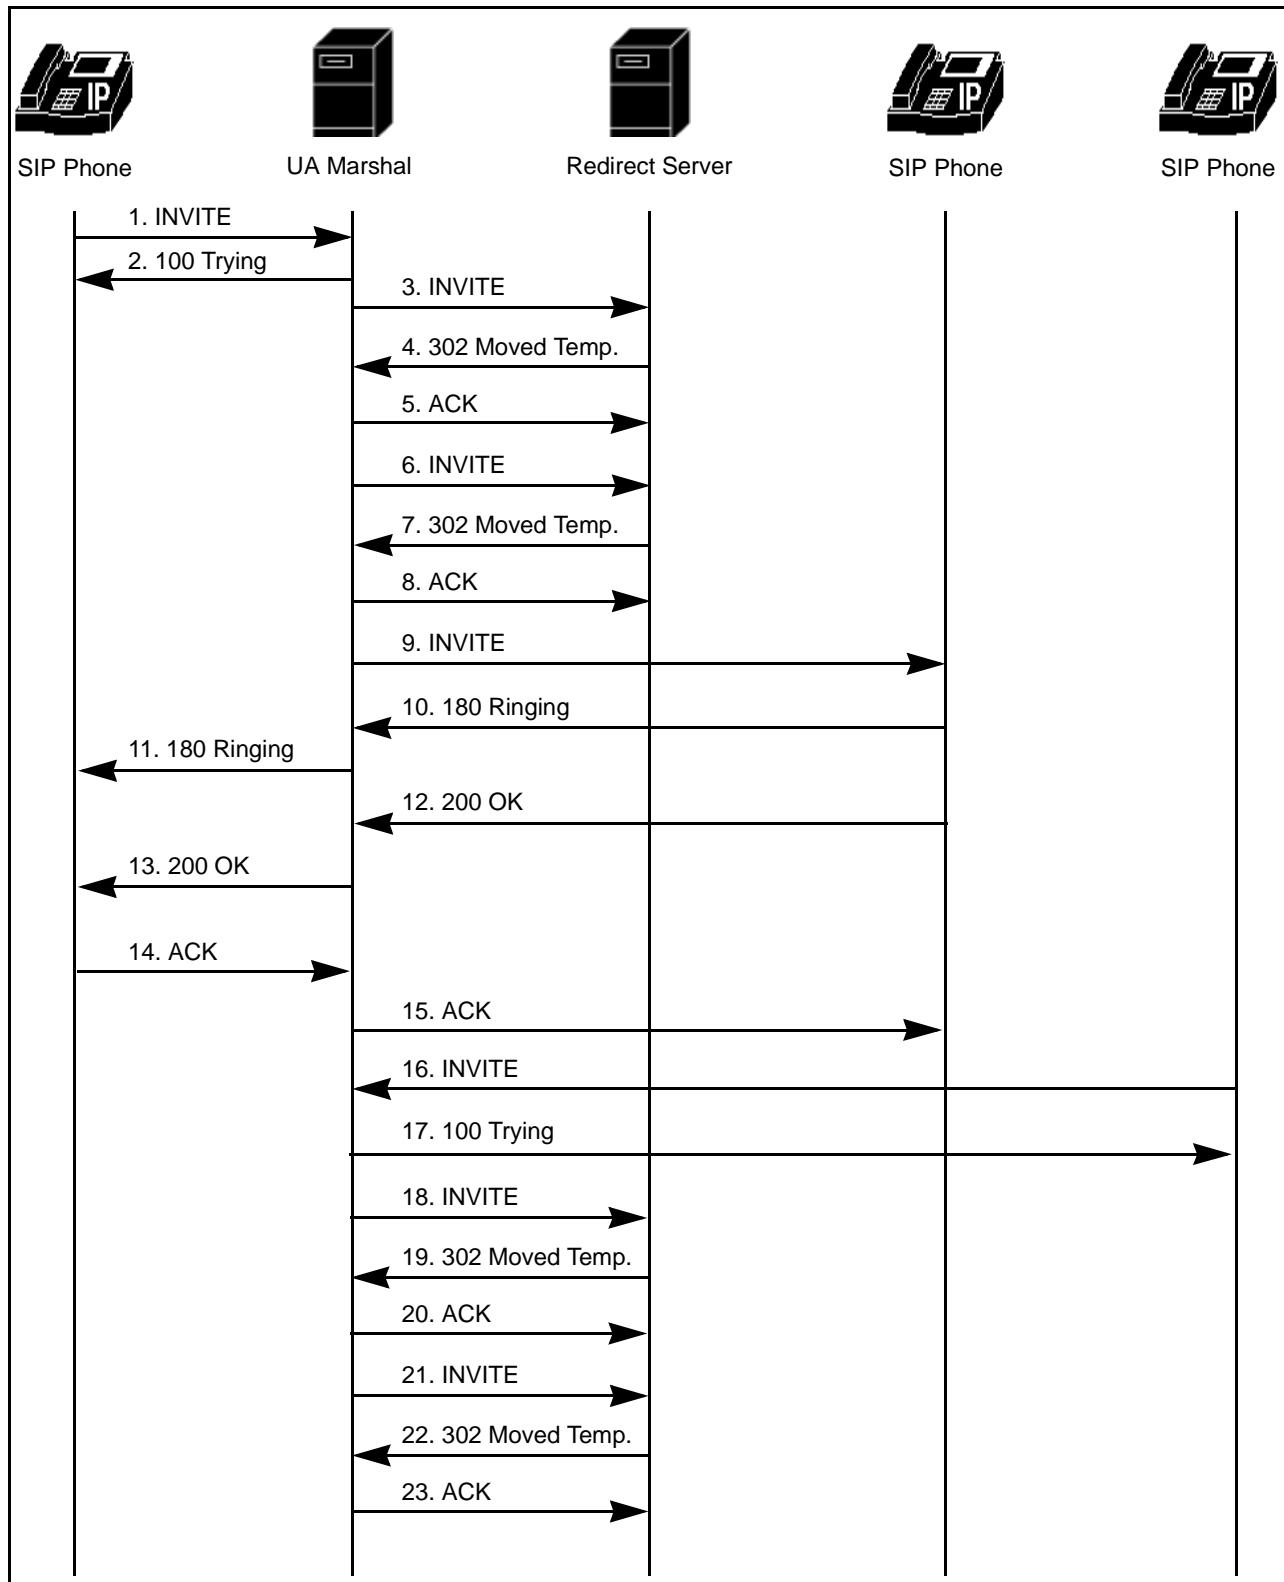

Figure C-21. User Agent to User Agent: Call Waiting — Diagram 1

### User Agent to User Agent: Call Waiting

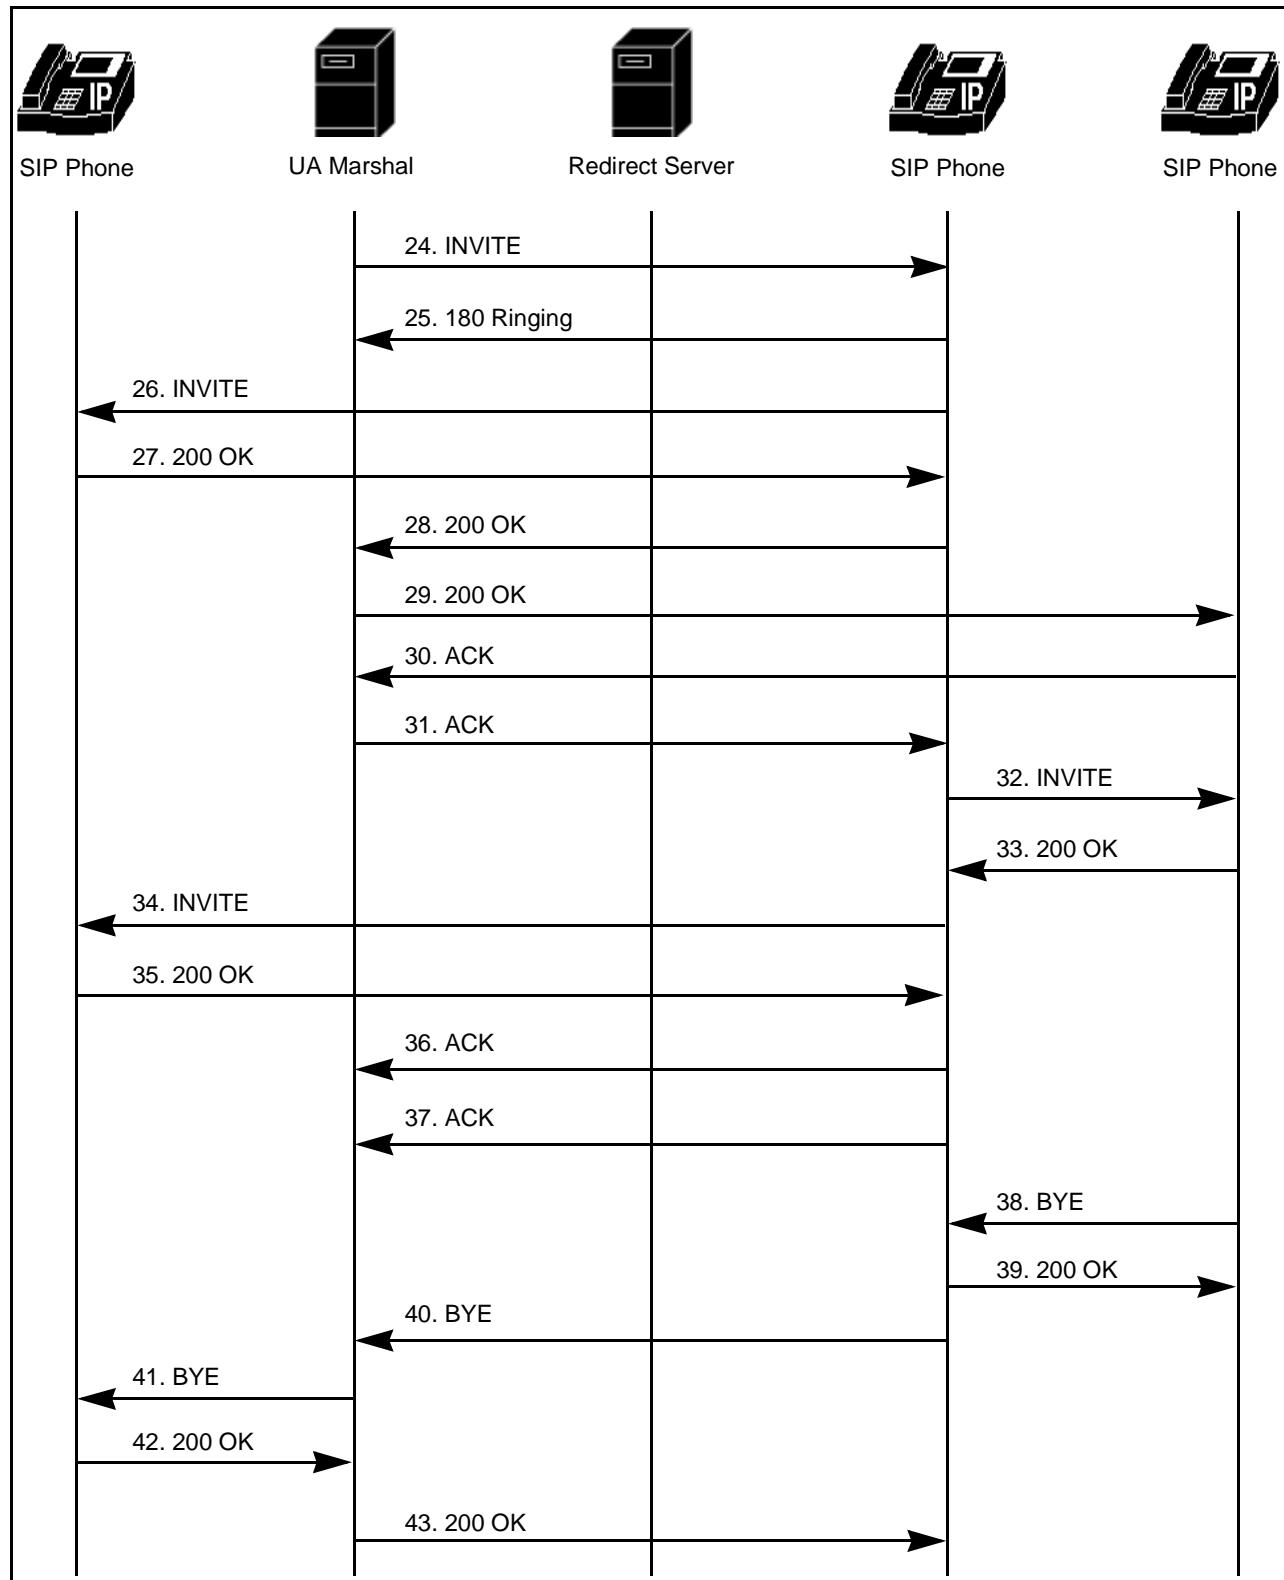

Figure C-22. User Agent to User Agent: Call Waiting — Diagram 2

**Call Trace**

The following call trace shows a third party attempting to connect to a phone that is engaged in conversation with another phone.

```
=====
A calls B

## SIP IP Phone to SIP IP Phone: Forward to Voice Mail

### Call Scenario

Figure C-23 illustrates the following call scenario:

- User A calls User B
- User B does not answer the call
- The call is forwarded to the voice mail feature server

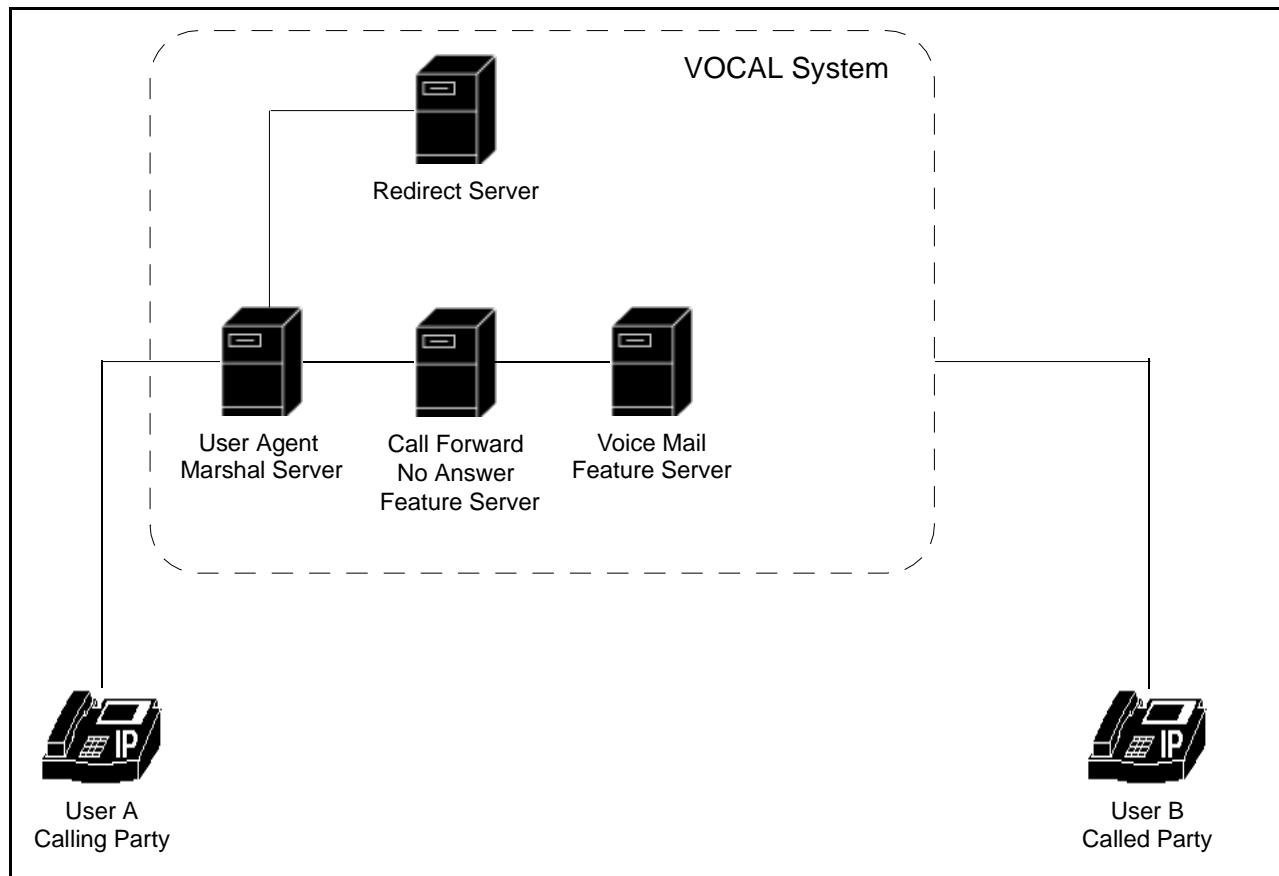

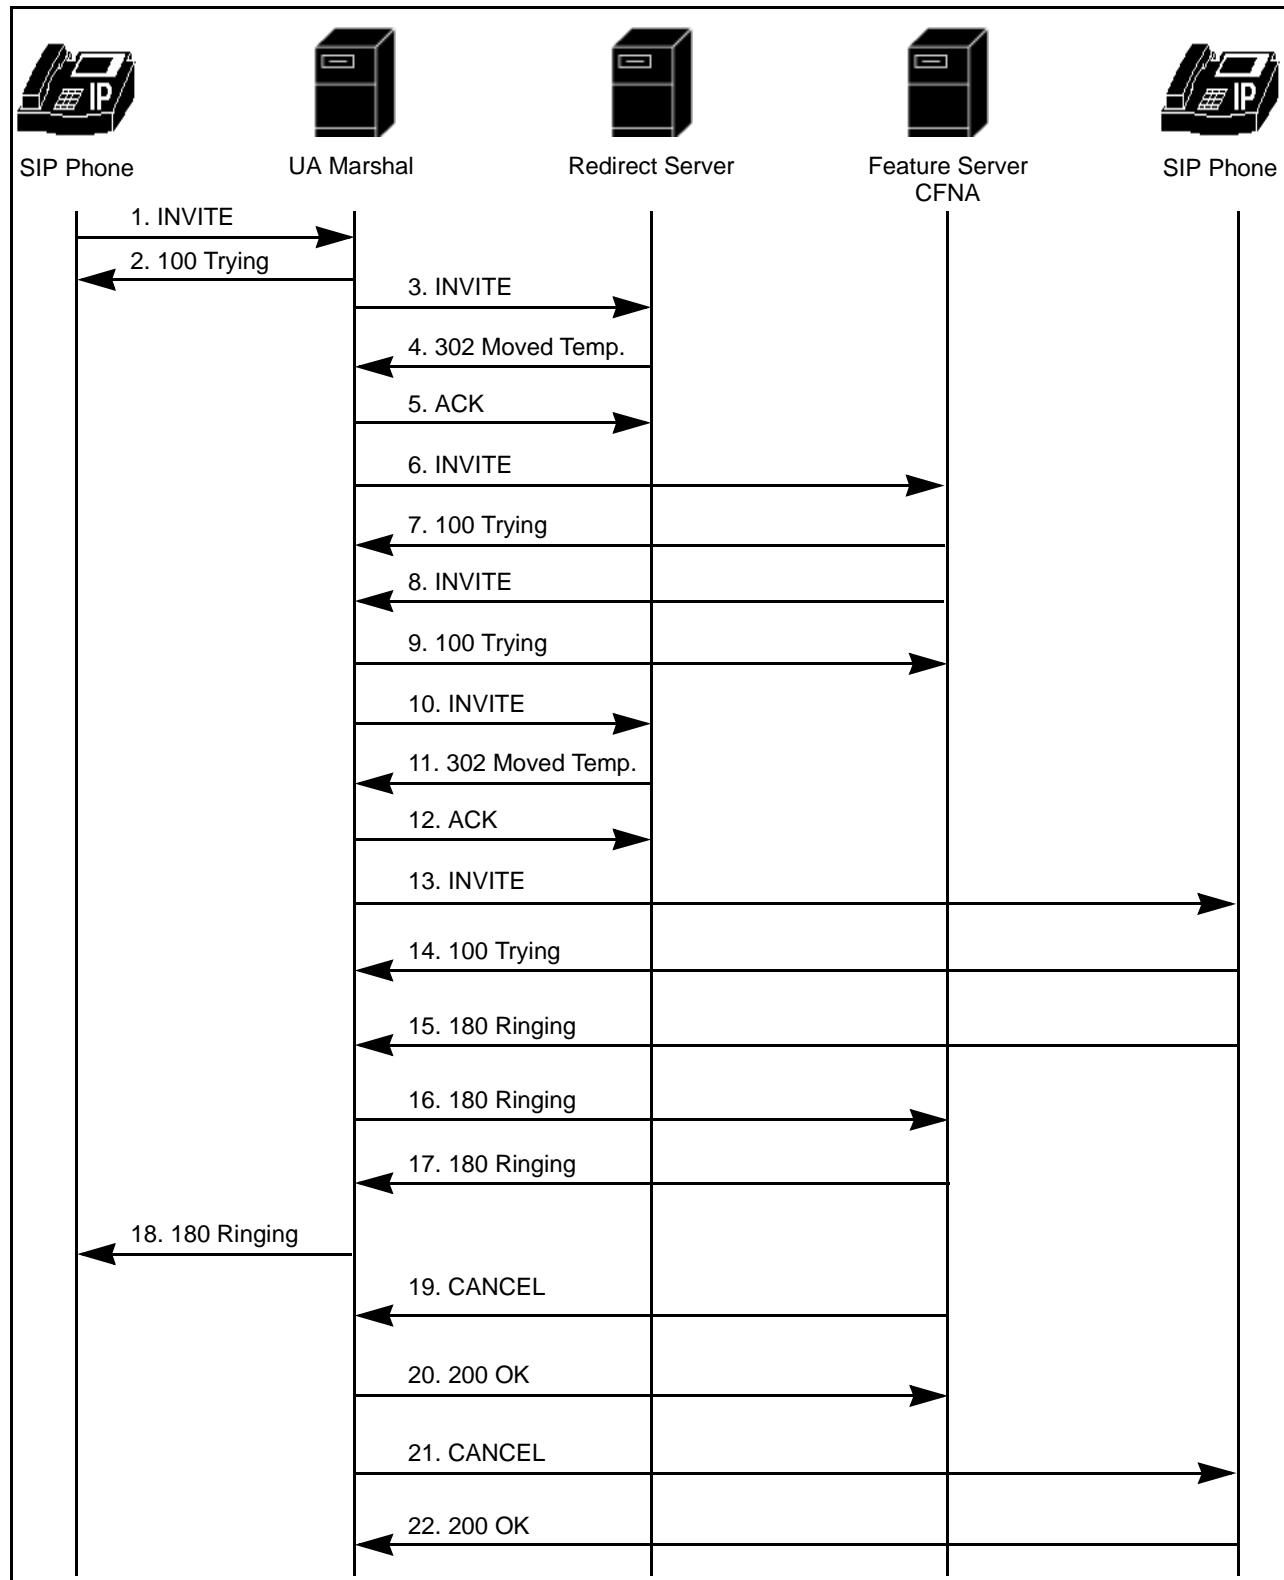

Figure C-23. SIP IP Phone to SIP IP Phone: Forward to Voice Mail

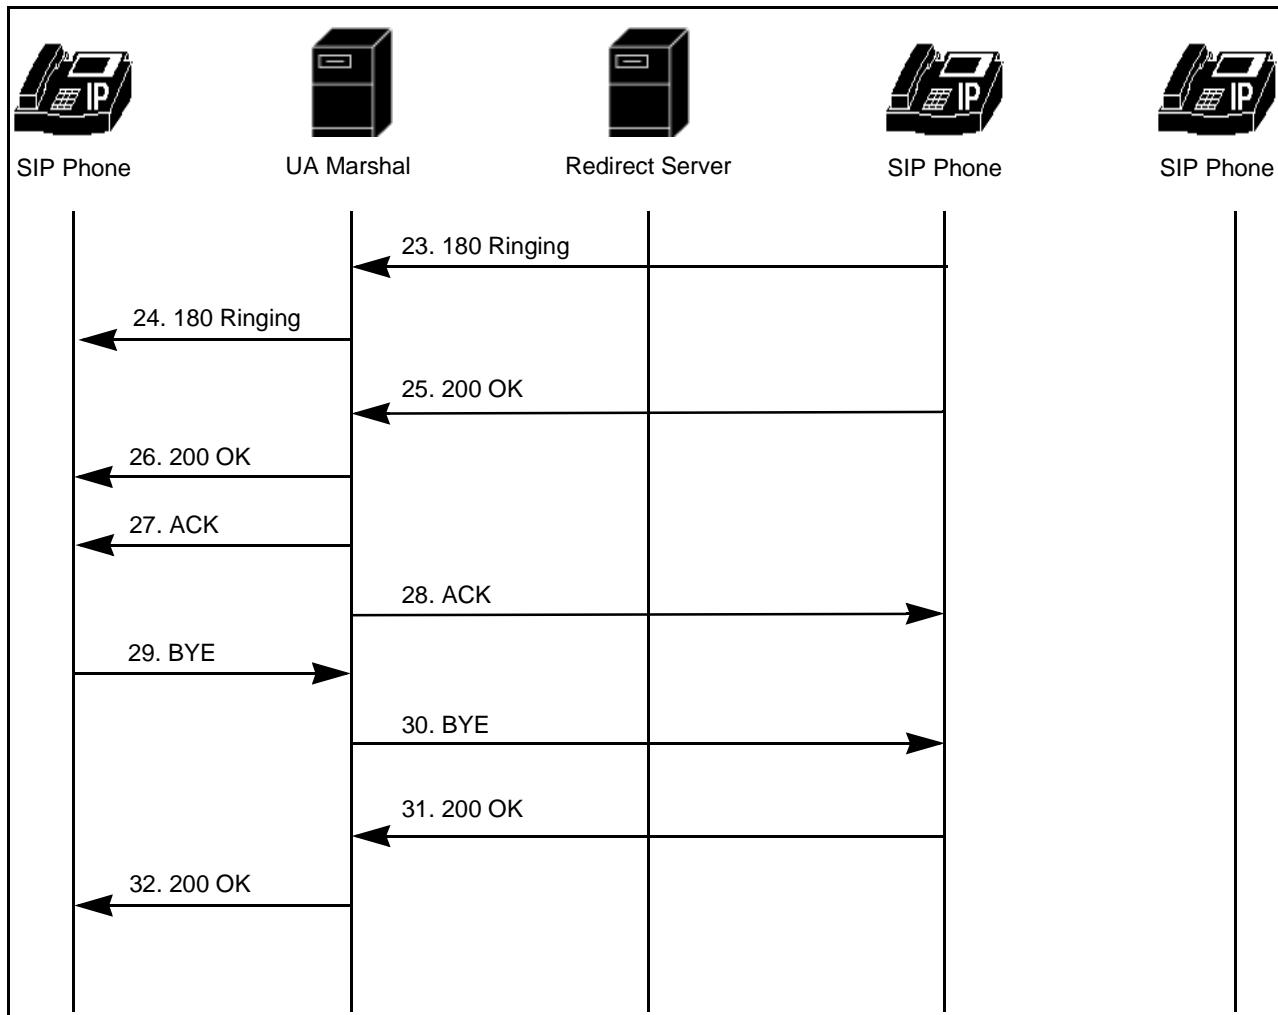

### Call Flow Diagram

Figures C-24 and C-25 show a SIP IP phone attempting to call another on-network SIP IP phone. The second phone is unanswered and the call is re-initiated with the Voice Mail server.

**SIP IP Phone to SIP IP Phone: Forward to Voice Mail**

**Figure C-24. User Agent to User Agent: Call Waiting — Diagram 1**

**Figure C-25. User Agent to User Agent: Call Waiting — Diagram 2**

### Call Trace

The following call trace shows a SIP IP phone attempting to call another on-network SIP IP phone. The second phone is unanswered and the call is re-initiated with the Voice Mail server.

## User Agent to User Agent: Consulted Transfer

### Call Scenario

Figure C-26 illustrates the following call scenario:

- User A calls User B.
- User B puts User B on hold and notifies User C about User A's call.
- User B transfers the call to User C.

**Figure C-26. User Agent to User Agent: Consulted Transfer**

#### ■ Note

To simplify the call flow diagrams, the call flows to the redirect server are not shown.

### Call Flow Diagram

Figures C-27, C-28 and C-29 show a consulted call transfer between two SIP IP phones.

#### ■ Note

This example is taken from VOCAL 1.2.0 and uses the now, deprecated TRANSFER method. VOCAL 1.4.0 supports the REFER method. This call flow will be updated soon.

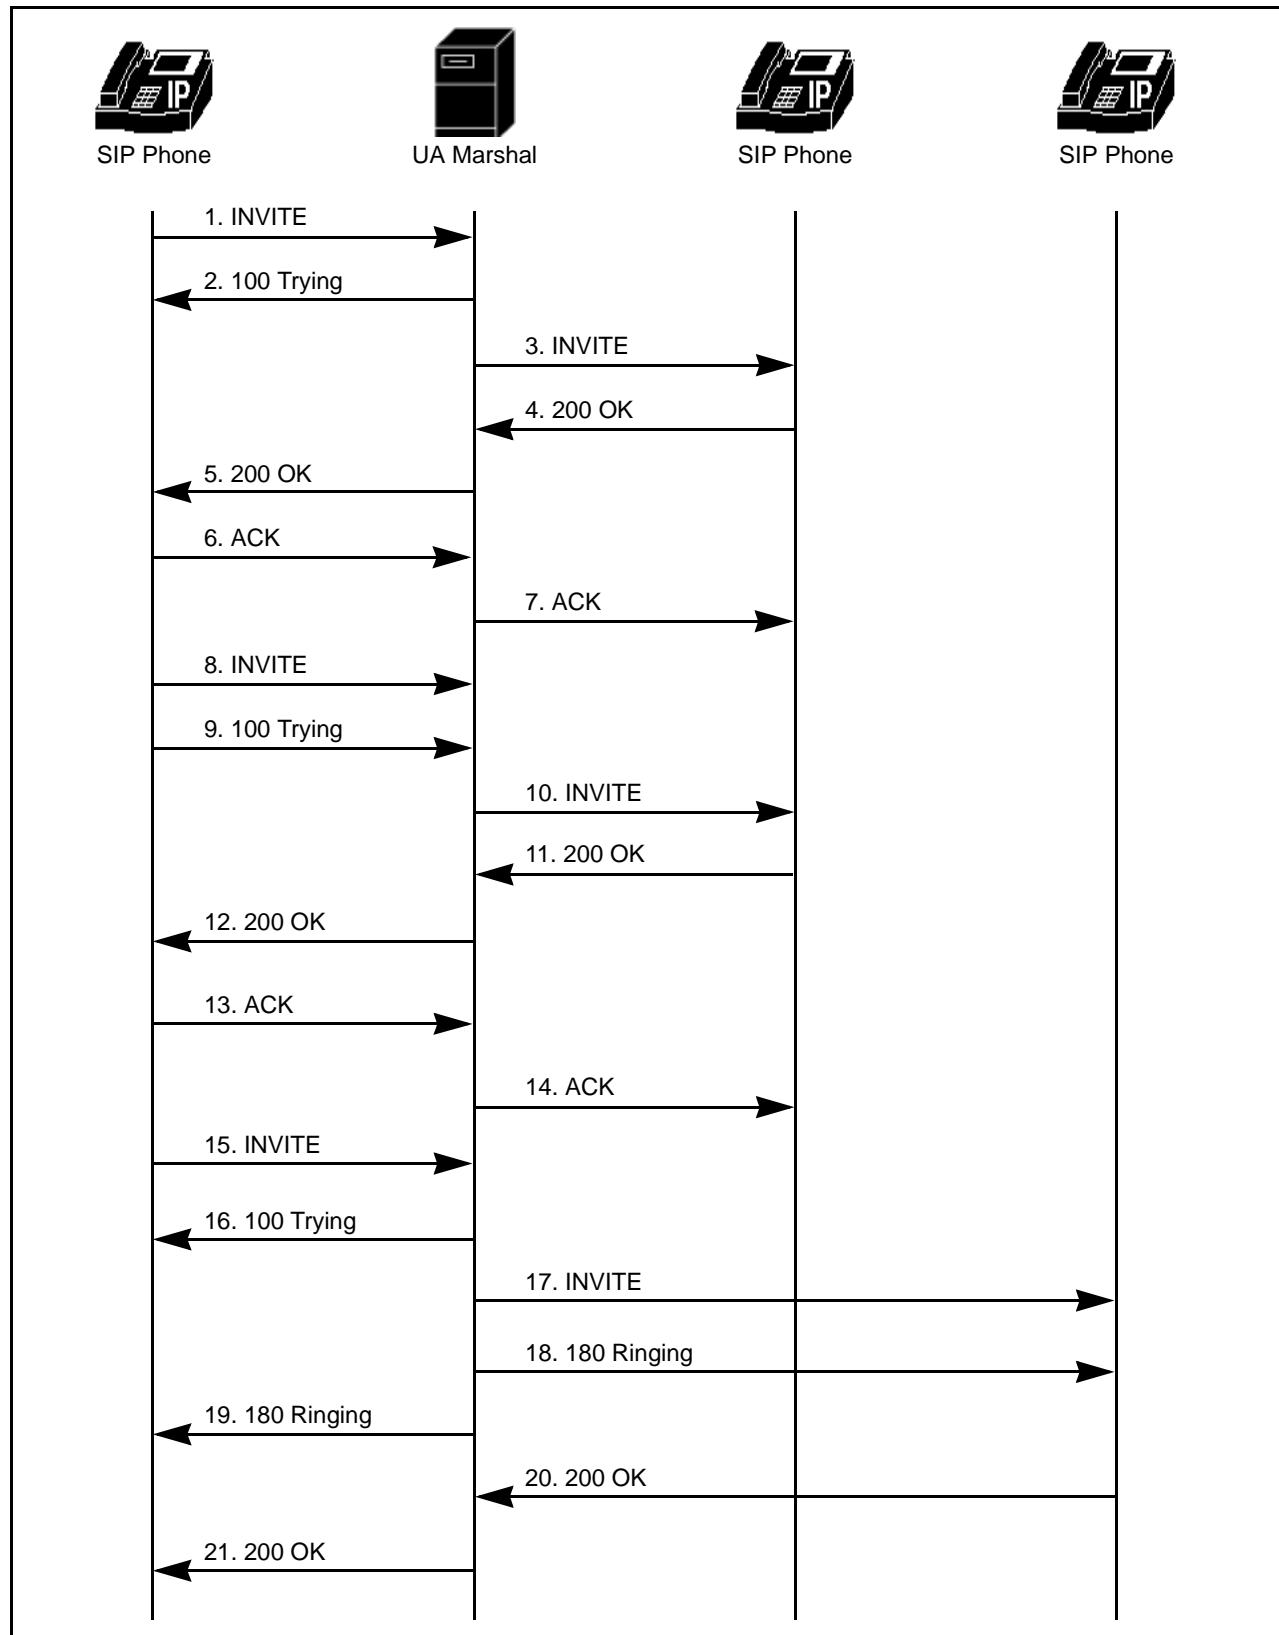

Figure C-27. UA to UA: Consulted Transfer — Diagram 1

### User Agent to User Agent: Consulted Transfer

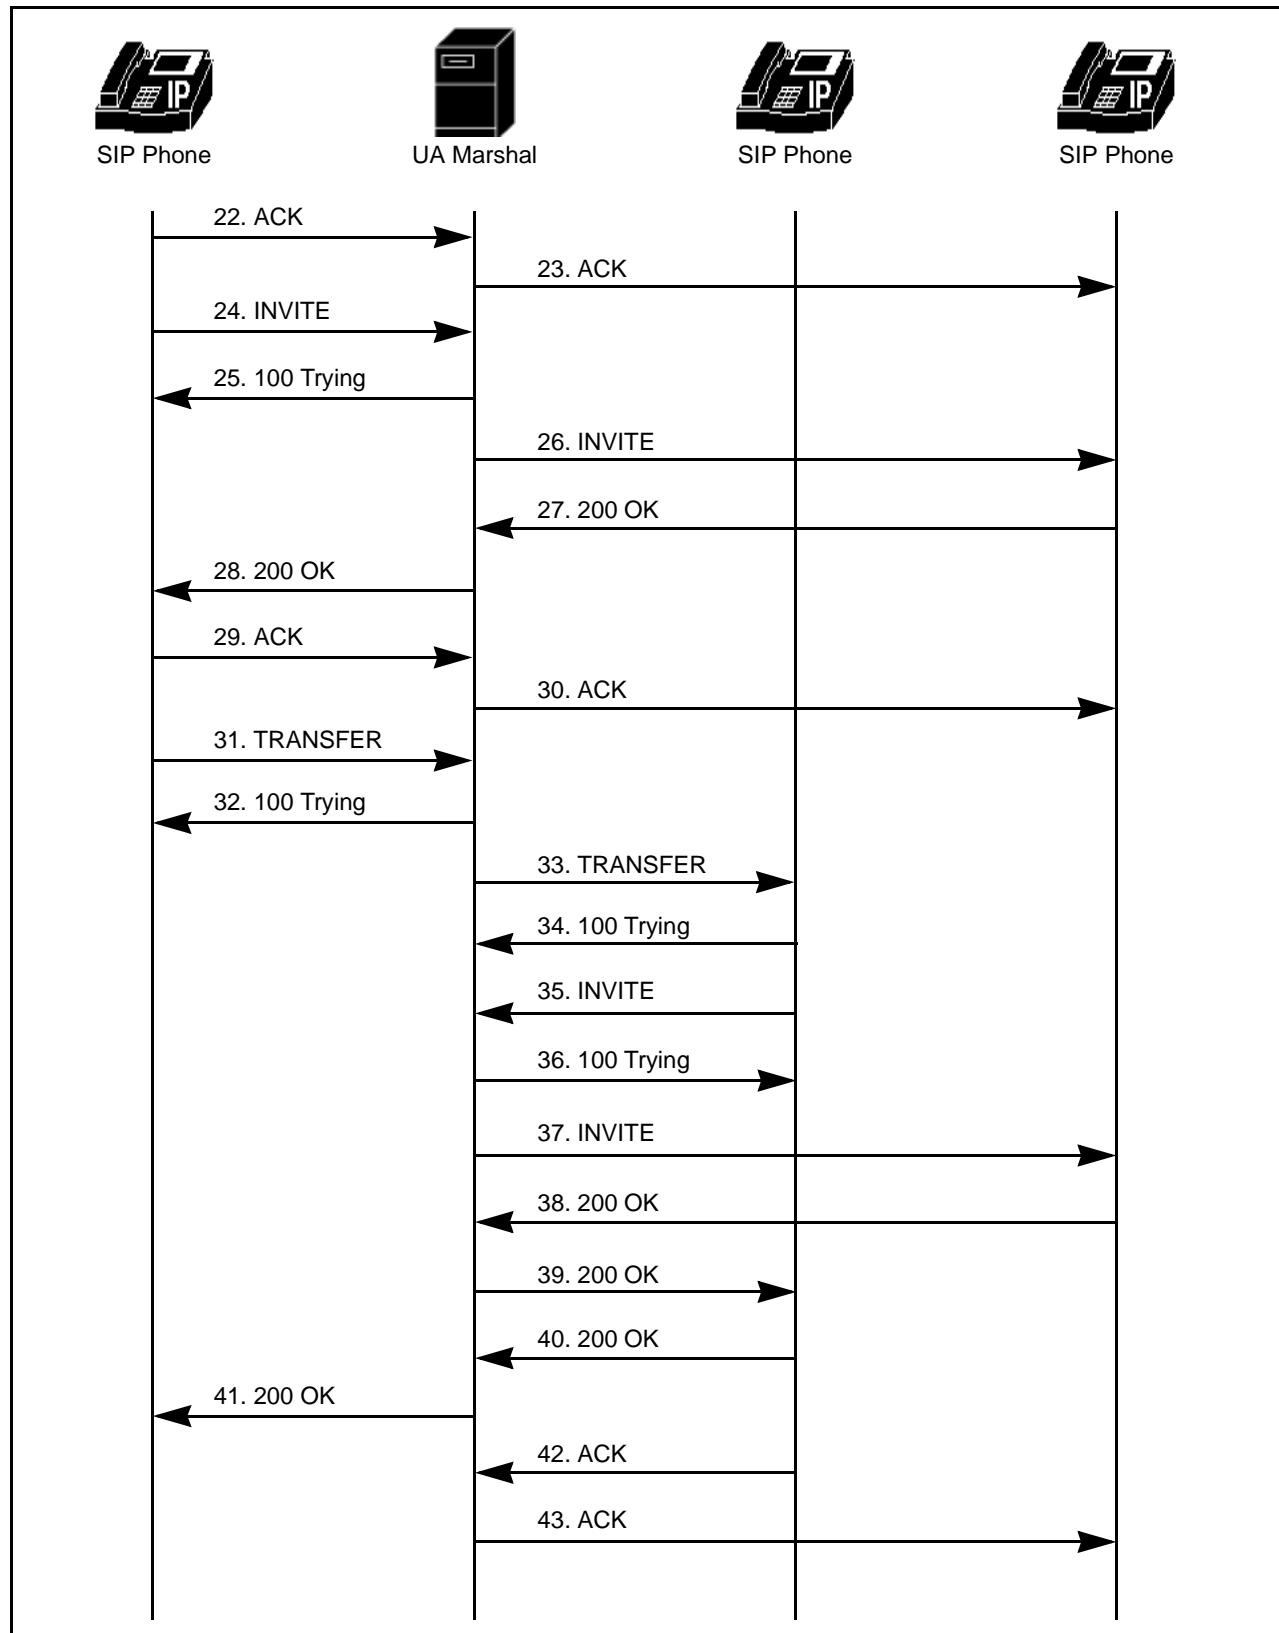

Figure C-28. UA to UA: Consulted Transfer — Diagram 2

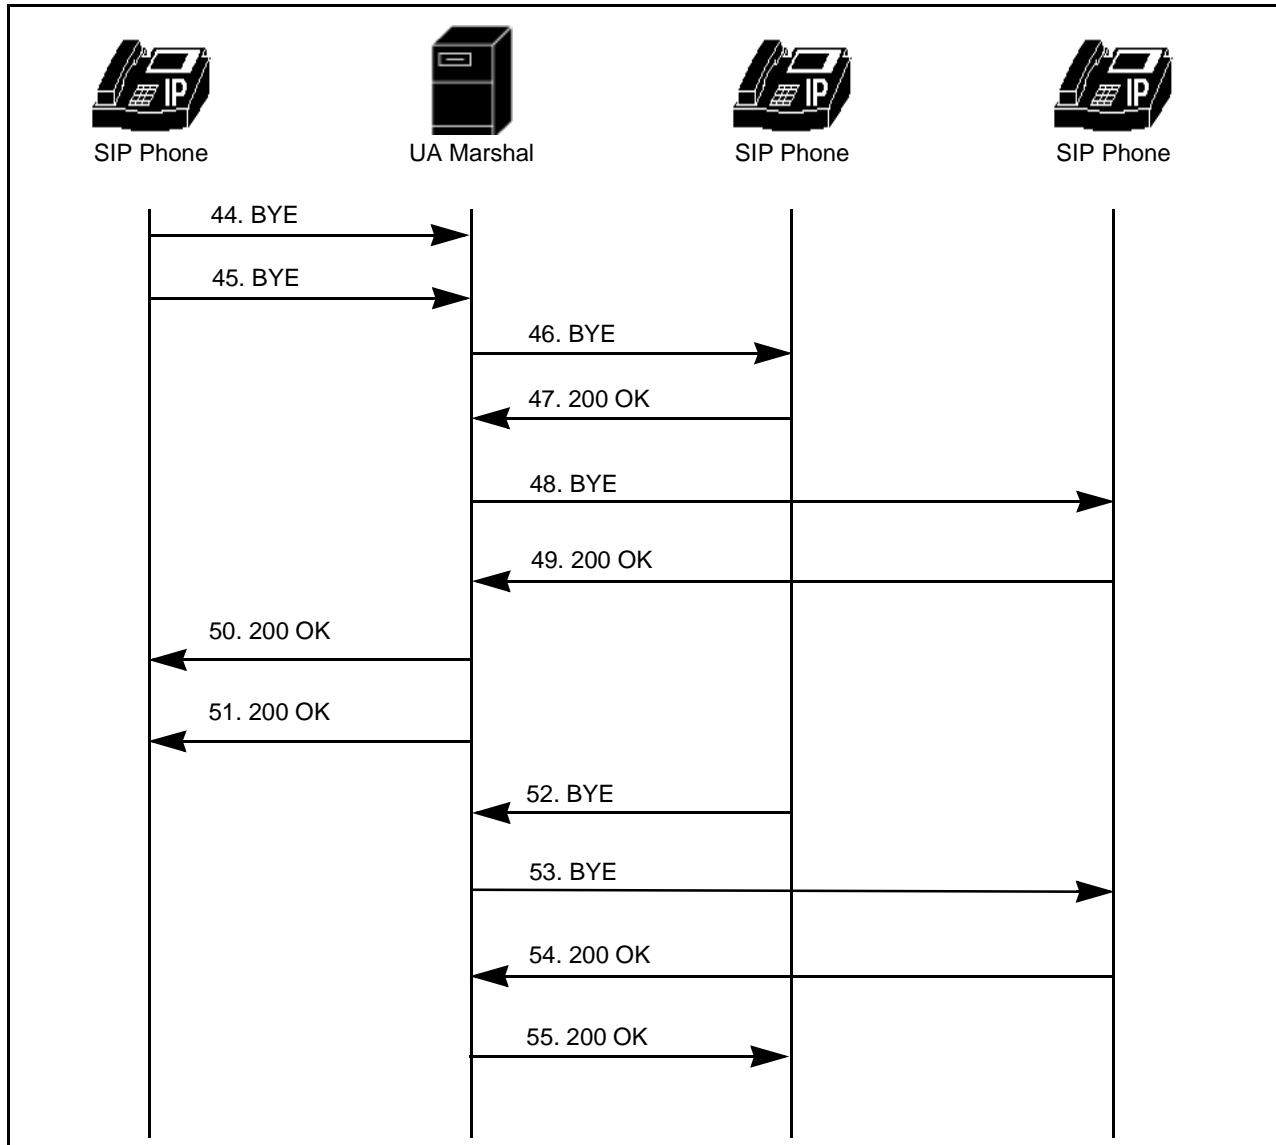

Figure C-29. UA to UA: Consulted Transfer — Diagram 3

#### Call Trace

The following call trace shows a consulted call transfer between two SIP IP phones.

## User Agent to User Agent: Blind Transfer

### Call Scenario

Figure C-30 illustrates a call scenario in which:

- User A calls User B.
- User B transfers the call to User C without consulting User C.

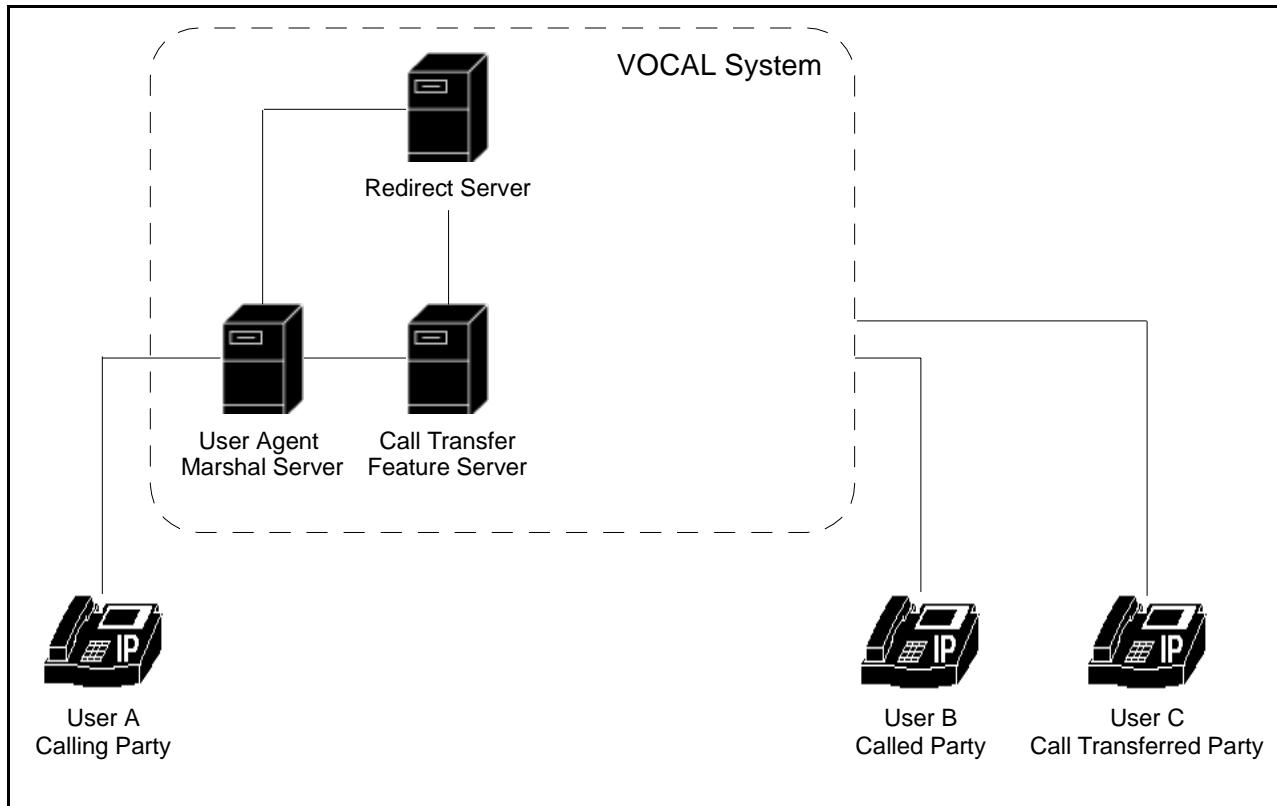

Figure C-30. User Agent to User Agent: Blind Transfer

### Call Flow Diagram

Figures C-31, C-32 and C-33 show an unconsulted call transfer, also known as a “blind” transfer.

#### ■ Note

This example is taken from VOCAL 1.2.0 and uses the now, deprecated TRANSFER method. VOCAL 1.4.0 supports the REFER method. This call flow will be updated soon.

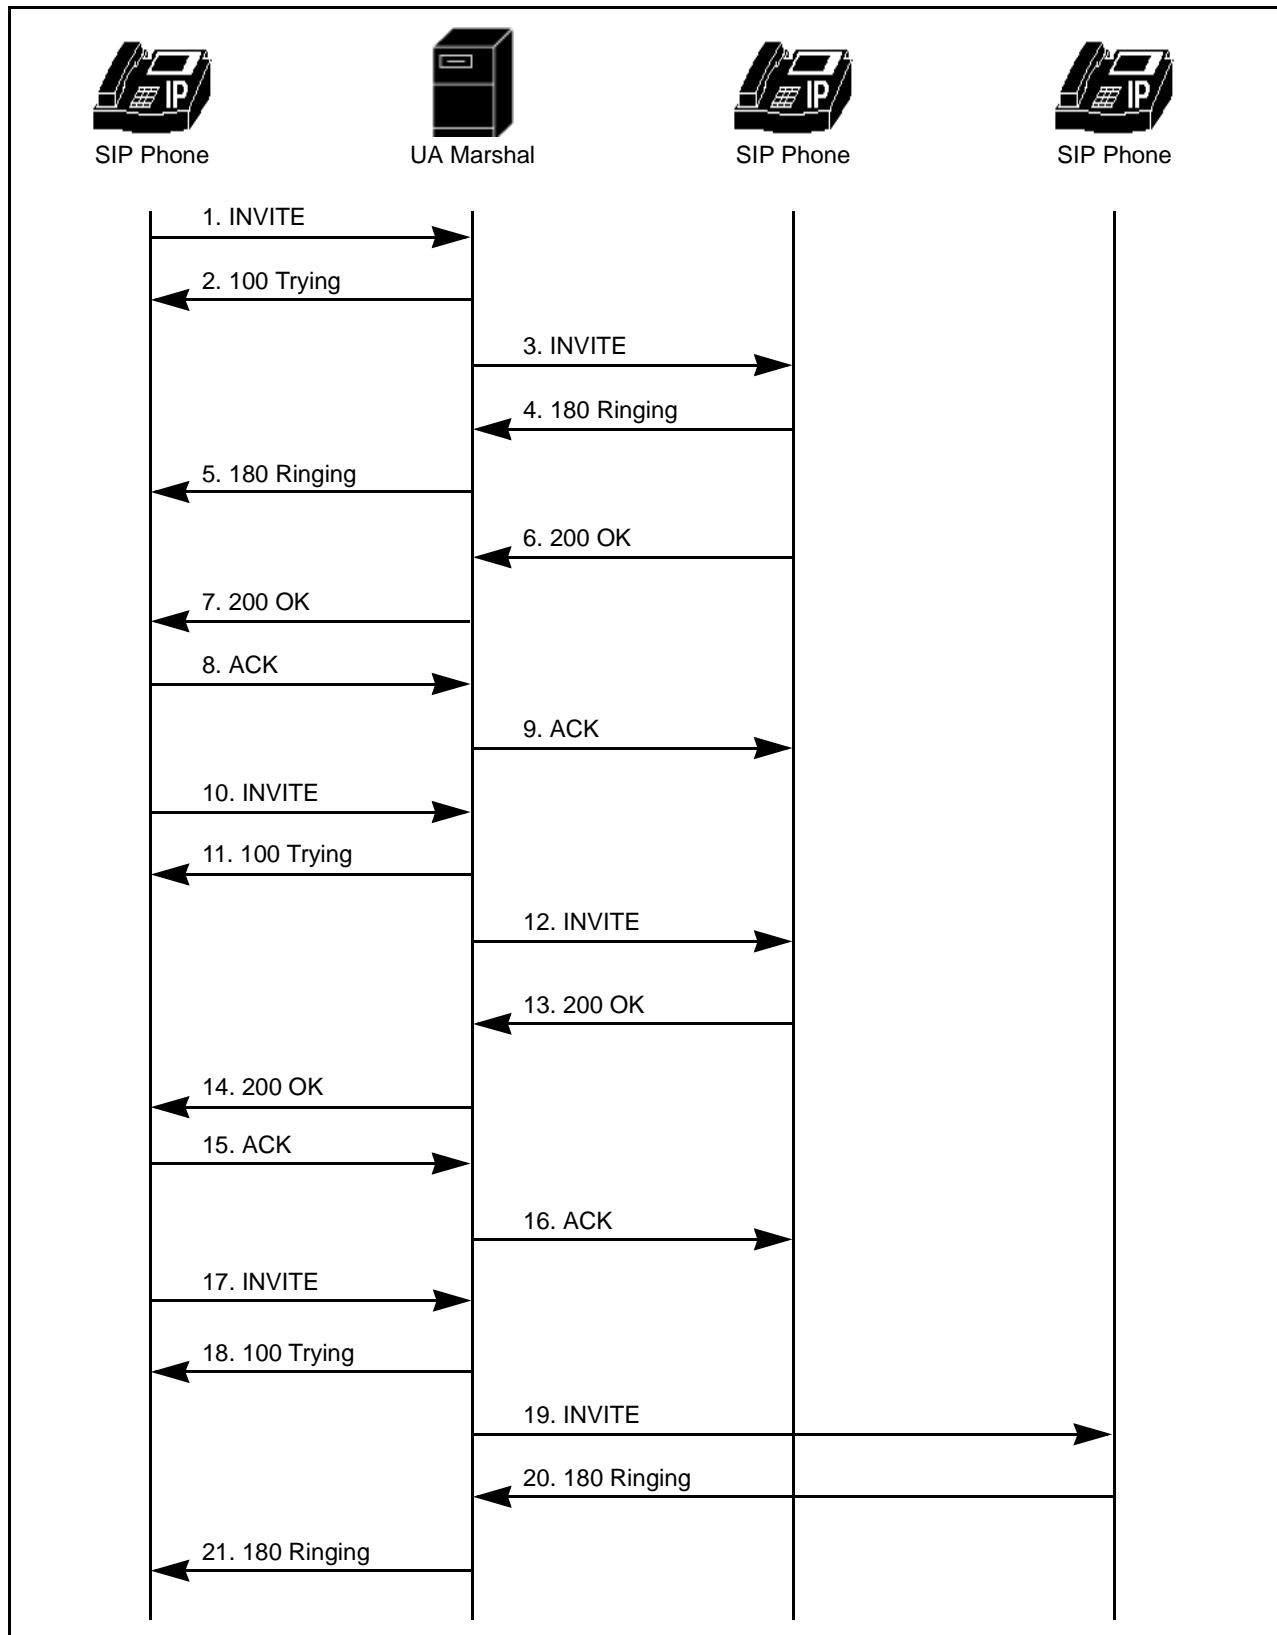

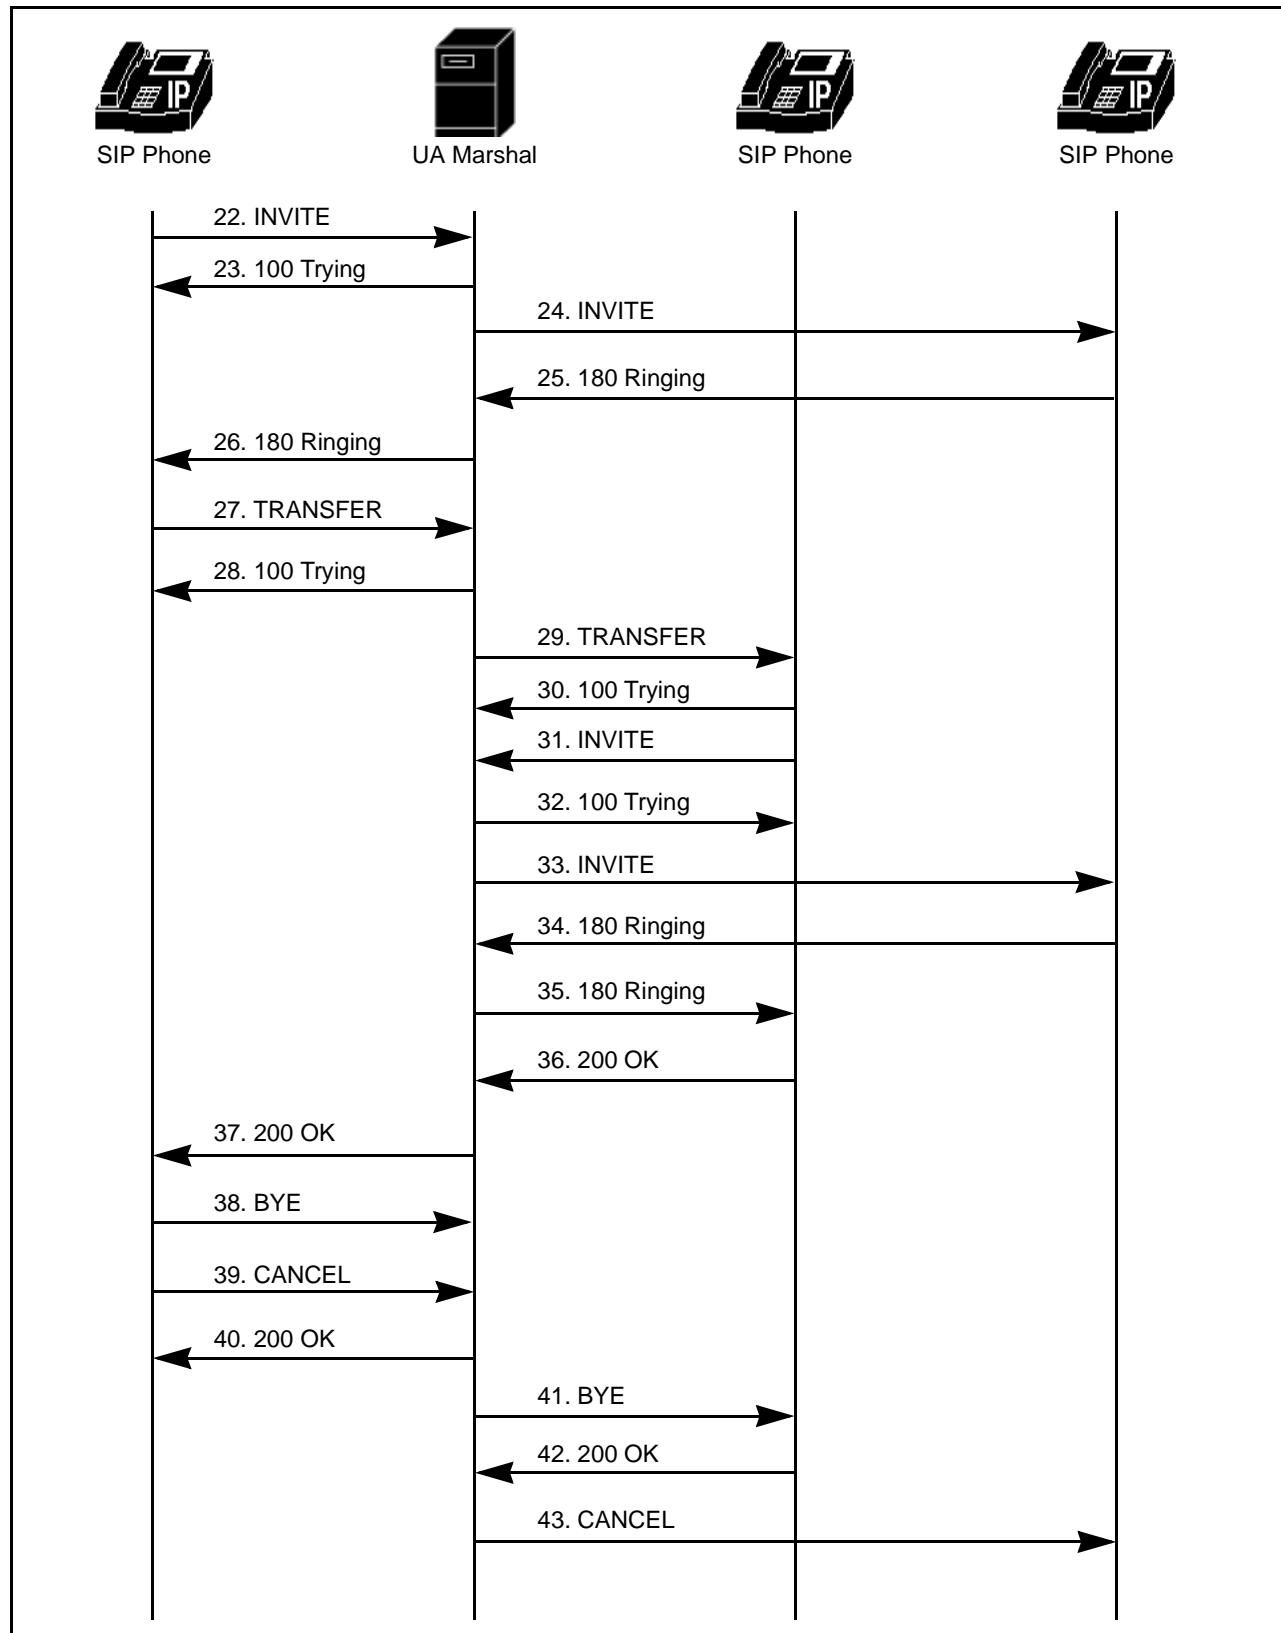

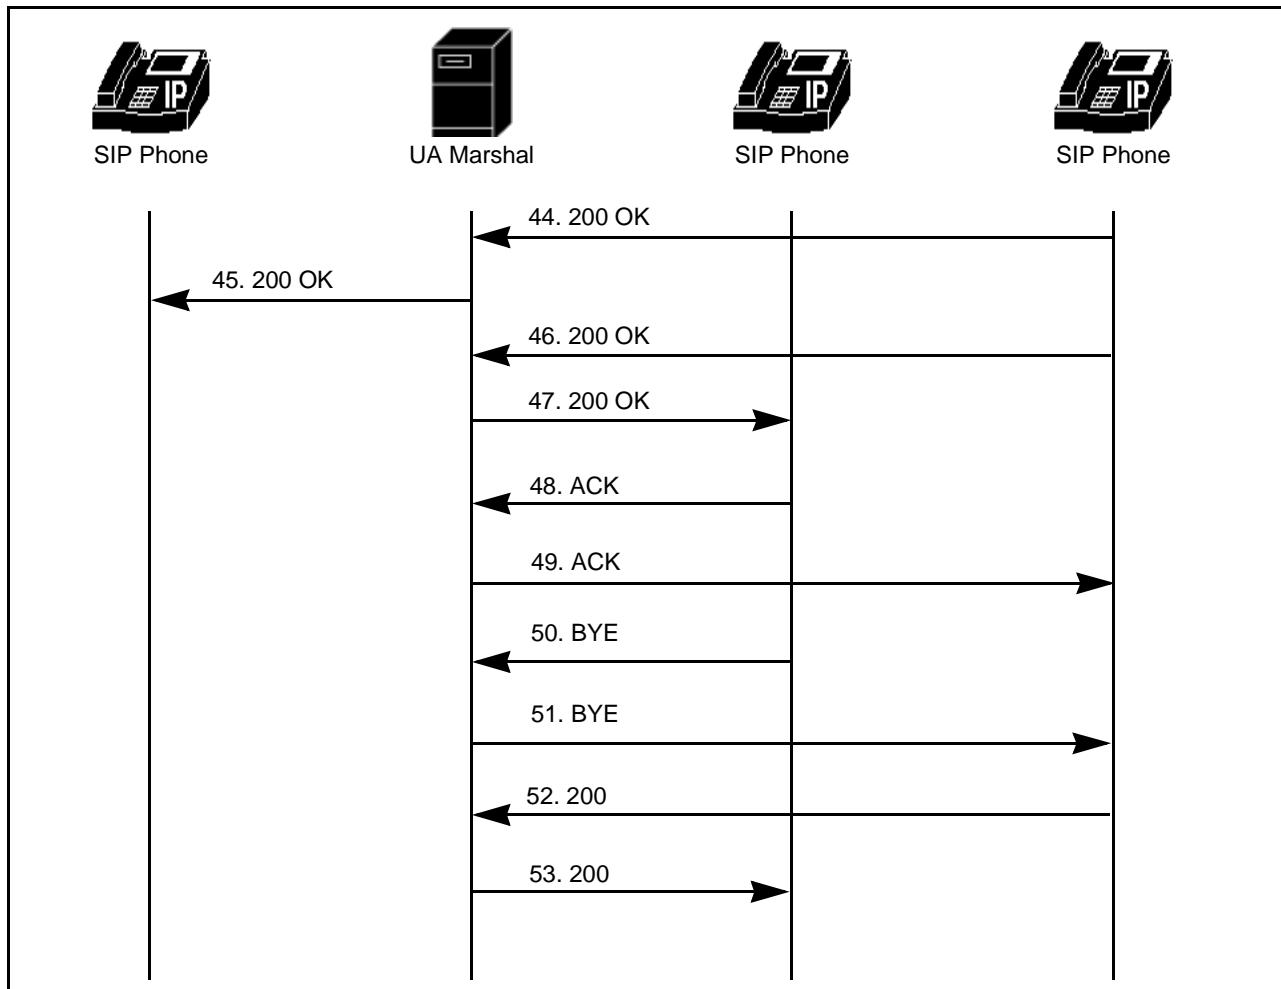

Figure C-31. UA to UA: Blind Transfer — Diagram 1

### User Agent to User Agent: Blind Transfer

**Figure C-32. UA to UA: Blind Transfer — Diagram 2**

**Figure C-33. UA to UA: Blind Transfer — Diagram 3**

### Call Trace

The following call trace shows an unconsulted call transfer.

## JTAPI

### Call Scenario

Figure C-34 illustrates the following call scenario:

- A user uses a JTAPI User Agent on a PC to remotely instruct SIP Phone A to call SIP Phone B.

**Figure C-34. JTAPI**

### Call Flow Diagram

Figures C-35, C-36 and C-37 show third party call control through a JTAPI server.

**■Note**

The JTAPI server has been deprecated in VOCAL version 1.4.0 in favor of the Back-to-Back User Agent, which is available separately on Vovida.org. This call flow shows how the JTAPI server worked with older versions of VOCAL.

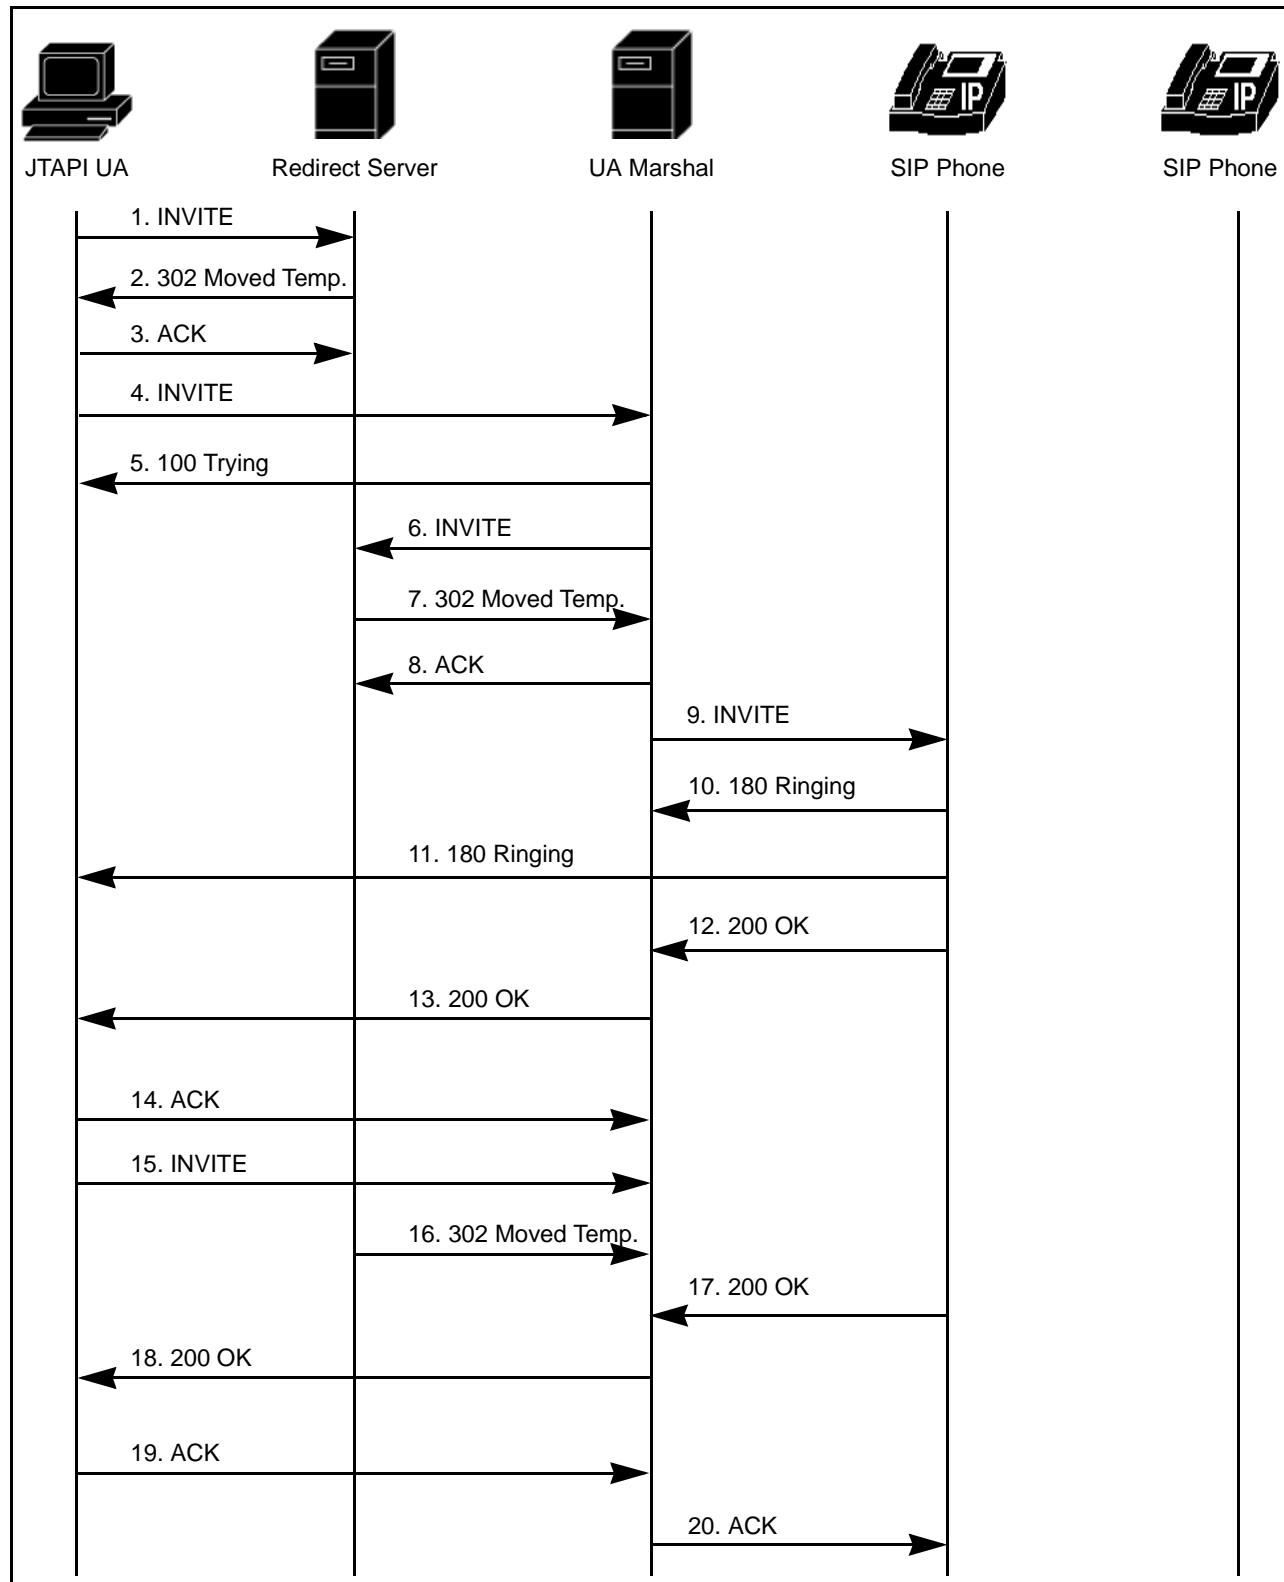

Figure C-35. User Agent to User Agent: Call Waiting — Diagram 1

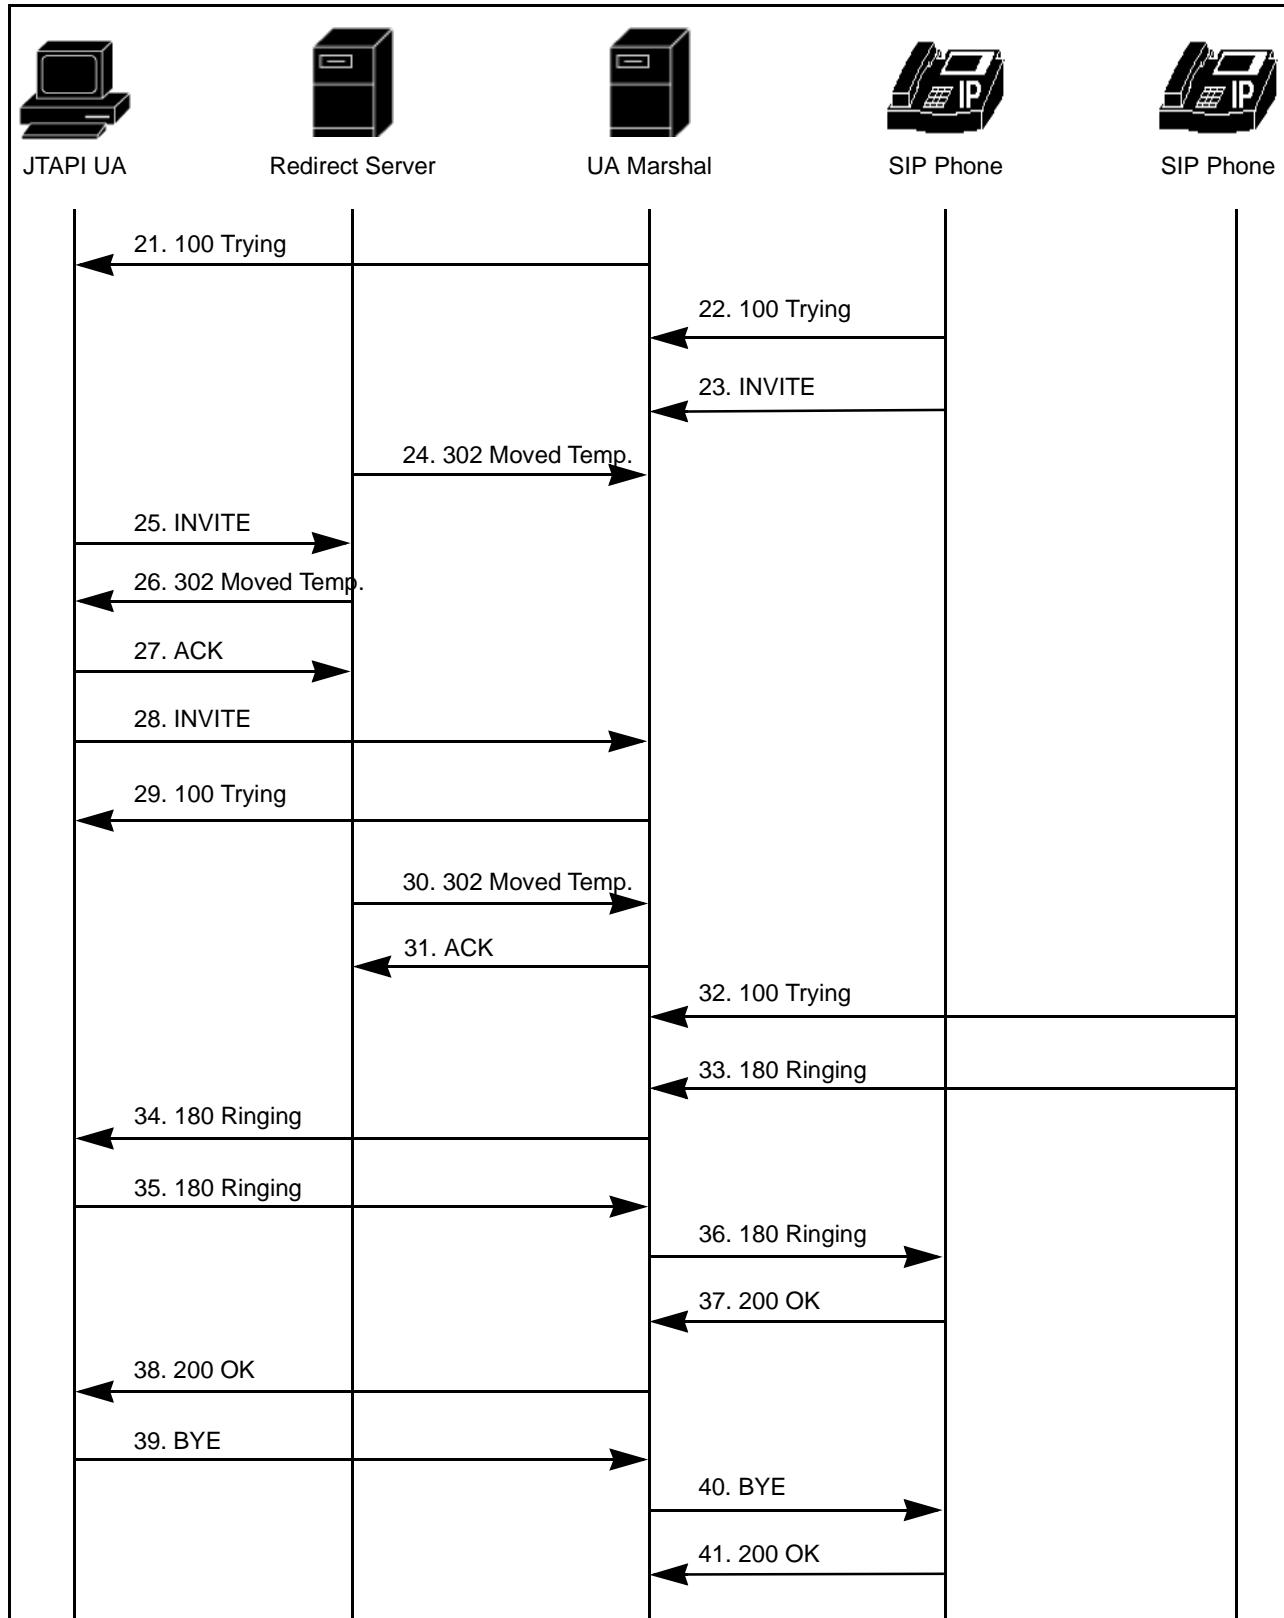

Figure C-36. User Agent to User Agent: Call Waiting — Diagram 2

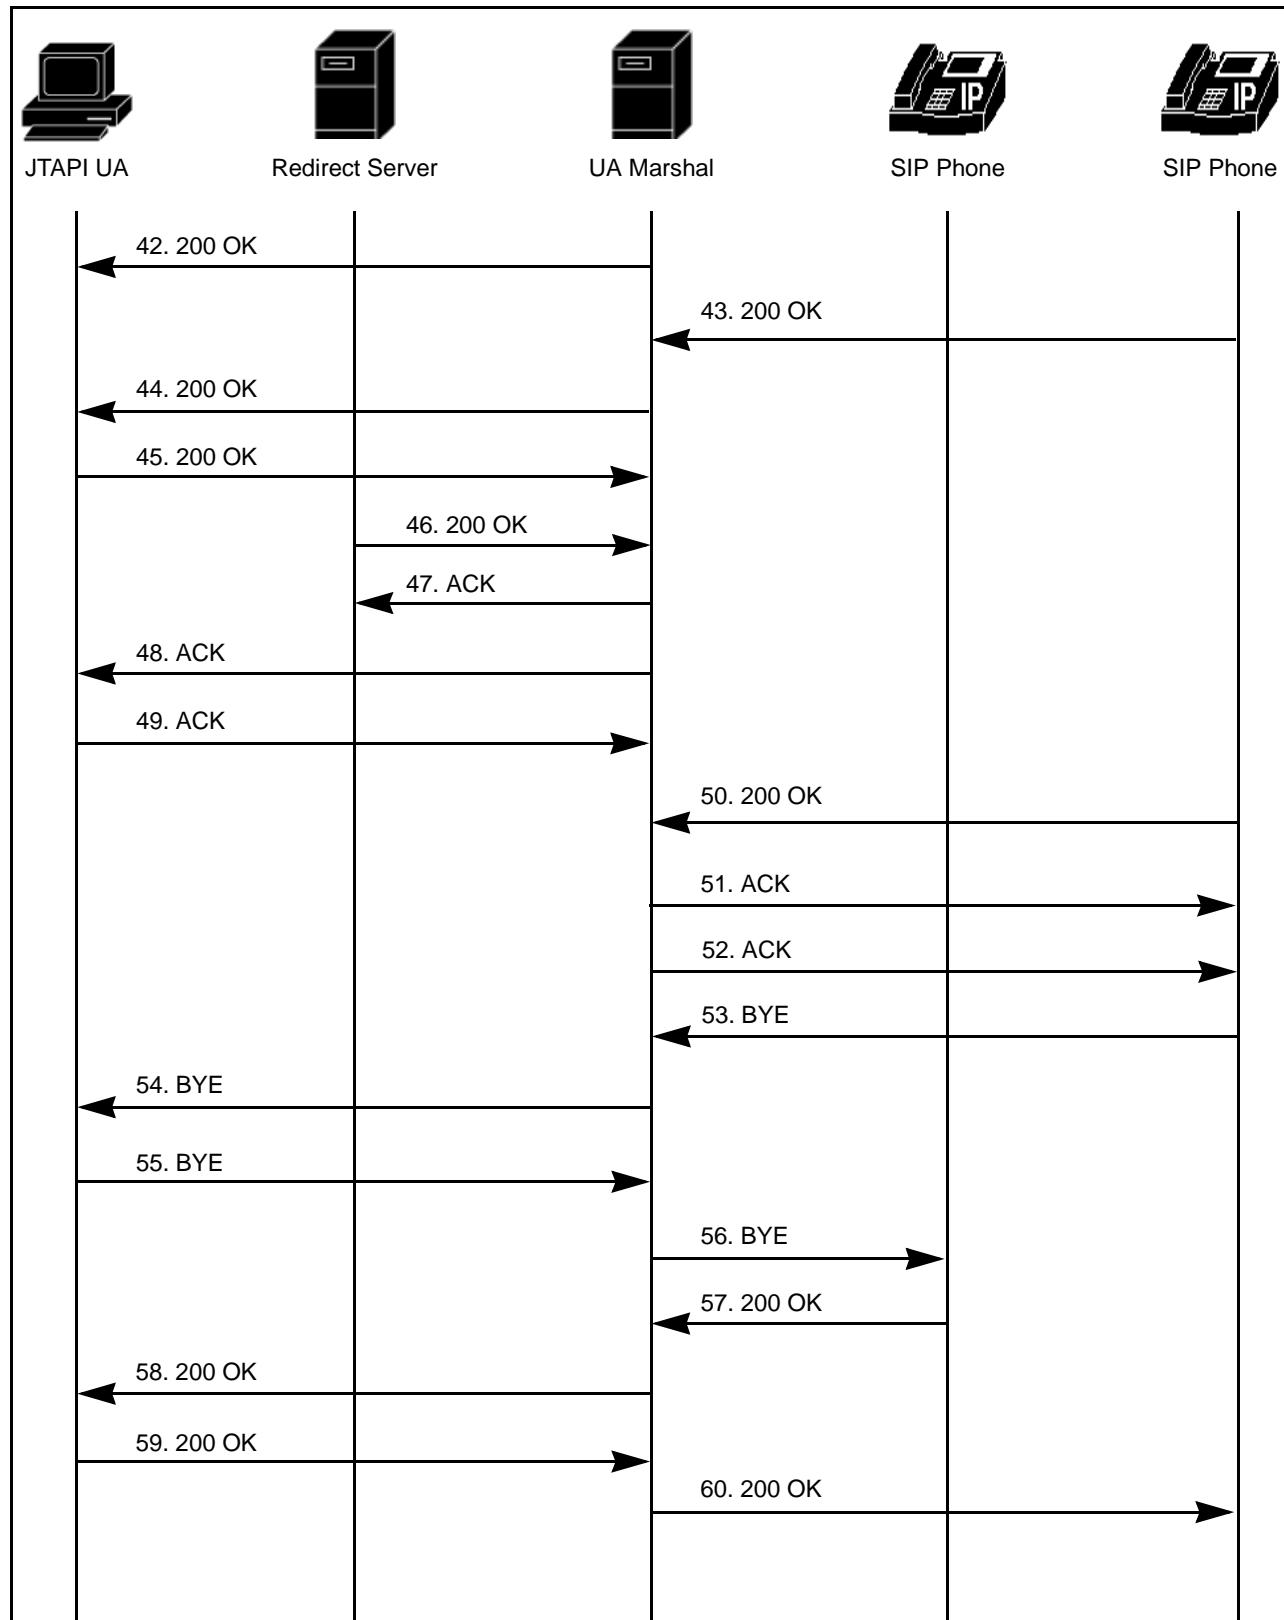

Figure C-37. User Agent to User Agent: Call Waiting — Diagram 3

**Call Trace**

The following call trace shows third party call control through a JTAPI server.

```

## **Ad Hoc Conference Call Between User Agents**

### **Call Scenario**

Figure C-38 illustrates the following call scenario:

- User A calls User B
- User A brings User C into the conversation via ad hoc conferencing.

**Figure C-38. User Agent to User Agent to User Agent: Ad Hoc Conference Call: Disconnect Last Party**

#### **■Note**

To simplify the call flow diagrams, the call flows to the redirect server are not shown.

### **Call Flow Diagram**

Figures C-39, C-40, C-41 and C-42 show an ad hoc conference call between three users.

### Ad Hoc Conference Call Between User Agents

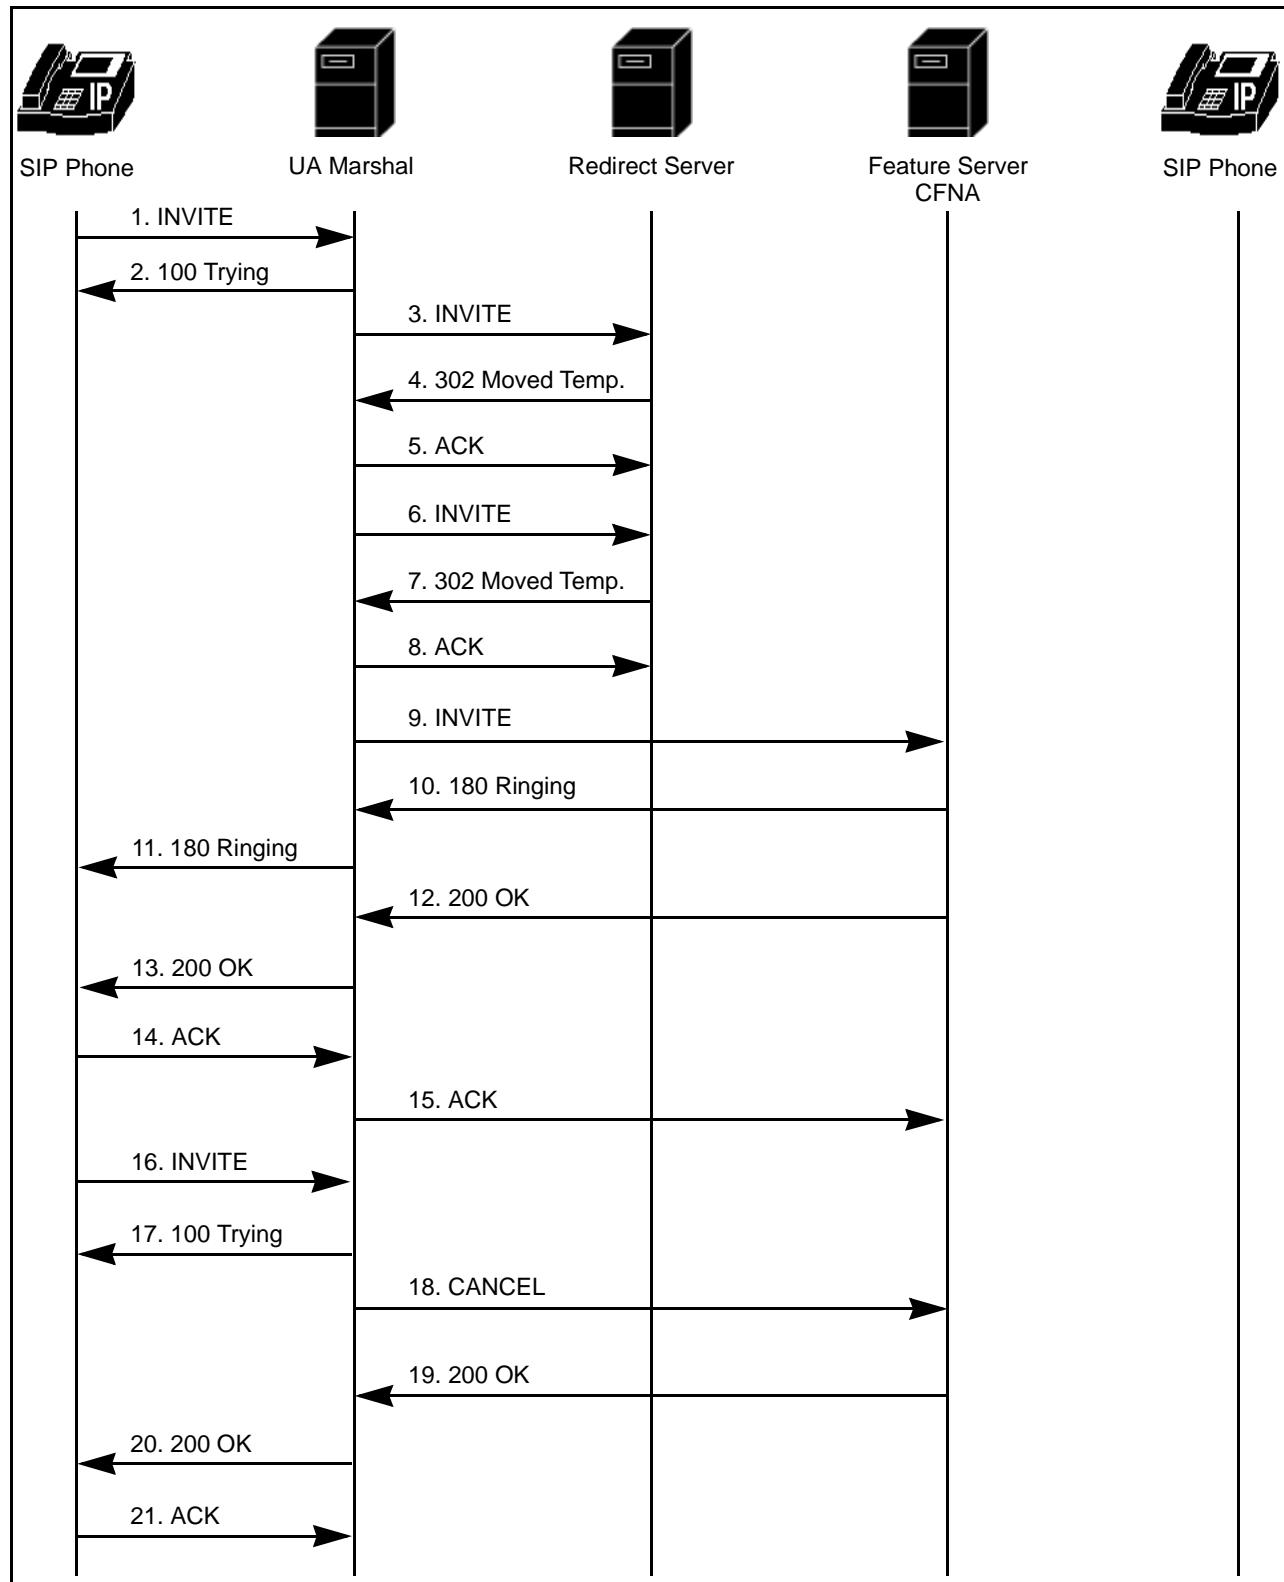

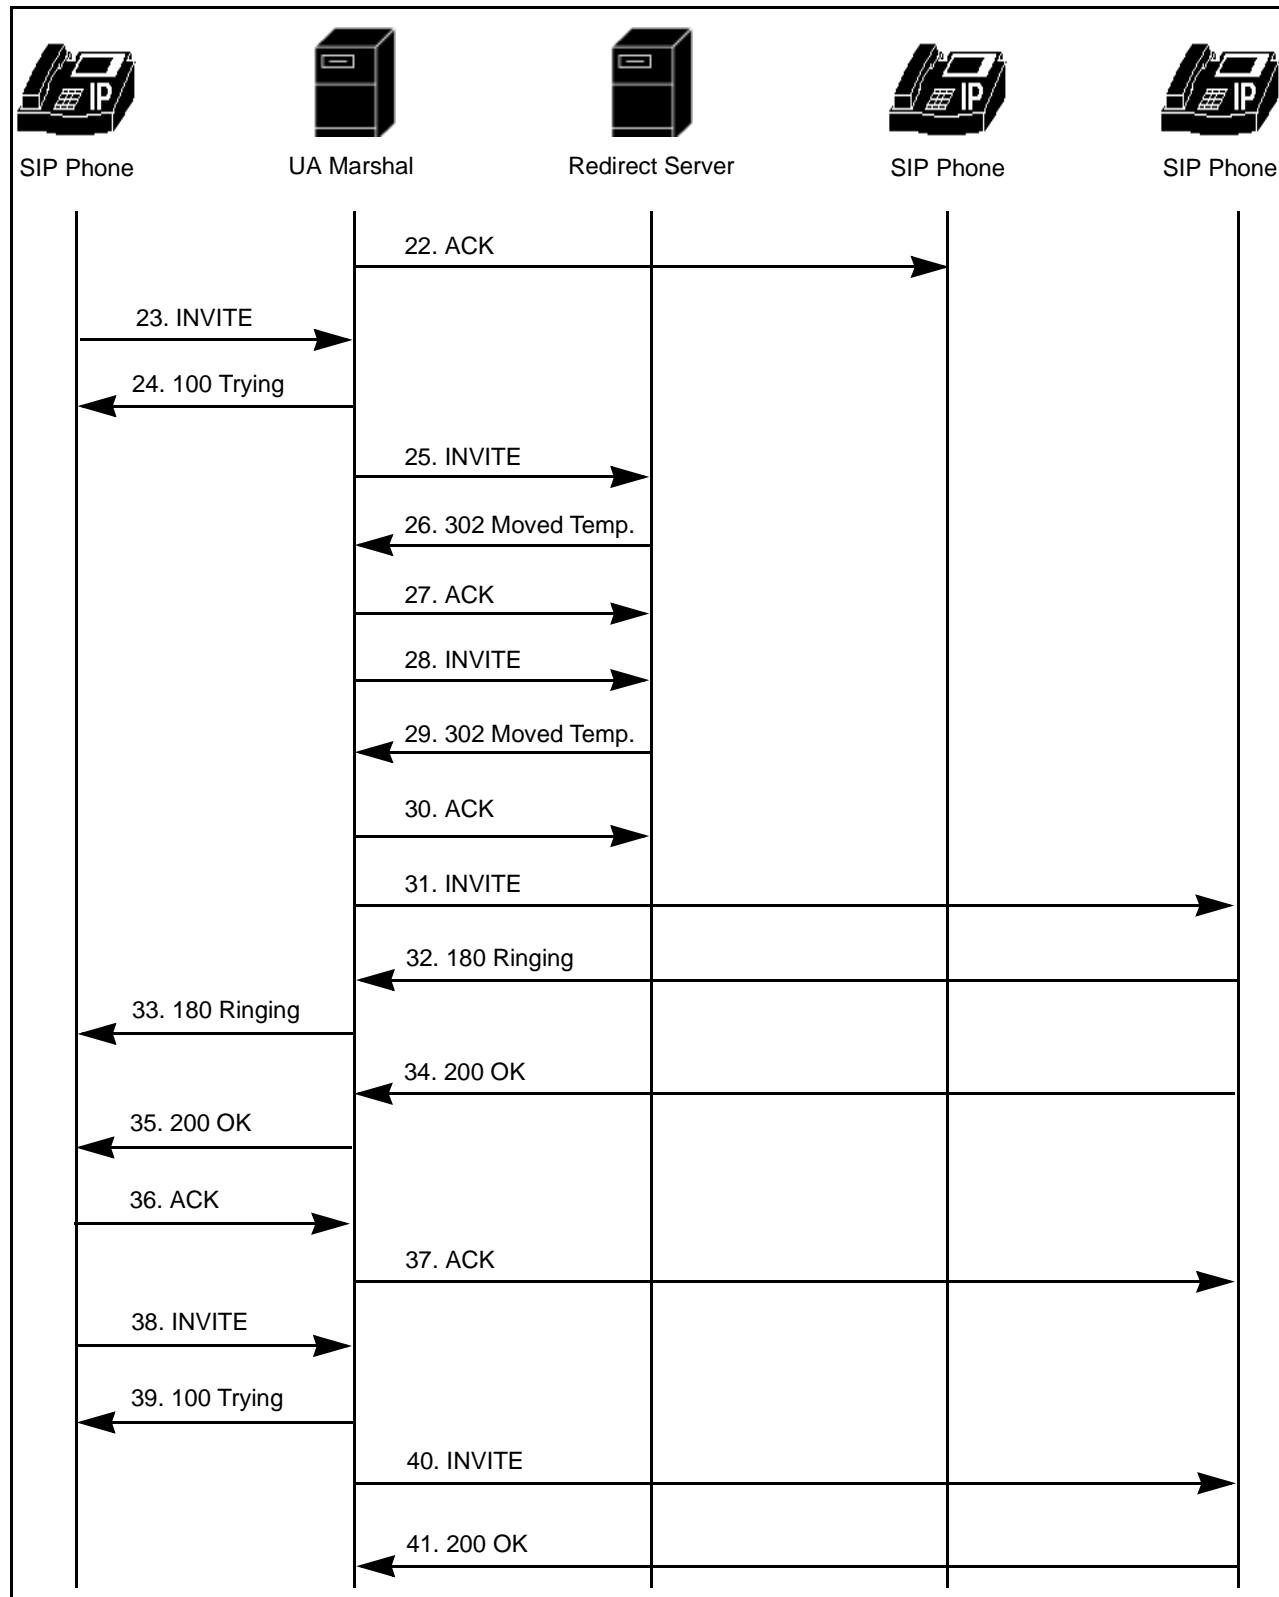

Figure C-39. User Agent to User Agent to User Agent: Ad Hoc Conference Call: Disconnect Last Party — Diagram 1

*Figure C-40. User Agent to User Agent to User Agent: Ad Hoc Conference Call: Disconnect Last Party — Diagram 2*

### Ad Hoc Conference Call Between User Agents

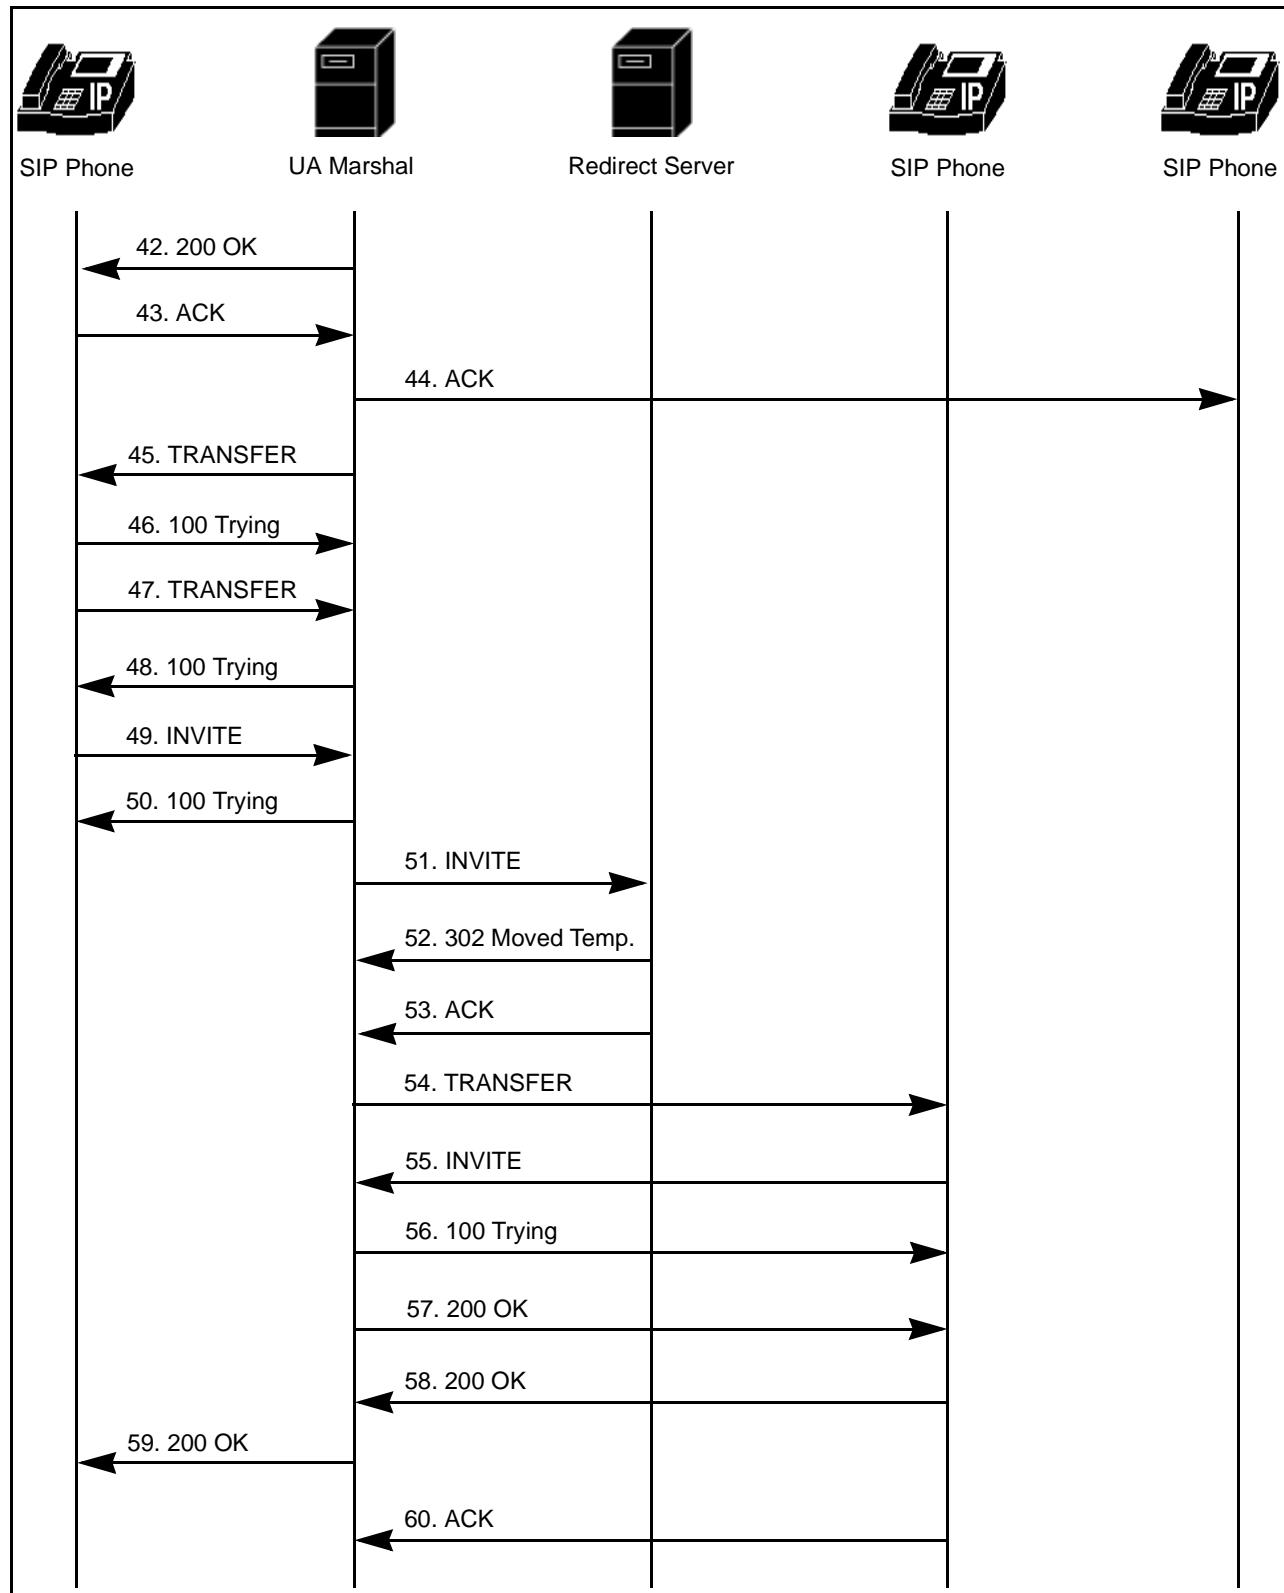

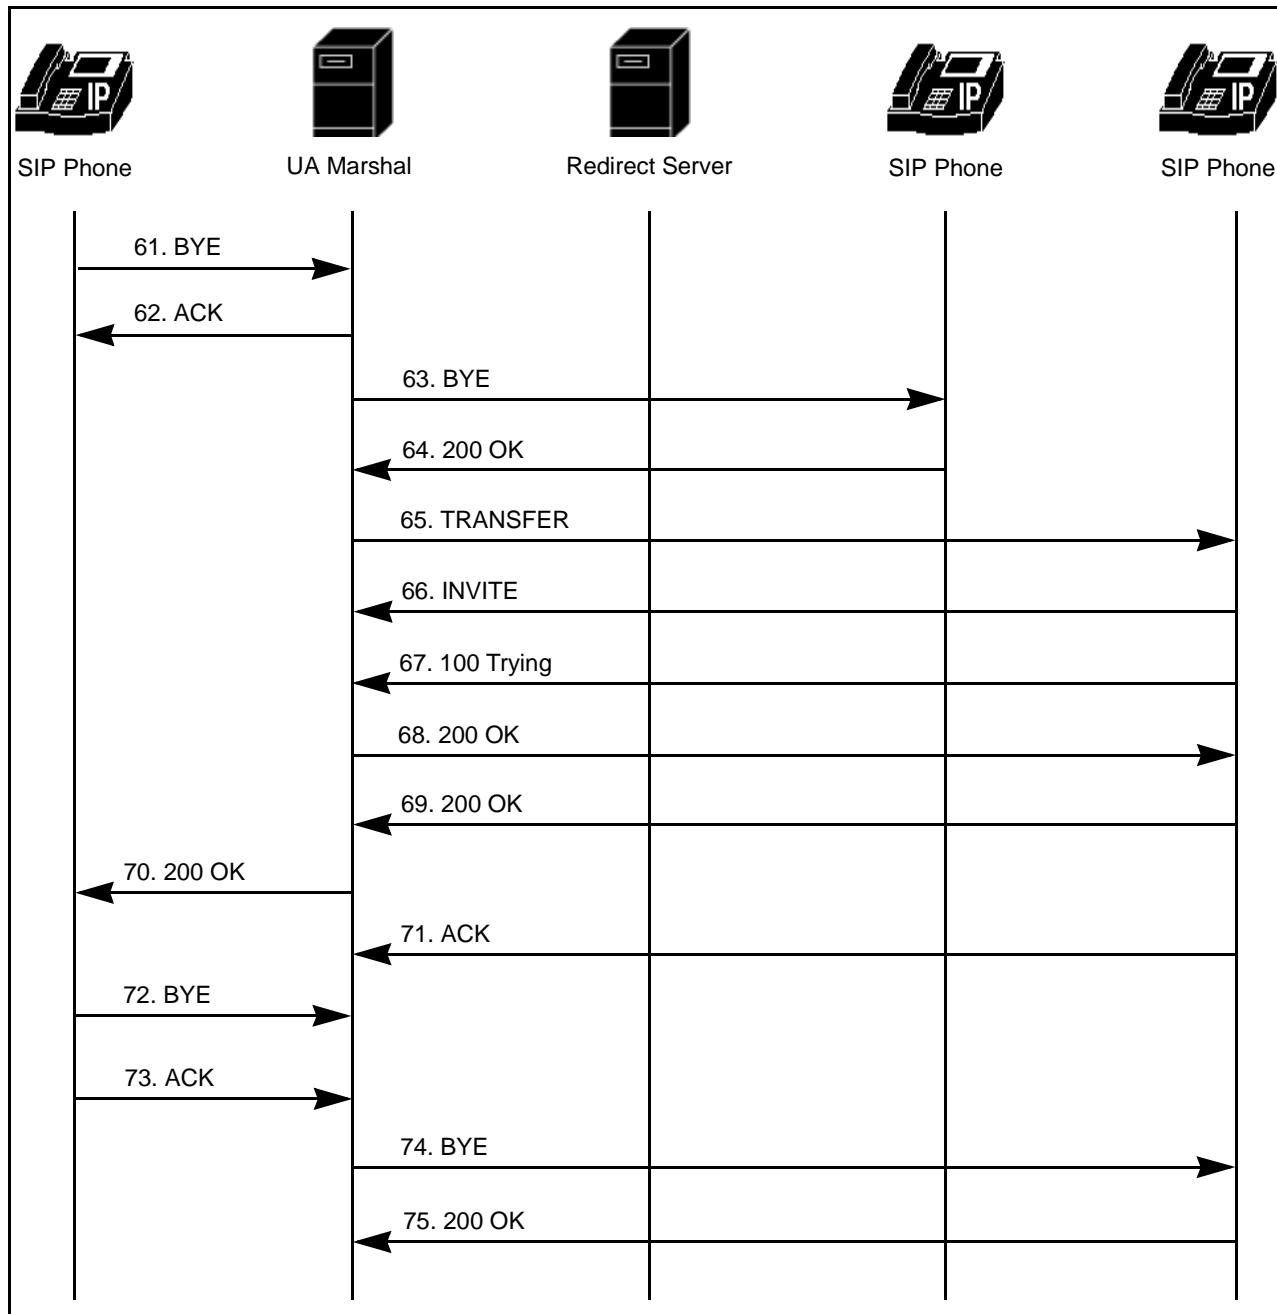

Figure C-41. User Agent to User Agent to User Agent: Ad Hoc Conference Call: Disconnect Last Party — Diagram 3

*Figure C-42. User Agent to User Agent to User Agent: Ad Hoc Conference Call: Disconnect Last Party — Diagram 4*

## Ad Hoc Conference Call Between User Agents

### Call Trace

The following call trace shows an ad hoc conference call between three users.
